<b>Comments / notes on tonight's mission and this interpretation:</b> Tonight's mapping began with the previous night's IR heat perimeter. No perimeter change was detected in tonight's imagery. No intense heat was mapped. One small polygon of scattered heat was located on the unnamed bench west of Stecker Flat. Isolated heat sources were located in the southwestern portion of the fire, most prominently in the unnamed drainage south of Red Mountain Creek. A concentration of isolated heat sources persist on the west end of Shingle Mill Bench. However, no isolated heat sources were identified east of Shingle Mill Bench.
