Incident Status Summary (ICS-209)

Incident: **RYE**

Narrative:
Increased winds were experienced overnight, but there was no change in fire activity.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):
Tall Grass (2.5 feet)
Chaparral (6 feet)
Brush (2 feet)

Narrative:
Fuels are dry and with the predicted wind, fire behavior may increase.

Incident Status Summary (ICS-209)

Incident: **RYE**

<p>through Thursday with 18 to 24 hours of strong winds gusting to 50 to 80 mph. This is a significant period. The winds will then gradually weaken Friday through Sunday. Meanwhile, minimum relative humidity of 5 to 10 percent will be common through at least early next week, with widespread very poor overnight recoveries staying under 30 percent. As a result, critical Red Flag conditions will persist over most of Los Angeles and Ventura through Saturday, and possibly through Sunday in some or all of those locations. All other areas will remain in elevated fire weather conditions with locally breezy offshore flow and prolonged dry conditions. The Santa Barbara and possibly the San Luis Obispo Mountains and foothills will approach critical conditions tonight through early Friday as easterly winds strengthen. There is a chance that offshore flow and near-critical conditions will continue through the middle of next week. No rain possibilities over the next 10 days.</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 90%;"></th> <th style="width: 10%; text-align: center;">Active?</th> </tr> </thead> <tbody> <tr><td>D.
