# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 003

TYPE OF FIRE: Wildfire

FIRE NAME: Rough Fire-West

OPERATIONAL PERIOD: 09/15/15 0700-0700

DATE ISSUED: September 14, 2015

TIME ISSUED: 19:00

UNIT: CA-SNF-001746

Signature: *J. Shelton*

Typed/printed: Jeff Shelton (LTAN/FBTS)

## INPUTS

### WEATHER SUMMARY:

**\*\*\* Possible Isolated T-storms in Afternoon \*\*\***

Expect cooler temperatures and higher humidity to continue. Anticipate a shift in wind direction; Southeast early, changing to Southwest by afternoon. Persistent overnight relative humidity recovery will shorten the burn window. Abundant cloud cover will further impede fuel receptivity throughout the day.

**Max. Temperatures** – 65 to 75 degrees (Down 5)      **Min. Humidity** – 40 to 50% (Up 10%)      **LAL** – 2

**Winds (Eye Level)**

**Morning:** Downslope 2-4 mph    **Afternoon:** Slope/Valley 3-6 mph    **Ridgetop:** SW 5-7 mph

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

- Recent precipitation has dramatically decreased the availability of fine fuels to carry fire.
- Drought effected larger fuels continue to burn and consume; despite recent higher humidity.
- Larger fire effected fuels which do roll out have high potential to remain hidden.
- Fire weakened trees are losing strength hour by hour. Evaluate before you engage.
- Assess changing fuel types as your work transitions different altitudes on the fireground.

#### SPECIFIC:

**All Divisions: Spot fires outside established containment lines or new starts...**

**Flame Lengths-** Up to 3 ft. in Grass, Up to 8 ft. in Brush

**Rate of Spread-** Up to 20 feet/minute in Grass, Up to 40 feet/minute in Brush

**Spotting Distances-** Up to .1 miles in Grass/Brush, Up to .2 miles from Torching Trees

**Probability of Ignition-** Shaded Fuels: 30%    Unshaded Fuels: 40% ....at the peak of the burn period

#### AIR OPERATIONS:

**Sunrise- 6:41    Sunset-7:07**

Expect poor to fair smoke dispersion during the morning hours; with the inversion breaking well before noon. Mixing heights will rise to 9000 AGL during peak daytime heating. Anticipate possible standing clouds over the higher terrain due to a saturated air mass. Available flight hours are decreasing as Summer moves into Fall.

## SAFETY

**Understand Hazard Trees- Read IRPG Pages 22 and 23!**

**Then**

**Look Up! Look Down! Look Around!**

# SAFETY and HEALTH MESSAGE

We Are ALL SAFETY OFFICERS !

INCIDENT: Rough Fire "West Zone"	DATE: September 15, 2015    TIME: 0700-0700
----------------------------------	---

## **Slow down and drive safe!**

**Ensure the Communication Plan is understood and followed** (ICS 205 in your IAP). Make sure your radio is programmed correctly.

**Manage yourself and your personnel** for excessive fatigue; many have driven long distances or been deployed for extended periods. Use the buddy system and take breaks as needed.

**Hazard trees:** Dead trees from bug kill. Survey your work areas for hazard trees, flag and restrict access, use only qualified personnel for tree felling. Review and follow **Hazard Tree Safety**, pg. 22-23 in your IRPG.

**Ash Pots:** the droughts stricken fuels consumed entirely by fire are creating flat ash pots with hot coals underneath. Watch your footing.

**Limited Resources:** With resource needs at a premium, tactics may be adjusted, however, SAFETY must never be compromised.

**Eat and drink fluids** on a regular basis to maintain an appropriate energy level for any expected work assignment. Remember, you are the only one that knows your limitations.

**Complacency:** ALL PPE must be worn, including shrouds, when working on the fire line. Mop up requires your situational awareness even without active fire. Unburned fuels can reignite suddenly and turn against you.

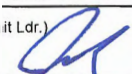

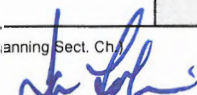

**Review your ICS 206 and know what to do in the event of a medical emergency.**

### Tailgate Safety

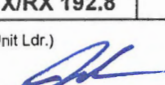

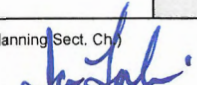

- **Accountability:** everyone checks in and everyone checks out. Supervisors know where their crews are at all times
- **Communication:** everyone knows the com-plan
- **Briefing:** everyone knows the game plan, everyone knows the contingency plan
- **Safety gear:** everyone has the appropriate safety gear and in good working condition
- **LCES:** they are clear and made known to everyone

### Safe Driving

- **SLOW down** when driving on and off the line.
- Defensive driving always
  - Even if the road or highway is shut down for emergency personnel only, you must drive only as safe as the conditions allow.

## INCIDENT MANAGEMENT TEAM

### WATER USAGE PLAN

#### *California Drought Emergency*

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

#### **Fireline personnel-** (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

#### **Road Maintenance and Repair-**

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

#### **Aviation Operations-**

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

#### **Private Water Supplies-**

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, Water Usage Reports) and develop a plan to replace water.

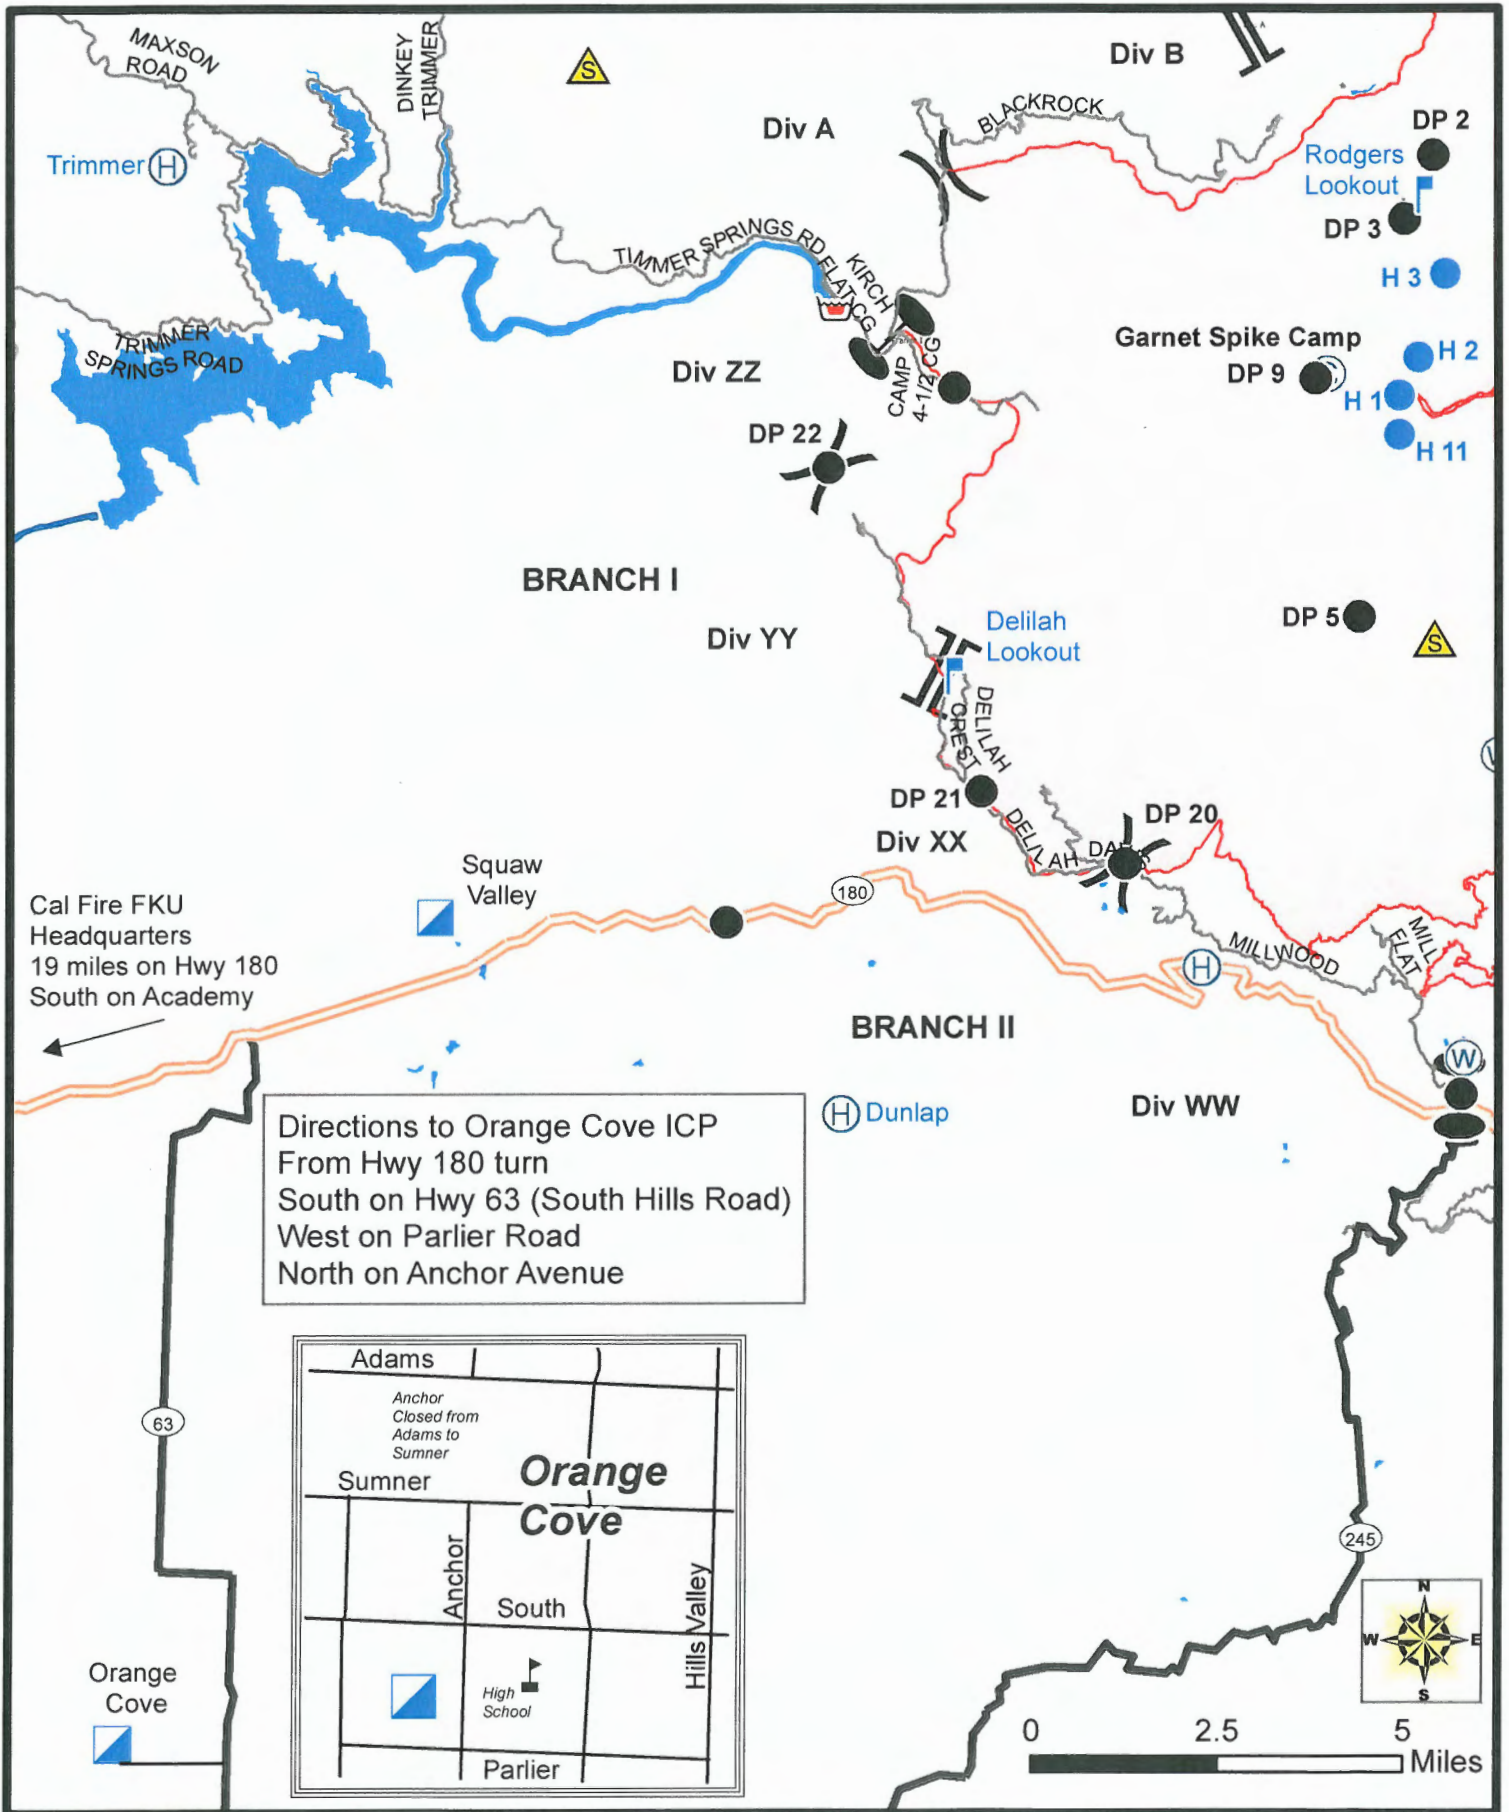

#### **Public/Municipal Water Supplies-**

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.

#### **Management and Supervision-**

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
