Steep winding roads are throughout the incident. Slow down when driving on loose gravel and blind curves. Drive defensively with headlights on and use hands free devices.

Working on steep, uneven terrain. Be mindful of rolling materials.

Ensure radios are properly programmed for today's IAP and that crews are trained in communications procedures for the incident.

Maintain situational awareness. Look up, Look down, Look around

Stay hydrated!!! Time to think = time to drink. Document rest and hydration on 214.

Remain mindful of what is going on around you! LCES!

HEADS UP!!! Lookout for SNAGS when working around areas with burned trees. Evaluate all wind damaged trees with large limbs before working under around them.

Avoid complacency!!!! Experiencing extreme fire behavior due to low live and dead fuel moistures, persistent drought, and elevated fire danger rating values.

Interior areas will continue to see high temperatures of 95 to 105 degrees, similar to Saturday, with an increased risk for deep vertical plume growth with a new fire starts. Minimum humidity values will vary between 5 and 15. Foothill areas will see poor overnight humidity recoveries well below 30 percent with low temperatures as high as 80. West to north wind gusts between 20 and 40 mph are also expected, strongest over the interior areas each afternoon, and over the I-5 Corridor and southern Santa Barbara County each night. All of this will result in elevated fire weather conditions through Sunday over the interior. Brief and localized critical conditions are expected over the windiest mountain areas of all four counties, as well as the Antelope Valley.
