OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fire during the 1st burn period was holding at 30 – 40 acres, access hampered suppression efforts and evening swirling wind events created spotting from 1/8 to 1/4 miles. Fire became established over Black Mtn, spread was terrain and fuel driven. By 1800 hrs during the 2nd burn period the fire (est1800ac) established itself in overgrown fuels that have a last recorded fire history in 1961. The fuels are grass oak woodland, various pine and pockets of brush/shrub. All fuels are having an adverse drought response with higher levels of torching and ignition receptivity, with many areas having complete consumption. ERC Values at proximal weather stations are showing near or at max levels (97%).

Fire Behavior for Optimal Alignment Receptive Fuels

Fuel Type	ROS Forward (ft/min)	ROS Lateral (ft/min)	FL (Ft)	P(i)G	Spotting
Grass Model	slow/moderate (50-70)	Slow (2-10)	2 – 7	100%	Up to 1/3 mile
Shrub Model	slow/moderate (60-80)	Slow (2-10)	6 - 16	100%	Up to 1/3 mile

Based on Hualing Chart recommendations,
direct attack will not be advisable when conditions are showing the upper levels of fire intensity.

SPECIFIC

Branch I DIV A-Z-B

Lower levels of fire activity are expected, post fire hazards with ash pits, poor footing and weakened trees should be a continuing concern for all fire fighters.

Branch II W-P-M

Fire is mid-slope slowly churning down and across slope. Retardant will start to lose its effectiveness in the early afternoon with fire activity increasing in intensity and continuing into the later PM hours. Late afternoon winds and solar alignment will increase the potential for bursts of intense fire behavior as well as fire churning through retardant lines. Rolling material and short range spotting should be expected with any free burning or torching fuels.

AIR OPERATIONS:

Any inversions should break up by 1000 hours.

SAFETY

**Assume that all trees have the potential to fall without warning.
This will be especially true with suppression efforts or fire impingement.**

Goose Incident Safety Message

16-CAFKU-010852

August 1, 2016

Driving

- ✓ Narrow roadways, dirt roads, fire impacted roads; insure adequate clearances, use spotters when necessary, use warning lights, drive defensively
- ✓ Seat Belts will be worn at all times
- ✓ Maintain safe speeds and following distances when in the communities and off road

Fuels, Fire Behavior and Weather

- ✓ Fuel moistures are near or at record lows and ERC's at record high levels – Potential for rapid fire growth and erratic fire behavior is still present
- ✓ Near Record Temperatures and low humidity, with swirling winds in canyons.
- ✓ **Hazard Trees** exist throughout the majority of the incident – Identify and Flag - Utilize qualified fallers – Work only within prescribed parameters! Refer to *IRPG pg. 22-23*

Hydration, Nutrition and Fatigue

- ✓ As personnel work more and more shifts on the line and the weather becomes warmer – Dehydration can accumulate and sneak up on you. Make sure you are staying hydrated. Minimum of ONE QUART per HOUR per person. Plan accordingly.
- ✓ Take frequent short breaks with small meals or snacks on regular intervals
- ✓ Monitor Personnel for Fatigue - Consider decreasing intervals for breaks or Increasing time – “This is a marathon; NOT a sprint!”

15. WIND INCREASES AND/OR CHANGES DIRECTION

Footing and Rolling Material

- ✓ There is a significant amount of steep and unstable terrain – watch your footing and be aware of rolling material!
- ✓ Watch your Step! – Avoid Stump Holes and Ash Pits – Ground around stump holes can collapse without warning.

PPE

- ✓ Wear all appropriate PPE – Replace damaged and worn equipment

Communications

- ✓ Ensure only using assigned frequencies and clone radios for proper program.
- ✓ Ensure communications are clear, concise and understood. Ask to repeat if unsure what was said. Know Leaders Intent at all times

Prepared By (Communications Unit)				Incident Location							
Ken Parker, COML 951-217-4482				General Location of 25130 Highway 94, Potrero, San Diego County CA							

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the RX and TX reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.
