FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 4	TYPE OF FIRE: WILDLAND
FIRE NAME: RYE	OPERATIONAL PERIOD: December 9-10 0700-0700

INPUTS

WEATHER SUMMARY: ***RED FLAG WARNING in effect through 8pm Sunday 12/9***

****Elevated Fire Weather conditions will continue through next week****

Northeast winds 10-20 mph with gusts to 35mph will continue in the area. Erratic winds will be present along ridgetops and drainages. High temp 80, Low 45, Min RH 5-10%. Expect poor overnight humidity recovery

OUTPUTS

FIRE BEHAVIOR

GENERAL: All fuels in the area are extremely dry, due to the recent heat wave in November, and long periods of little to no precipitation.

Fuels will ignite easily, with rapid growth, and long range spotting during the entire shift. Live fuel moisture levels are just above the critical percentile, with some regional areas well below the critical mark.

****ERC's have climbed to historic levels since the fire began, and are currently well above the 97th percentile****

The increase in ERC levels will greatly hamper control efforts for any new ignitions.

SPECIFIC: The fire behavior below outlines what can be expected from any spot fires and new starts in the local fire area.

GRASS: Rate of Spread.... 180 ft/min Flame Length.... 10 ft Spotting.... 1/2 mi Probability of Ignition 75%

GRASS SHRUB: Rate of Spread.... 130 ft/min Flame Length.... 10 ft Spotting.... 3/4 mi Probability of Ignition 75%

BRUSH: Rate of Spread.... 300 ft/min Flame Length.... 30 ft Spotting.... 1.5 mi Probability of Ignition 75%

Fuels are very receptive to ignition. Be cautious of work being done by heavy equipment, and parking locations.

Smoldering trees, and branches have the ability produce ember-cast and create a prime source of ignition throughout the shift. Trees and branches will release easily in windy conditions.

Sunset 12/9... 16:49 Sunrise 12/10... 06:49

AIR OPERATIONS: Transport winds will be Northeast 15mph with a mixing height of 1600' AGL. High winds will be present throughout the area hampering the effectiveness of aircraft. Erratic winds will be present over ridgetops.

Expect clear air over the area, unless a new fire develops to the East of the incident.

SAFETY

Fire weakened trees will begin to come down. Look up... and live.
On relatively small fires or deceptively quiet areas of large fires.
Stump holes will hold deep-seated heat for extended periods of time.

3. Safety Message/Expanded Safety Message, Safety Plan, Site Safety Plan:

BRIEF ALL YOUR PERSONNEL ON THE CURRENT DAYS IAP BEFORE ENGAGING IN YOUR DIVISIONAL ASSIGNMENT.

- Use caution while working in the Riparian areas. Multiple hot ash-pits have been observed in these areas. Sound the ground you plan to walk on.
- Stay aware of what is happening around you and adapt your exit strategy accordingly.
- Strong & erratic winds are predicted throughout the operational period. Any new ignition will grow rapidly & will be difficult to control.
- Establish: LOOKOUTS, COMMUNICATIONS, ESCAPE ROUTES & SAFETY ZONES.
- Be aware of complacency. Many of us have been on multiple fire assignments this year, starting as early as March. Continue to be aggressive, but look out for each other.
- No PPE allowed in the eating areas. Wash hands regularly and always before entering the eating areas.
- If personnel get fatigued, (but it's not a medical emergency), use Fireline Paramedics for evaluation and rehab in a shaded area on the fire line.
- Drive with headlights on and Slow Down.
- Use appropriate lifting techniques while lifting during backhaul of hose, trash, etc.
