# Soberanes Fire – Safety Message

INCIDENT #CA-BEU-003422

DATE:10-19-16

TIME: 0700-1900

## Sense to exercise when around or operating heavy equipment

- Communicate with people working around you - either via two-way radios or a spotter who's been trained on standard hand signals. Never assume people know what you're going to be doing.
- Be aware, stay alert and know your equipment's blind spots - whether you're the operator or just working around it.
- Don't climb on or get off equipment while it's moving.
- Climb on and off equipment properly. Falls are still the number one cause of injury, so never jump off equipment and always use three-point contact (both feet and one hand or one foot and both hands on the holds at all times) when climbing on or off equipment.
- Make sure you've been properly and sufficiently trained on the equipment you're using by qualified, experienced people.
- Did you complete and sign the Risk Analysis form.

## Operating Heavy Equipment in the Presence of Ground Personnel

Presented by: The Windsor Consulting Group, Inc.

## Know everything about the equipment your working with.

- Height of your load
- Weight of your load
- Width of your load
- Turn radius of the load

## As the days get warmer Hydrate!

## Suppression Repair Treatments

These Suppression Repair Treatments are to be used in conjunction with the Soberanes Suppression Repair Treatment Map.

### Dozer Line/ Firebreak

- Use small dozer and/or excavator to rehab line
- Pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak

### Wilderness Dozer Line:

- Use small dozer and/or excavator to rehab line
- When line cut through brush: pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed

### Non Wilderness Dozer Line Repair:

- If dozer line was a road before fire then maintain roadbed and drainage. Pull in berms and brush along roadside.
- If road was not present before fire then water bar, pull in berms, and disperse cut brush across fire line.

### Hand Crew

- Use hand crews to complete rehab work
- Move displaced native material (soil & duff) back onto fire line
- Pull back brush and berms and spread over the width of break
- Leave tops of felled trees attached, this will appear more natural
- Cut water bars diagonal to fire line, where natural drains occur and construct as natural as possible. If possible, at natural drain direct outlet of water into a clump of brush or rocks
- For dozer line: slash and water bars will be hand constructed

#### Trail Maintenance:

- Use small dozer (e.g., D5) and/or excavator to rehab line
- Pull back brush, berms and rocks
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%).
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak.
- Reestablish hiking trail along road prism
- Repair cross drains where segments of trail have been affected by suppression activities

#### Jeep Trail Repair:

- Reestablish drainage
- Pull back brush, berms and rocks, and spread over width of jeep road
- Install tank-trap (as per indicated by READ)

#### Road Maintenance:

- Disperse or chip cut brush away from roadsides
- Maintain pre-existing road drainage

#### Repair Declined

- Private landowner has indicated that no repair should occur
- Check with Repair Group READS before travelling through this area

#### Department of Defense Dozer Line:

- No suppression repair
