INCIDENT Weather Forecast

FORECAST NO: 20 NAME OF FIRE: Thomas

PREDICTION FOR: 24 hour SHIFT
SHIFT DATE: 12/26/17-12/27/17

SIGNED: Kurt Van Speybroeck
Incident Meteorologist

TIME AND DATE
FORECAST ISSUED: 12/25/17 @ 1900

The ridge over Southern California will weaken slightly today as a weak wave passes through the north of the Thomas Fire. The biggest impact from this subtle change will be a slight increase of winds from the north and northeast. A slight on shore gradient may develop and allow for some better RH recovery... but it will only be slight and temporary. High temperatures are expected to be roughly about the same as the past few days... and overnight RH recovery is expected to be generally poor. A warming trend is expected to begin on Wednesday as the surface ridge strengthens and persists into the weekend..

The extremely dry air mass and warm temperatures expected over California will maintain elevated fire threat conditions through the week. Rainfall is not expected through the end of 2017.

INPUTS

WEATHER SUMMARY: Continued Very Dry
 Temps: Day 63-70 Front Country/ 58-65 Ridges-Upper slopes Night 42/48 Front 38/44 Ridges
 RH: Day Front Country 12-19% and 25-30% Ridges and Upper slopes Night 30-35%
 Winds: Mainly North to NE 3-9mph with gusts 17mph
 ERC is 76 at Rose Valley New 90th percentile

OUTPUTS

GENERAL:
 Fuels in the fire area remain critically dry. With the short days and lack of significant wind, minimal to no forward fire progression is expected. With five days of poor RH recovery, you continue to see visible smoke and active fire within the fire perimeter as green islands burn out. The fire will be most active after about 1300hrs until sundown. Cloud shading will diminish fire behavior.
 Areas with the most potential for fire spread are those areas with continuous one hour (grass/needle cast) fuels. Identify these areas in your assigned work location.
 If any spotting occurs it will be short range or from rollout. Pig 60%
 With the broken topography and intersecting drainages watch out for fire whirl development.

SPECIFIC:
 Ventura Zone/Branch II
 No forward fire spread is expected. Heat remains in Bear Haven and expect to see some smoke in this area. Heat also remains in the Cherry Creek and Tule Creek drainages, expect active interior burning. With the incomplete consumption of fuels from the previous burning near Hartman Ranch, expect interior islands to continue to burn out. Pockets of timber will continue to hold fire and some torching should be expected.
 Santa Barbara Zone/Branch X
 No forward fire progression is expected in the Santa Barbara Zone. Expect to see some interior pockets of smoke but the fire will not challenge containment.
 No significant fire activity expected tonight in the absence of wind.

AIR OPERATIONS: Clear Skies and minimal winds, VFR conditions

SAFETY

Remember tragedies often occur on quiet sections of line! There is still heat out there.
