**\*\* Warmer and Drier – Limited RH Recovery...Possibly Dropping Overnight \*\***

**Weather Discussion:** High pressure aloft continues to build over California, with very warm and dry conditions. Very dry air will slowly sink over ridges during the overnight hours and likely cause extremely dry conditions overnight, but with breezy ridge winds tonight. **Expect poor to no ridgetop/upper slope RH recovery the next few nights...lowest RH could be in AM.** The drying offshore pattern changes to onshore Sunday, when a surge of S-SW winds up the coast may bring return to rather breezy onshore flow.

## WEATHER FORECAST for Today:

	Ridgetops / Upper Slope	Valleys / Lower Slopes
<b>Weather</b>	Mostly Sunny (High Clouds)	Mostly Sunny (High Clouds)
<b>Highs</b>	73 – 83 ( <i>up 3</i> )	86– 92 ( <i>up 2-3</i> )
<b>Min RH</b>	5 – 12% ( <i>down 2-3%</i> )	8 – 13% ( <i>down 2-3%</i> )
<b>20 ft Winds</b>	Winds NW-E 5-8 mph with gusts to 15 mph, decreasing during afternoon	Upslope winds 3-5 mph becoming up-valley 5-8 mph with afternoon gusts 15 mph
	Coastal ridge becoming SW 4-7 mph with afternoon gusts 10-15 mph	E-NE winds 8-10 gusting 15 mph lower elevations in Arroyo Seco and Willow Creek
	Coastal/Molera – E 3-4 mph...late morning increasing NNW 10 mph gusting 15 mph	

**Marine Layer:** No marine layer

**Haines:** 4

**WEATHER FORECAST for Tonight:** Mainly clear; remaining very dry on ridgetops with lowering RH overnight. RH lowering to 5-10% upper slopes and ridges...otherwise, Max RH 40-50%. Lows mainly in the 40s, except 60 ridges. Down-drainage winds 2-5 mph.

## OUTLOOK for Sunday:

<b>Weather</b>	Sunny. Warm and still dry, but shifting to onshore flow.	
<b>Highs/Lows</b>	Coast: 65-73° Ridges: 72-80° Valleys: 84-89°	Lows 35-45°...except 60° ridges.
<b>Min/Max RH</b>	Min: 10-15% (during AM on ridges), except 35-45% immediate coast.	Max: 15-20% ridges (during PM). 35-45% valleys and 65-75% coast.
<b>20 ft Winds</b>	Valleys: Upslope winds 3-5 mph becoming up-valley 5-8 mph with afternoon gusts 12-16 mph. Ridges: E winds 6-9 gusts 13 mph, shifting after 1000-1200 SW 15 mph gusting 25 mph.	
	Coastal/Molera – SE 2-6 mph early, becoming S 8-10 mph with gusts to 15 mph by midday.	

**EXTENDED FORECAST for Monday through Thursday:** Steady cooling trend will occur through Wednesday with only slight humidity increases. Winds will become more onshore as the ridge breaks down and a moist atmospheric river tries to dig south toward central California. **A couple of weak waves may hint at a chance of precipitation the latter half of the week.** W to NW winds will likely increase with these waves. The area will likely become wet if the jetstream can shift into northern-central California.

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 76	TYPE OF FIRE Wildfire
FIRE NAME: Soberanes Fire	OPERATIONAL PERIOD 10-8-2016 24 HOUR SHIFT
DATE ISSUED 10-7-2016	TIME ISSUED 1700 HOURS
UNIT CA-BEU-003422	SIGNED <i>/s/ Josh Lichamer</i> FBAN (T)

## INPUTS

\*\*\*Review Weather Forecast for details\*\*\*  
Warmer and drier. Limited RH recovery. Gusty winds.

## FIRE BEHAVIOR

### GENERAL

Current fuel conditions will support active fire spread. Resources responding to new initial attack or fire outside containment lines should expect resistance to control. Live fuel moistures remain extremely low due to drought conditions and will take time to fully recover. Forecasted ERC 75 (90<sup>th</sup> percentile), BI 90.

**Optimal Alignment - Peak Burning Conditions**  
POI = 85 - 90%    Spotting Distance= up to ½ Mile.    ROS 100 + ch/h    Fine Dead Fuel Moisture = 3 %

### LOCAL THRESHOLDS – WATCH OUTS

Combinations of any of these threshold factors can greatly increase fire behavior:

Thresholds:	20' wind Over 7mph	RH Less Than 17%	Temperatures Over 98°	10hr fuel Less than 6%
-------------	-----------------------	---------------------	--------------------------	---------------------------

### SPECIFIC

- Heavy fuels will continue to burn out and may be problematic where close to the fires edge. New smokes will likely continue to be detected throughout the fire perimeter.
- Areas of concern remain in remote and inaccessible terrain.

### AIR OPERATIONS

Gusty afternoon winds expected over the ridges.

### SAFETY

A **hazard** is a situation that poses a level of threat to life, health, property, or environment. Hazards can be dormant or potential, with only a theoretical risk of harm; however, once a hazard becomes "active", it can create an emergency. A hazardous situation that has come to pass is called an incident. Hazard and possibility interact together to create risk.

**Risk** can be defined as the intentional interaction with uncertainty. **Risk perception** is the subjective judgment people make about the severity and probability of a risk, and may vary person to person.

**Safety** is the state of being "safe", the condition of being protected from harm or other non-desirable outcomes. Safety can also refer to the control of recognized hazards in order to achieve an acceptable level of risk.

## Sharing the road with a bicyclist

Each year in California, more than 100 people are killed and hundreds of thousands more are injured in bicycle collisions. Some bicycle related crashes are connected to the bicyclist's behavior, while others are due to the motorist's lack of attention.

Bicycle riders on public roads have the same rights and responsibilities as motorists, and are subject to the same rules and regulations.

Motorists must look carefully for bicyclists before turning left or right, merging into bicycle lanes, and opening doors next to moving traffic. Respect the right-of-way of bicyclists because they are entitled to share the road with you.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the RX and TX reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

## Work and Fatigue in Wildland Firefighting effects your physical and emotional state!

Wildland Firefighting is arduous work, performed for long shifts in difficult environmental conditions. The work can be dangerous due to the fire and working conditions. Heat, smoke, rolling rocks, falling snags, and other hazards threaten the worker. Fatigue can impair performance and decision making, increasing the risk of injury. Prolonged exposure to fatigue, stress, smoke, and poor nutrition has the potential to increase the incidence of upper respiratory illness, but also mental lapses.

The stress response is necessary to prepare an athlete, firefighter or soldier for a maximal effort in a physical challenge, but it can be unhealthy if it occurs too often in the wrong setting.

### Definitions:

**Fatigue**—A sense of tiredness, either mental or physical, brought on by stress (lack of sleep, physical work, nutritional inadequacies, or mental stresses). Fatigue following work or sleep deprivation is a normal state and can be reversed with adequate recovery or rest.

**Accumulated (Chronic) Fatigue**—Fatigue from which normal rest does not produce recovery. Accumulated fatigue is often caused by extended periods of stress with inadequate recovery periods, resulting in decreased productivity, compromised immune function, and reduced alertness.

Fatigued workers perform poorly and behave carelessly, tolerate greater errors, and become inattentive. They display decreased motivation, increased irritability and depression, and low morale. Accumulated fatigue is more persistent, producing a wider array of effects on performance, health, and morale than ordinary fatigue. Accumulated fatigue requires longer recovery periods than ordinary fatigue.

**Correct Nutrition, Hydration and Rest are good coping mechanisms for stress and fatigue. Make use of your down time and rest per the work/rest guidelines.**

**When you know who you are;  
when your mission is clear and you  
burn with the inner fire of unbreakable will;  
no cold can touch your heart;  
no deluge can dampen your purpose.  
You know that you are alive.**

## Suppression Repair Treatments

These Suppression Repair Treatments are to be used in conjunction with the Soberanes Suppression Repair Treatment Map.

### Dozer Line/ Firebreak

- Use small dozer and/or excavator to rehab line
- Pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak

### Wilderness Dozer Line:

- Use small dozer and/or excavator to rehab line
- When line cut through brush: pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed

### Non Wilderness Dozer Line Repair:

- If dozer line was a road before fire then maintain roadbed and drainage. Pull in berms and brush along roadside.
- If road was not present before fire then water bar, pull in berms, and disperse cut brush across fire line.

### Hand Crew

- Use hand crews to complete rehab work
- Move displaced native material (soil & duff) back onto fire line
- Pull back brush and berms and spread over the width of break
- Leave tops of felled trees attached, this will appear more natural
- Cut water bars diagonal to fire line, where natural drains occur and construct as natural as possible. If possible, at natural drain direct outlet of water into a clump of brush or rocks
- For dozer line: slash and water bars will be hand constructed

#### Trail Maintenance:

- Use small dozer (e.g., D5) and/or excavator to rehab line
- Pull back brush, berms and rocks
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%).
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak.
- Reestablish hiking trail along road prism
- Repair cross drains where segments of trail have been affected by suppression activities

#### Jeep Trail Repair:

- Reestablish drainage
