INCIDENT Weather Forecast

FORECAST NO: 23

NAME OF FIRE: Thomas

PREDICTION FOR: 0700-1900 DAY SHIFT
SHIFT DATE: 12/29/2017

UNIT: CalFire-VNC

SIGNED: Kurt Van Speybroeck
Incident Meteorologist

TIME AND DATE
FORECAST ISSUED: 12/28/2017 @ 1900

The ridge over Southern California will persist today with a warming and drying trend continuing across the Thomas Fire. Daytime maximum temperatures will increase between 15 and 20 degrees above normal. A return of off shore gradient winds will also usher in a return to very dry conditions with RH recovery is expected to be generally poor.

The extremely dry air mass and near record to record temperatures expected over California will maintain elevated fire threat conditions through the week. Rainfall is not expected through the end of 2017.

WEATHER FORECAST:

WEATHER: Mostly sunny.

TEMPERATURES: Max: 78 - 85 except 70 - 79 ridges/upper slopes.
Min: 54-62 coast, 48-54 ridges and upper slopes.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fuels in the fire area remain critically dry. With the short days and lack of significant wind, minimal to no forward fire progression is expected. You will continue to see visible smoke and active fire within the fire perimeter as green islands burn out. The fire will be most active after about 1300hrs until sundown. Cloud shading will diminish fire behavior.

Areas with the most potential for fire spread are those areas with continuous one hour (grass/needle cast) fuels. Identify these areas in your assigned work location.

If any spotting occurs it will be short range or from rollout. Pig 60%

With the broken topography and intersecting drainages watch out for fire whirl development.

SPECIFIC:

Ventura Zone/Branch II

No forward fire spread is expected. Heat remains in Bear Haven and expect to see some smoke in this area. Heat also remains in the Cherry Creek and Tule Creek drainages, expect active interior burning. Expect interior islands to continue to burn out. Pockets of timber will continue to hold fire and some torching is probable.

Santa Barbara Zone/Branch X

No forward fire progression in the Santa Barbara Zone. Some interior pockets of smoke may be visible but the fire will not challenge containment.

No significant fire activity expected tonight in the absence of wind.

AIR OPERATIONS: Clear Skies and minimal winds, VFR conditions

SAFETY

Remember tragedies often occur on quiet sections of line! There is still heat out there.

Thomas Fire Safety Message

December 29 2017
0700-1900 Day Shift

Good Attitudes are infectious!

Keep a good attitude that promotes a healthy work environment

Rehab can yield hidden hazards, don't get tunnel vision

New task? New brief, Perform a tailgate brief for every new assignment!

Conduct AAR's at end of shift this is the best cohesion builder for learning from all lessons from the day!

- **“Situational Awareness”** means seeing what occurs around you with your eyes and your mind. That is seeing what happened, what is happening and what might happen. It is critical thinking for today's mission.
- **To reach our goal of no serious injury, we need everyone to do their job and to help their neighbor.**

Summary of Suppression Damage Repair Guidelines

Objectives - The objective of the fire suppression repair is:

- Reduce the potential for soil erosion and sedimentation
- Reduce the visual impacts of fire line as well other suppression activities when feasible
- Repair roads and drainage structures to a functioning condition
- Protect natural and cultural resources from additional potential damage

Critical Guidelines

Sensitive Sites are marked with Orange and White “Special Treatment Zone” flagging.

Back-haul all trash and un-needed flagging. Please leave safety flagging in place.

On Firelines, waterbars should be installed as described below, fire line covered with slash, and entrances blocked.

Line

Fire line Gradient (% slope)	Distance Between Waterbars ^(A) (feet)	Think 5-D System	
0-10	None	Distance	Reduce the distance water can run in a straight line
10 to 15	150	Diagonal	Don't bully the flow, lead it away
15 to 30	100	Divert	Move the water off the fireline
30 to 40	50	Discharge	Good water bar is not a dam – must have open outlet.
Over 40	25	Dissipate	Water should spread out from outlet like a shower not a fire hose.

- These are guidelines and are not intended to restrict the implementation of more or less water bars if the need or lack of need is justified.
- Firefighter safety should be taken into account, if slopes are too steep for safe implementation then waterbars should not be constructed, if sensitive resources are not present.

DEPTH AND WIDTH: Waterbars need to be cut into surface, do not simply push up soil. They should be deep enough to redirect the water from expected rain to area.

Safety Zone, and Staging Areas: These fire suppression activity areas should be repaired to standards similar to fire line repair. Waterbars place where appropriate. Use cleared vegetative material, and slash for soil cover

Watercourses: Work with READs to determine appropriate repair needs. Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

Water Drafting Sites: Water sources developed as a water draft site are to be restored to a condition resembling pre fire use. Remove any dams, dikes, or other impoundments that were created for fire suppression activities.
