FIRE WEATHER FORECAST

FORECAST NO: 6

PREDICTION FOR: Sept 23-24, 2020 0700-0700

INCIDENT NAME: West Castle Zone

UNIT: CA-SQF

SIGNED: Andrew Gorelow

TIME AND DATE

FORECAST ISSUED: Tue, Sep 24 @ 1800 hours

Incident Meteorologist - Andrew Gorelow

WEATHER DISCUSSION: Conditions are expected to be more stable today along with lighter winds aloft. This may help keep more smoke trapped over the fire through the afternoon making conditions poor for visibility and air quality. Although there is expected to be some eastward smoke movement above the fire, overall winds will be lighter. Surface winds will be light and terrain driven. After marginal overnight RH recoveries look for RHs to drop into the upper teens to mid-20s with high temp generally from the mid-70s to mid-80s. If smoke is trapped over the fire through the day then RHs will remain higher with lower afternoon temperatures.

SKY/WEATHER TODAY (WEDNESDAY): Sunny, but smoky. Conditions are expected to be more stable today allowing for less mixing through the afternoon. This may help keep smoke trapped in the valleys and the inversion remaining in place. Although winds aloft will be lighter, there will still be some eastern movement of smoke. Overall, winds will be terrain driven through the day with a general west flow at the ridges. RHs dropping into the upper teens to mid-20s. With the more stable conditions there is a lower chance of plume development.

FIRE BEHAVIOR FORECAST TYPE OF FIRE: FORECAST NUMBER: 8 WILDFIRE OPERATIONAL PERIOD: 9/23-9/24/20 0700-0700 WEST CASTLE ZONE FIRE NAME: CASQF-002541 TIME ISSUED: 1900 DATE ISSUED: 9/22/20 **SEQUOIA NATIONAL FOREST** UNIT: SIGNED: Typed/printed: Hugh Scanlon FBAN **INPUTS**

WEATHER SUMMARY:

Sunny, but smoky. Stable atmosphere for poor smoke dispersion. Temperatures will range from the low 70's to mid 80's. Minimum humidity will be 18 to 25%. Winds will be diurnal, following the main drainages. Above the fire, winds will be West 5 mph in the afternoon. Visibility improving late afternoon. The overnight humidity recovery will range from 30-40%.

OUTPUTS

FIRE BEHAVIOR

FUEL MODEL	RATE OF SPREAD FT/MIN	FLAME LENGTH FT	SPOTTING DISTANCE	PROBABILITY OF IGNITION
GRASS	50-100	5-7	.10 mi	90%
BRUSH	80-125	18-20	.30 mi	90%
TIMBER/LITTER	4-10	2-4	.30 mi	60%

GENERAL:

Live fuel moistures are low, with the area in moderate drought. ERC's are forecast above the 97th percentile in the highest elevations. The inversion keeps fire activity in check. Stable air will restrict movement of the smoke. Expect visibility to improve by late afternoon. Active ground fire is common throughout the interior islands. Lower overnight humidity and dry conditions lead to early active burning. Firing operations becomes effective at RHs below 45%. Fire spread will tend to the east.

SPECIFIC:

Branch XXI – Conditions will be favorable for holding and mopup. Roll out remains a threat on the steep slopes. Active ground fire into fuel jackpots will flare up, with short range spotting.

Branch XXV – Favorable conditions for burning, holding, and mop up. Aviation dependent firing operations may be adversely impacted by poor visibility. Burning material on steep slopes can easily roll out across control lines and will initiate spot fires. The fire is backing down the southern portion of Dennison Mtn and is within a mile of the proposed control lines by the NF Tule River.

Branch XXIX – Fire movement will be east inside Sequoia NP. Fire will continue to back down from Dennison Mtn and has been checked up above Garfield Creek by helicopter bucket work, which is unlikely to happen today due to smoke. The surface fire progression does not favor fire reaching the SF Kaweah River in the next shift, however burning will produce a significant column, which will shade to the east.

AIR OPERATIONS: Limited visibility due to smoke and inversion layers. Visibility should improve by 1300.

SAFETY:

High Probability of Ignition is a key measure of spot fire potential. Expect short range spotting around recently burned areas with heavy fuels in the black. Monitor the POI so you know what to expect.

Task: Maintain readiness and structure protection in: Bonita Meadow, West Meadow, Beach Meadow and Blackrock Work Center. Recon and develop a structure protection plan for Monache. Continue to go direct with crews and equipment on eastern finger of fire north of Beach Meadows. Monitor DIV N from the air and utilize air resources as needed to keep green islands from impacting control lines. Assist with point protection as needed.

Purpose: Limit impact to values at risk.

End State: Values at risk are not impacted by fire. A plan to protect values at risk is developed for the Monache area. The spread of fire to the south and east is limited in divisions L/N.

- A/G Tac for Branch Five: RX169.200, TX 169.200. This needs to be hand programmed.
- Personnel to notify DIVS of potentially sensitive cultural materials.
- Castle Ambulance 3 staged at Whitsett Base Camp. Castle Ambulance 2 staged at the Blackrock Ranger Station. REMS available to all divisions.
- Prioritization of all control or containment actions taken during the operational period in this Division will be at the discretion of the DIVS. Actions may have to be taken by the DIVS that are not enumerated in today's IAP. These actions would be a result of a significant change in actual or expected fire behavior over and above that anticipated at the time the IAP was prepared. These actions will be coordinated with and approved by the OSC whenever possible.

DEMOBILIZATION PLAN - SUMMARY

GENERAL INFORMATION

The Demobilization Plan is developed to facilitate the orderly removal and checkout of resources on the incident. Surplus Personnel are available for release if they have rested for a minimum of 8 hours, are cleaned up, outfitted and have a vehicle ready to depart to their next destination.

GENERAL GUIDELINES

- o NO RESOURCES WILL LEAVE THE INCIDENT UNTIL AUTHORIZED TO DO SO BY THE DEMOB UNIT.
- Efforts will be made to ensure that all released personnel arrive at their destination prior to 2200 hours.
- All Resources will arrive at the Demobilizations Unit at their scheduled time Only.
- All government and hired vehicles leaving the incident will have a safety inspection. If a vehicle is within 1,000 miles of a
 "B" service, it is the responsibility of the resource to contact Ground Support and have an oil change prior to their
 scheduled demobilization time.
- All Rental Vehicles will receive a safety inspection prior to leaving the incident.
- All trainees are to keep their time up to date and report to the Training Specialist with their task books and evaluations prior to completion of the demobilization process.
- All strike team leaders are responsible to call **South Ops at 1-800-237-3703** immediately upon being released from the incident

RESPONSIBILITIES

Unit Leaders will declare resources excess to their Section Chief. Section Chiefs will declare excess resources to the Planning Section Chief through the Resource Unit Leader. This should be done 36 hours in advance of anticipated release. Use the Declaration of Excess Resources sheet or General Message Form (ICS-213) to list all excess resources. Include the resource name, request number, name of person, date and time of declared excess, and time in which the resource will be eligible to leave. Send to the RESOURCE UNIT where the resource will be determined to be surplus to the incident. Surplus resources will then be able to report to the DEMOB UNIT, receive a Demobilization Checkout Form (ICS 221), get the appropriate ICS 221 signatures, and then return the completed ICS 221 to the DEMOB UNIT prior to final release or reassignment. Resources are not to contact South Ops or the expanded dispatch center unless instructed to do so by the Demobilization Unit.

RELEASE PRIORITIES

- 3. Hired personnel and equipment
- Other agencies (USFS, BLM, etc.)
