WEATHER SUMMARY

(Refer to Weather Forecast for details) **RAWS: Smith Peak – Ridge Winds, Jerseydale – Temp & RH**
SUNDAY: Mostly sunny to partly cloudy. Max Temp: 79-85°. Min RH: 19-24%. Winds – W 3-7 mph.
MONDAY: Cloudy. Max Temp: 69-75°. Min RH: 42-50%. Winds – SE 3-6 mph.
TUESDAY: Mostly cloudy. Max Temp: 73-78°. Min RH: 55-60%. Winds – S 3-6 mph.

FUELS

On the north and east aspects and in drainages there is a heavy loading of mature brush (manzanita/oak brush) with a pine overstory. On the south and west aspects, the fuel loading is lower with limited timber overstory.
Minimum fine fuel moisture: 4-8%, 1000 hour FMC: 8-9%, Live fuel moisture: 60-75%.

OUTPUTS - FIRE BEHAVIOR

DAY SHIFT:

Thresholds for Active Fire Behavior in the Carstens Fire area:

* 20ft Winds (over 10 mph), *RH (under 20%), *Temperature (over 80°) and *1hr FMC (under 5%).

➤ SUNDAY – Forecasted BI: 110 (Down 11 from Saturday)

Within the fire area expect smoldering with a remote chance of surface creeping within the far interior, predominantly in the heavier fuels in the drainages and on the north aspects. No fire spread or control issues are anticipated. Today's maximum fire behavior potential for a free burning fire is decreasing as a result of the cooler/moister conditions.

Maximum Fire Behavior Potential (Head Fire of a New Start or Spot Fire):

Rate of Spread: 3-5 c/h. Flame Length: 2-3 ft, Probability of Ignition: 50%. Max spotting distance 1000 ft.

➤ MONDAY & TUESDAY

Expect only highly isolated smokes well within the interior in the heavier fuels. Zero potential for surface spread or torching. The maximum fire behavior potential for a free burning fire is exceptionally low as a result of the overcast conditions with a chance of precipitation.

Maximum Fire Behavior Potential (Head Fire of a New Start or Spot Fire):

Rate of Spread: 1-2 c/h. Flame Length: 1 ft, Probability of Ignition: 20%. Max spotting distance 1000 ft.

NIGHT SHIFT:

Sunday – Tuesday

Expect the fire behavior on the fire for all nights to be minimal to non-existent as a result of the cool and moist conditions.

AIR OPERATIONS

- Conditions should be favorable for air operations. Sunrise at 0542'ish. Sunset at 2026'ish.

SAFETY.

- Should precipitation occur, expect slick/slippy conditions in the black, especially in the thick ash located in the hard black areas.
- Be heads up for an increase in rolling materials (logs & rocks) onto the roads & onto/across control lines.
- Any precipitation could also loosen up the roots of the already weakened green trees and snags.
- ❖ *"In order to keep a true perspective of one's importance, everyone should have a dog that will worship him and a cat that will ignore him." - Dereke Bruce*
