Incident Meteorologist

...RED FLAG WARNING UNTIL 800 PM THIS EVENING FOR THE VENTURA ZONE...

Strong Santa Ana winds will continue today across the fire. The strongest northeast winds will occur through early this afternoon across the Ventura zone, especially in the mountains and along the Highway 126 corridor. Winds across the Santa Barbara zone will be northeast to east, but much weaker. Relative humidity will drop into the teens with poor recovery tonight, except moderate recovery near the coast and in sheltered valleys.

WEATHER FORECAST:

WEATHER: Mostly clear. Areas of smoke.
TEMPERATURES: Max: 64-72 except 57-64 ridges/upper slopes.
 Min: 48-58 except 38-48 in wind-sheltered areas.
HUMIDITY: Min: 12-25%.
 Max: 20-30% except 30-50% near the coast and sheltered valleys.

FIRE BEHAVIOR

GENERAL: THE ENERGY RELEASE COMPONENT OF THE NATIONAL FIRE DANGER RATING SYSTEM IS 93 TODAY. LIVE FUELS IN THE JESUSITA BURN AREA IS AT 60% MOISTURE CONTENT. LAST RAINFALL IN THE FIRE AREA OVER 0.10" WAS 253 DAYS AGO. PROBABILITY OF IGNITION 90% AT PEAK DAYTIME HEATING. SEE ATTACHED FUELS ADVISORY FROM SOUTH OPS. SPOTTING DISTANCE HALF MILE.

SPECIFIC:

VENTURA ZONE

BRANCH I, IV AND V

NO MOVEMENT ANTICIPATED

BRANCH III

FIRE IN SESPE ABOVE FILLMORE HAS BURNED OUT PINE CYN AND COLDWATER CYN, AND IS HOLDING AT DEVILS GATE. THE FIRE COULD STILL CROSS ABOVE DEVILS GATE IF NOT STAFFED.

BRANCH II

FIRE IS ACTIVE IN THE UPPER REACHES OF SESPE RIVER AND IN THE MATILJA WILDERNESS IN AREAS OUTSIDE THE DAY FIRE BURN FOOTPRINT. FIRE IS ABOUT TO MOVE INTO THE 2002 WOLF FIRE BURN AREA, AND WILL SLOW DOWN BUT CONTINUE TO MOVE.

SANTA BARBARA ZONE

BRANCH XX

FIRE HAS MOSTLY BURNED OUT THE INTERFACE IN THIS BRANCH. ORNAMENTAL VEGETATION AROUND STRUCTURES REMAINS A HAZARD

BRANCH XXI

FIRE WILL MOVE Laterally across the front of the Santa Ynez range as the SUNDOWNER subsides. FUELS IN THE JESUSITA BURN HAVE RE-GROWN ENOUGH TO CARRY FIRE. MIDSLOPE PORTIONS OF GIBRALTAR RD. ARE A HAZARD WITH FIRE BELOW.

BRANCH X

NORTHEAST WINDS AT THE RIDGETOPS THREATEN TO MOVE THE FIRE FURTHER WEST INTO THE SANTA YNEZ RIVER CANYON.

AIR OPERATIONS:

HEAVY SMOKE AND TURBULENCE DOWNWIND OF FIRE ACTIVITY CAN DIMINISH AIR OPERATIONS

SAFETY

- LOOK OUT FOR AREAS THAT BURNED SO QUICKLY IN THE WIND DRIVEN FIRE FRONT THAT THEY CAN STILL REBURN.
- EXERCISE CAUTION WHEN ATTACKING SPOT FIRES. THEY ARE DEVELOPING RAPIDLY. DO NOT GET ABOVE THEM.
- SAFETY ZONES FOR INDIRECT ATTACK NEED TO BE LARGE IN THESE BURNING CONDITIONS

Fuels and Fire Behavior Advisory

Southern California Geographic Area Coordination Center

December 15, 2017

Subject: The combination of the lack of precipitation, along with a prolonged period of warm, dry, and windy weather has caused fuels to be at record dry levels across portions of Southern California.

Discussion: With the absence of any significant precipitation this fall, fuels have become critically dry across much of Southern California. In addition, there has been a prolonged period of warm, dry, and windy weather which has worked in concert with the lack of rainfall to produce catastrophic wildfires. The Thomas Fire is now nearing the top of the list of largest fires in California history. This would be very significant if it were summer, but it is absolutely unprecedented in December, and it serves as a testimony to the extreme volatility of the fuels.

The combination of critical fire weather and dangerously dry fuels has caused extreme fire behavior to occur on recent incidents. Also, the abundant grasses from last winter's plentiful rains have resulted in heavy fuel loading which has greatly contributed to the rapid rates of spread being observed on recent fires.

Little change in the overall weather pattern is expected through the end of the year with the continuation of warm and dry weather with periods of Santa Ana winds. Fuel are expected to remain highly receptive to new ignitions with the potential for new large fires during windy conditions.

Difference From Normal Conditions: Dead fuels away from the coast in Southern California are either at, or are near all-time record dry levels. The 100-hour dead fuel moisture is normally in the mid-teens, but values of around 2% have been commonly observed across the Angeles, San Bernardino, and Cleveland national forests, as well as over the southern portions of the Los Padres National Forest. Live fuel moisture by this time of year would normally start to recover from the minimums typically reached in early October. However, moisture levels in much of the native vegetation have either remained steady, or have drifted downward.

The fire behavior that has been observed on the Thomas Fire as well as some of the other recent fires has been extreme. Fires are actively backing downhill and into the wind in both the fine dead fuels as well as in the heavier chaparral. Fires have exhibited extremely high resistance to control, and retardant in many cases has proven to be ineffective.

Concerns to Firefighters:

- Fires will be uncontrollable during windy episodes.
- Extreme rates of spread with both long and short range spotting can be expected on any new or existing fires with active burning at night.
- Stagnant weather patterns and long duration fires can lead to complacency.

Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- PPE, including shrouds and eye protection shall be utilized during suppression operations.
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- **Base all actions on current AND EXPECTED behavior of the fire.** Augment initial attack resources as incident activity dictates.

Area of Concern: This advisory is valid through 12/29/2017 for the following PSAs... **South Coast (SC08), Western Mountains (SC09), Eastern Mountains (SC10), and the Southern Mountains (SC11).**

Issued: December 15, 2017 (Note this advisory will be in effect for 14 days and will be reviewed/updated at that time.)

Santa Barbara County Fire Information Line: 800-400-1572

Media Line: 805-377-4860

MEDIA

California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot, or civil disturbance. Properly identified members of the news media should not be restricted from entering the locations specified within the code, even if the area presents a danger to them. Media members should be advised of the nature of possible danger. Members of the media do not have the right to access crime scenes or any area where their presence may interfere with incident operations, mitigation or evidence collection.

- The media may only access private property with the property owner's permission. Fire personnel cannot provide members of the media with authorization to enter private property.
- If approached and questioned by the media and/or the public, talk about your assignment or task at hand. If need be, direct the questioning party to the incident PIO.
- Do not speculate or give opinions
- There is no such thing as an "off the record" comment.

CAL FIRE SOCIAL MEDIA POLICY (Social Media 0691)

Social Media is increasingly being used by public agencies and the media as well as the public. This form of communication continues to grow rapidly in order to supply the public's desire for instant information gratification. All personnel assigned to a CAL FIRE incident will adhere to the CAL FIRE Social Media Policy. Further information about the CAL FIRE Social Media Policy can be obtained from the Information Officer. If you are uncertain, please ask. **Do not post:**

- Inappropriate information, pictures or videos
- Opinions regarding the incident or policy
- Endorsements of any kind

PICTURES AND VIDEO OF INCIDENT

We are in a new era of media. Media no longer means the news/broadcast industry but now refers to anyone that has the capability to shoot video and or photographs and post them onto social media in a matter of minutes. Unfortunately we have seen some instances of video or photographs that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could have unwanted effects. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera can't be looking up, down and all around.

LOST AND FOUND

The Information staff will manage *Lost and Found* items for the incident. If you have lost an item, leave your contact information and what you have lost at the Santa Rosa Hall. If you have found an item on the incident, bring the item to the Santa Rosa Hall.

FIRE SUPPRESSION REPAIR PLAN THOMAS FIRE: CA-VNC-103156

Fire Suppression Repair is the repair of damage caused directly by fire suppression activities. It is not the repair of areas damaged by the fire activity itself such as burned material and secondary damage such as falling trees or erosion from hydrophobic soils. We are responsible for repairing only the damage caused by fighting the fire. We are also not responsible for upgrading facilities beyond their pre-fire condition.

Instructions for suppression repair during mop-up

While performing mop-up operations dozer or excavator operators will install waterbreaks on all dozer lines while dozers will install waterbreaks on secondary access roads. Dozer lines amongst the structures shall have the berms pulled and waterbreaks installed where necessary with hand crews to minimize the impacts on residents. Hand crews will install waterbreaks on all handlines, and waterbreaks on dozer lines situated on extremely steep slopes may also need to be installed by hand crews.

Scattered trash shall be collected and deposited in trash piles. Trash piles will be removed and placed at drop points either before or while hose lays are collected. Police your areas and clean them up as events wind down.

Inventory and Mapping

Suppression overhead and other personnel will document repair needs and their location. This information will be given to the Fire Suppression Repair Branch. **ORANGE** flagging/**ORANGE** spray paint or Green on White Polka-Dot flagging will be used to designate area in need of repair. The type of repair/instructions will be written directly on the flagging for ease of use.

Objectives

- Install waterbreaks while crews and dozers are actively onsite on roads, trails, and handlines damaged by fire suppression.
- Waterbreaks shall have proper angle and open outlets to insure effective drainage.
- Repair damaged fences (remember, those portions damaged by suppression efforts, not by the fire itself).
- Restore barriers on roads that were previously closed but opened for suppression activities.
- Insure that drainage is provided at crossings, ditch drains, remove deposited material, and stabilize approaches.
- Report any damage or damages mitigation to the Fire Suppression Repair Group.
- Complete all repair work as determined by the Fire Suppression Repair Specialist prior to final demobilization.

Firelines/Existing Fuelbreaks/Staging Areas/Safety Zones/Heliports/Drop Points

- Remove debris deposited during suppression activities, including flagging and signs.
- Install waterbreaks where necessary for erosion control.
- Pull berms back onto disturbed areas, except in areas identified as needing a berm to serve as a barrier for roads/trails.
- Spread brush across the disturbed areas to provide ground cover and a seed source.

- Masticators/excavators/dozers with brush rakes or grapples will be utilized on existing fuelbreaks utilized during suppression efforts to reduce any excessive fuel loading.

Roads

- Clean culverts and drainage facilities plugged with soil and debris deposited during suppression activities.
- Re-establish cross drains and drainage if removed or made inoperable by suppression activities.
- Use cut brush – if available and nearby – to block off potential OHV access.
- Remove outboard berms created during suppression activities and incorporate into the road surface.

Watercourses

- All slash; soil and debris deposited into watercourses during suppression activities shall be removed.
- All loose soil must be pulled away from the watercourse and stabilized (graded smooth, and slash packed for cover).
- If excavated, the stream channel will be wider than the natural channel and set to natural grade. The approaches to the crossing will be sloped back to prevent stream bank failure.

Sensitive Resource Areas

Equipment shall not go into Sensitive Resource Areas unless the operator is closely supervised by an Archaeologist or Fire Suppression Repair Specialist. Sensitive Resource Areas have been flagged by the resource personnel with Green and White Polka-dot flagging . Sensitive Resource Areas may be delineated in the field with several types of flagging colors and designs, but generally flagging that appears to be encircling a given feature must be avoided. Known flagging schemes are as follows: Equipment operators should contact a suppression repair field representative before beginning conducting operations if questions regarding a flagged locations are encountered.

Waterbreaks/Waterbar/Cross Drain spacing

Line or Road Gradient (%)	0-10%	11-25%	26-50%	50%+
Spacing	200 ft.	100 ft.	75 ft.	50 ft. (25' on Federal land)

Waterbreaks shall be cut diagonally with a minimum depth of 6” into existing grade with a 12” berm for a minimum height of 18”. Waterbreaks will be installed at a 30-45 degree angle. Outlets shall be open and directed into non-erodible material.

Conflicts with Suppression Activities

Postpone repair activities that hamper access or other suppression actions. The location of needed repair actions shall be noted and relayed to the Fire Suppression Repair Group. DO NOT compromise fire lines by spreading flammable material across them.

Water Bar Spacing and Guidelines

Fireline slope %	Maximum Distance Apart (feet)
1-6	300
7-9	200
10-14	150
15-20	90
21-40	50
41-60	25

Recommended spacing for waterbars on firelines.

Waterbars should be no further apart than this, but they may be closer. When in doubt, put in more. From: UDSA-Forest Service, "Sale Administrator's Handbook"
