OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fuels in the fire area remain critically dry. With the short days and lack of significant wind, minimal to no forward fire progression is expected. You will continue to see visible smoke and active fire within the fire perimeter as green islands burn out. The fire will be most active after about 1300hrs until sundown. Cloud shading will diminish fire behavior.

Areas with the most potential for fire spread are those areas with continuous one hour (grass/needle cast) fuels. Identify these areas in your assigned work location.

If any spotting occurs it will be short range or from rollout. Pig 60%

With the broken topography and intersecting drainages watch out for fire whirl development.

SPECIFIC:

Ventura Zone/Branch II

No forward fire spread is expected. Heat remains in Bear Haven and expect to see some smoke in this area. Heat also remains in the Cherry Creek and Tule Creek drainages, expect active interior burning. Expect interior islands to continue to burn out. Pockets of timber will continue to hold fire and some torching is probable.

Santa Barbara Zone/Branch X

No forward fire progression in the Santa Barbara Zone. Some interior pockets of smoke may be visible but the fire will not challenge containment.

No significant fire activity expected tonight in the absence of wind.

AIR OPERATIONS: Clear Skies and minimal winds, VFR conditions

SAFETY

Remember tragedies often occur on quiet sections of line! There is still heat out there.

Objectives - The objective of the fire suppression repair is:

- Reduce the potential for soil erosion and sedimentation
- Reduce the visual impacts of fire line as well other suppression activities when feasible
- Repair roads and drainage structures to a functioning condition
- Protect natural and cultural resources from additional potential damage

Critical Guidelines

Sensitive Sites are marked with Orange and White “Special Treatment Zone” flagging.

Back-haul all trash and un-needed flagging. Please leave safety flagging in place.

On Firelines, waterbars should be installed as described below, fire line covered with slash, and entrances blocked.

Line

Fire line Gradient (% slope)	Distance Between Waterbars (A) (feet)	Think 5-D System		
0-10	None	Distance	Reduce the distance water can run in a straight line Don't bully the flow, lead it away Move the water off the fireline Good water bar is not a dam – must have open outlet. Water should spread out from outlet like a shower not a fire hose.	
10 to 15	150	Diagonal		
15 to 30	100	Diverit		
30 to 40	50	Discharge		
Over 40	25	Dissipate		

- These are guidelines and are not intended to restrict the implementation of more or less water bars if the need or lack of need is justified.
- Firefighter safety should be taken into account, if slopes are too steep for safe implementation then waterbars should not be constructed, if sensitive resources are not present.

DEPTH AND WIDTH: Waterbars need to be cut into surface, do not simply push up soil. They should be deep enough to redirect the water from expected rain to area.

Safety Zone, and Staging Areas: These fire suppression activity areas should be repaired to standards similar to fire line repair. Waterbars place where appropriate. Use cleared vegetative material, and slash for soil cover

Watercourses: Work with READs to determine appropriate repair needs. Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

Water Drafting Sites: Water sources developed as a water draft site are to be restored to a condition resembling pre fire use. Remove any dams, dikes, or other impoundments that were created for fire suppression activities.

Medical Incident Report

FOR ALL MEDICAL EMERGENCIES: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use items one through nine to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS/DISPATCH
Ex: "Communications, Div. Alpha, Stand-by for Priority Medical Incident Report." (If life threatening request designated frequency be cleared for emergency traffic.)

2. INCIDENT STATUS: *Provide incident summary and command structure.*

Nature of Injury/Illness	<i>Describe the injury (Ex: Broken leg with bleeding)</i>
Incident Name	<i>Geographic Name + "Medical" (Ex: Trout Meadow Medical)</i>
Incident Commander	<i>Name of IC</i>
