Remote Check-In

Incident Information

Covid Tracking Form

Lake Incident Maps

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name: <p style="text-align: center;">LAKE FIRE</p>	2. Operational Period:	Date From: 8/17/2020	Date To: 8/17/2020
		Time From: 0600	Time To: 1800

3. Objective(s):

Management Objectives

- Ensure that strategies and tactics provide for firefighter and public safety through the application of sound risk management principles.
- Minimize the threat of exposure to COVID-19 by adhering CDC COVID-19 Guidelines.
- Minimize the threat to private property, critical infrastructure and heritage resources.
- Establish and strengthen cooperator, partner, and stakeholder relationships.
- Minimize the cost of the incident by employing tactics that have the highest probability of success while minimizing firefighter exposure.

Control Objectives

- Keep the fire North of Castaic Lake
- Keep the fire South of Hwy 138
- Keep the fire East of Interstate 5 Freeway.
- Keep the fire West of Tule Ridge

General Situational Awareness:

Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees.

In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family and to ensure all employees return home safely, make sure to practice social distancing.

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 006	TYPE OF FIRE: Wildfire Full Suppression
FIRE NAME: Lake	OPERATIONAL PERIOD: 8-17-20 Day Shift
DATE ISSUED: 8-16-20	TIME ISSUED: 2200
UNIT: CA-ANF	SIGNED: <i>Matt Brown</i> 
Typed/printed: Matt Brown FBAN(t)	

INPUTS

WEATHER SUMMARY: Expect daytime temperatures to be higher today, reaching high 90's to low 100's at the upper elevations with RH dropping 5% lower than yesterday to the mid teens. Winds will be NNE early in the day then switching to SW 5-15 with gusts to 25 mph at the 20 ft level.

Poor recoveries and warm overnight temperatures will start the burn period early in the day, unless shading from the overnight smoke shades the fuels until late morning. Expect increasing instability after noon and especially when temperatures reach 100 degrees.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fire will experience another day with an unstable atmosphere parked over the top. Today we will continue to see small visual indicators of the instability such as early cumulus build up. This unstable layer can enhance burning through convection or a type of "chimney" effect". Due to the decedent dry fuels and lack of fire history, expect long rang and increased spotting. This heavier fuel layer has sufficient size and duration to produce the type of ember cast that can be lofted up in the column and cause fires over a mile away from the main fire.

Live fuels are at critical and burning index extreme. ERC is forecasted to set another record today. Expect pyrocumulus development when temperatures reach 100 degrees and the fire is burning in continuous shrub and timber fuels.

SPECIFIC:

Divisions toward the head of the fire will experience a change in fuels and topography. Although winds can increase on the lee side of the slopes adjacent to the desert communities, choice of barriers and lighter grass type fuels has allowed the fire to respond favorably suppression efforts. Fires that escape mop-up operations will run in the light fuels with a rapid rate of spread.

Divisions on the right flank of the fire have held for several burn periods. The recent fire history has reduced the fuel loading so the fire has checked itself in most divisions. Some threats remain to the line in drainages requiring extensive mop-up where fuels are heavy. Spots outside the perimeter will need wind to push through the broken fuel bed.

Divisions on the left flank of the fire continue to have the most challenging fire behavior. Spotting is expected to exceed a mile. The probability of ignition will reach 100% in the afternoon. The fire will continue to flank out and run in aligned drainages and slopes. Containment along Pine Mountain road will continue to be threatened by spots and runs that are produced in aligned drainages. Watch for fire whirls on the lee side of broken terrain features and intersecting drainages.

Head Fire Estimates BEHAVE Plus 5.0.5

Fuel Type	ROS	FL	PIG
Shrub SH7	100-120 ch/hr 80-100 ch/hr before 1100 hrs	20-30 ft 15-20 ft before 1100 hrs	100% 40% before 1100 hrs

AIR OPERATIONS:

Early morning switch to the NE wind may carry some smoke back over the fire area. Air Operations should experience improved visibility after 1000 hours.

SAFETY

In the heavier fuels, spot fires can grow and spread rapidly and with great flame lengths. Consider your escape route and overall effectiveness based on fire behavior before engaging. Pyrocumulus collapse rarely produces significant outflow winds directly over a fire, but the chance of a down draft should be considered when planning work assignments. There is a chance of thunderstorms in the afternoon. Safety plans should consider outflows from these storms as well.

Fire Weather Forecast

FORECAST NO: 6

NAME OF FIRE: Lake Fire

PREDICTION FOR: 0600 Mon – 1800 Mon

UNIT: CA-ANF

SHIFT DATE: 08/17

SIGNED:

Incident Meteorologist - Matt Mehle

TIME AND DATE

FORECAST ISSUED: 2100 08/16/20

...Excessive Heat Warning valid through Thursday Evening...

WEATHER DISCUSSION: Locked in a pattern with dangerous heat very, dry conditions, and instability. Lingering monsoon moisture will produce scattered cumulus clouds in the afternoon with a possibility for thunderstorms. Dry lightning and gusty outflows would be the greatest threat with developed storms. Lastly, an unstable atmosphere will remain allowing for vertical plume growth in the afternoon. Very hot and dry conditions will persist for much of the week.

WEATHER FORECAST FOR MONDAY:

WEATHER: Mostly Sunny. Slight chance for afternoon showers and possibly thunderstorms.

TEMPERATURES: Max 100-107 F...above 2000' 95-100 F **24 HR Trend:** 3 degrees warmer.

HUMIDITY: Min 10-20% ...above 2000' 10-20% **24 HR Trend:** 5% drier.

20-FOOT WIND: Northeast 3-6 mph in the morning. Southwest 5-15 mph in the afternoon gusts 20-25 mph.

Chance of Wetting Rain (0.10"): <10% **LAL:2** in the afternoon

WEATHER FORECAST FOR MONDAY NIGHT:

WEATHER: A few showers/thunderstorms possible in the evening, them becoming partly cloudy overnight.

TEMPERATURES: Min 75-80 F...above 2000' 70-75 F. **24 HR Trend:** Little Change.

HUMIDITY: Max 25-35%...above 2000' 30-40%. **24 HR Trend:** 5% drier.

20-FOOT WIND: Southwest 4-8 mph with gusts to 15 mph in the evening becoming West to Northwest 3-6 mph overnight...near the Desert Floor light northeast by morning.

Chance of Wetting Rain (0.10"): <10% **LAL:2** becoming 1

EXTENDED FORECAST:

TUESDAY... Mostly sunny. Slight chance of showers and thunderstorms. Max temps 99-108 F above 2000' 96-101 F. Min RH 10-20%. East to Northeast winds less than 5 mph in the morning. Southwest 6-12 mph with gusts 20-25 mph in the afternoon.

WEATHER SAFETY MESSAGE

- Dangerous Heat – Stay hydrated.
- Thunderstorms with dry lightning and gusty outflow winds.
- Plume dominated fire possible. Use LCES
 - Collapsing plumes create gusty and erratic winds

FIRE DANGER — High Country Forecast Zone

Maximum, Average, and 97th Percentile, based on 10 years data

Fire Danger Area:

- ◆ High Country Fire Danger
- ◆ High Country Zone
- ◆ SIG High Country WX
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

EXTREME — Use extreme caution
High — Watch for change
Moderate — Lower Potential, but always be aware

Maximum — Highest Burning Index by day for 2009 - 2019

Average — shows peak fire season over 10 years (2110 observations)
97th Percentile — 3% of the 2110 days from 2009 - 2018 had an Burning Index above 228

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:
 20+ Wind Speed over 0 mph, RH less than 1%,
 Temperature over 1, Burning Index over 0

Years to Remember: 2009 2016

Fuel Model: B - California Chaparral

Remember what Fire Danger tells you:

- 🔥 Burning Index gives day-to-day fluctuations calculated from 2 pm temperature, humidity, wind, daily temperature & rh ranges, and precip duration.
- 🔥 Wind is part of BI calculation.
- 🔥 Watch local conditions and variations across the landscape — Fuel, Weather, Topography.
- 🔥 Listen to weather forecasts — especially WIND.

Past Experience:

- Wind Driven Fires Can Produce:
- Rates of Spread > 80 ch/hr
- Spotting up to .5 - 1 mile ahead of fire front
- Eye Level Winds > 7 MPH
- Live Fuel Moistures < 75%
- Fine Fuel Moistures < 5%
- Active Night Burning Conditions with RH < 25%
- Non- Wind Driven Fires: Mature fuel beds 20+ years of growth
- Identify the alignment of wind, slope and solar pre heating

Responsible Agency: LA County
 FF+5.0 build 20191211 06:01/2020-14:52 (C:\Users\Garnett ...High County 2019_10 Years)

SAFETY MESSAGE

Lake Fire CA-ANF-003273	Day Shift 08/17/20 0600-1800
<p>MAJOR HAZARDS:</p> <ul style="list-style-type: none"> • Potential for Plume Dominated, Large Fire Growth. Erratic Winds & Spotting • Hazard Trees in the Black and in the Green • Heavy Equipment Operations • Dehydration, Heat Stress, and Fatigue • Thunderstorms with Lightning and Erratic Winds 	
<p><u>Fire Order of the Day – Base all actions on current & expected behavior of the fire.</u></p> <ul style="list-style-type: none"> ➤ Aggressive Risk Management is our primary means of maintaining safe wildland fire operations. Consistently evaluate fireline tactics and do not hesitate to adjust tactics as environmental and human factor conditions change – Review Risk Management Process in IRPG, page 1. ➤ Dehydration, Heat Stress, and Fatigue - Constantly monitor your water and electrolyte intake to avoid dehydration. Dehydration, long work hours, and high temperatures all impact fatigue. Maintain the work to rest ratio, 2:1. ➤ Hazard Tree Assessments – Perform hazard tree assessments & be heads up where you park your vehicles. Hazard trees can be dead snags as well as green trees. IRPG page 22. ➤ Air operations- Multiple aircraft, visibility, bucket drops and communication. Is your aircraft mission that you requested necessary? If so, are all of the hazards identified and known to all? 	
<p style="text-align: center;">Common Denominators of Fire Behavior On Tragedy Fires</p> <ul style="list-style-type: none"> *Most incidents happen on the smaller fires or on Isolated portions of larger fires. *Most fires are innocent in appearance before the “flare-ups” or “blow-ups”. In some cases, tragedies occur in the mop-up stage. *Flare-ups generally occur in deceptively light fuels. *Fires run uphill surprisingly fast in chimneys, gullies, chutes and on steep slopes. *Some suppression tools, such as helicopters or air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups. 	<p style="text-align: center;">Look Up, Look Down, Look Around</p> <ul style="list-style-type: none"> *Fuel Characteristics – Assess prior to beginning operations. *Terrain & Fuel Accumulations – Scout prior to beginning operations and during operations. *Wind – Measure, observe, feel and notice changes. *Fire Behavior – Monitor constantly prior to and during operations. *Safety – Ask questions in unfamiliar situations. <p style="text-align: center;">The only dumb question is the one that wasn't asked.</p>
<p>Safety Officers: Brian Savage- SOF1 Dave Welch- SOF1</p>	

INCIDENT RISK ANALYSIS

LAKE FIRE

(ICS 215a) Day Shift

BR/ DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	WEATHER	<ul style="list-style-type: none"> • Be aware of changing weather conditions. • Watch out for increasing heat, winds, and instability. • Anticipate increased fire behavior conditions. • Communicate any observed changes in weather and fire behavior. • "Base all actions on current and expected behavior of the fire."
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Conduct thorough assessments before starting work. • Ensure LCES is in place. • Provide additional briefing on drought related fire behavior and areas of high concentration of hazard trees. • Increase the level of SA. • Provide additional briefing for new resources and maintain communications..
ALL	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Follow the line construction protocols and safety precautions for direct and indirect line construction. • Watch footing and spacing between firefighters, especially those working below. • Make sure LCES is in place. • Follow the "Downhill Line Construction Checklist" on IRPG page 9. • Do not work above any personnel. • Evaluate necessity to send personnel in areas with limited access.
ALL	TRAFFIC HAZARDS AND DRIVING	<ul style="list-style-type: none"> • Practice "Defensive Driving" techniques. Traffic volume is high. • Use spotters when backing. • Always use headlights. • Use warning lights when working on roads or traveling in smoke. • Observe posted speed limits. • Use chock blocks and turn wheels into the hill. • Watch for rolling rocks and debris from hillsides.
ALL	COMMUNICATIONS	<ul style="list-style-type: none"> • Share your Situational Awareness (hazards, changes, etc.) to those who also have a need. • Radio Communications may be poor in some areas: use human repeaters as needed. • Ensure all personnel are familiar with the incident and the IAP communications plans. • Make sure all resources have radios cloned appropriately. • Ensure that non-agency resources understand radio use and procedures.
ALL	FATIGUE / COMPLACENCY	<ul style="list-style-type: none"> • Be alert for signs of heat stress and fatigue, take breaks as necessary. • HYDRATE before, during and after your shift. • Monitor ALL resources for level of fatigue. • Recognize the symptoms of heat stress and fatigue, and take action as necessary to provide rest and recovery. • Repeated assignments in the same area can lead to complacency making personnel more vulnerable to accidents. • Take steps (switching of assignments, training opportunities during slow periods, etc.) to maintain situational awareness for the duration of the incident
ALL	AIR OPERATIONS	<ul style="list-style-type: none"> • Do not plan on air resources for tactical support or medical transportation. • Refer to page 58, IRPG for directing bucket drops. • Ensure positive communication with all air resources.
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Ensure ground personnel have safety illumination, with light-sticks being the minimum. • Maintain a 50'-100' exclusion area around equipment. • In timber increase safety distance to 2 ½ times canopy height.
ALL	HAZARD / DANGER TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.22-23). • Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled. • Be especially alert around snags during wind events. Large green trees can also be dangerous.
ALL	FIRING OPERATIONS	<ul style="list-style-type: none"> • Only personnel trained in the use of each device will be authorized to use firing equipment. • Ensure all personnel are aware of firing operation that may affect them. • Wear appropriate PPE. • Ensure aerial/ground ignition plans have been adequately developed and personnel are briefed.
ALL	ENVIRONMENTAL HAZARDS	<ul style="list-style-type: none"> • Keep alert for wildlife, deer, rattlesnakes, bees, and plants. Watch footing and hand placement around rocks. Use caution around gas and power lines. • Personal hygiene is #1 when it comes to Poison Oak Prevention. • Watch for agitated buffalo and cattle that may charge. • Follow all CDC and Agency COVID 19 protocols. • Watch for unmarked mine shafts.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

8. MEDICAL EMERGENCY PROCEDURES

LINE "MEDICAL-EMERGENCY" PLAN:

- Crew Supervisor to contact Division Supervisor/Operations with:
 - Patient Complaint, Condition and Location via Tactical or Command frequency. Priority 1/Red & 2/Yellow Patients trigger Incident within Incident (IWI).
- Division Supervisor/Operation contacts Lake Communications:
 - Division Supervisor or POC* will run "Medical -Emergency" on the Command frequency.
 - Division Supervisor or POC* to use "Medical Incident Report" worksheet on page 118-119 of the IRPG.

POC* (Point of Contact) and/or Operations

LINE "NON-EMERGENCY INCIDENT" PLAN:

- Crew Supervisor to contact Division Supervisor with:
 - Patient Complaint, Condition and Location via Tactical or Command frequency. Priority 3/Green Patients do not trigger Incident within Incident (IWI).
- Division Supervisor contacts Apple Communications:
 - Division Supervisor or POC* will run "Non-Emergency Incident" on the Command frequency.
 - Division Supervisor or POC* will use "Medical Incident Report" worksheet on page 118 -119 of the IRPG.

IN-CAMP – 24 HOUR MEDICAL

- Contact Lake Communications with:
 - Patient Complaint, Condition and Location via LOGS net or Command frequency

Human Resource Message

In an ever changing environment as we adopt COVID mitigation procedures is not easy. Thank you for your ability to adapt to the circumstances.

Communication and understanding will continue to allow you to be informed and be successful!

“It is not the strongest of the species that survives, nor the most intelligent. It is the one that is most adaptable to change.”

Charles Darwin

**Andrea Cabida- HRSP

TRAINING SPECIALIST MESSAGE

**All Lake Incident Trainees
Beat the Rush!!!**

In order to receive documented credit for your training assignment you must register with the Incident Training Specialist.

The Training Specialist is available immediately following the morning Briefing.

Bring the following documents to register:

- **ICS Qualification Card**
- **Position Task Book**

Trainee Data Forms are available at the Training Office

Remember: No documentation – it didn't happen!

Claudia Soiza - 949 632-7813

**Incident Trainee/Trainer Data Form
Lake Fire CA-ANF-003273**

Training Specialist: Claudia Soiza 949.632.7813

- All Incident trainees, including those on Firefighting Modules at your earliest opportunity complete this form and see the Training Specialist.
- Prior to or as you process through DEMOB, remember to close your training package. To close your training package, bring: 1) A performance rating from your trainer. (ICS 225)
2) Your task book that has as many entries as possible by your Trainer.

Trainee Data

Trainee Name: _____ ICS Trainee Position: _____

Request # (A,C,E, or O): _____ Agency Designator (Ex. CA-RRU): _____

Ordered as Trainee? Y N Priority Trainee ____ Local Forest Trainee ____ IMT Trainee

Date Assigned: _____ Cell / Contact # While on Incident: _____

FINANCE MESSAGE

We need to **All Division Supervisors and Branch Directors** to come in **each day** after shift and debrief with the Cost Apportionment Team (CATS).

The process needs to be done from the start of the incident, so any Initial Attack/Type 3 Division Supervisors/IC please go in and see the CATS team also.

The Cost Apportionment Team is located at ICP in the Parking Lot 12 in white trailer.

Division Supervisors or Branch Directors that are not coming to ICP, you can call the team at the following numbers:

805-698-2541

626-698-9852

Please complete this process daily while it is fresh in your mind.

FEDERAL FINANCE IS MISSING MANIFEST FOR RESOURCES

We can't enter your Crew Time or Shift Tickets without the proper documentation. Please make sure to turn in a Manifest when you turn in your 1st time to Finance.

All crews and engines need to put their POSITION CLASSIFICATION, (ex: FFT1, CRWB). For Federal or cooperator please provide (GS, WG or Other).

AD (Casual Hire) please provide your position classification and AD Rate and whether you are a trainee.

If you don't have a manifest. Please make sure to add this information on your CTR or Shift Ticket.

Be sure to identify on your CTR/Shift Ticket any crewmember/operator changes.

We are missing **Manifest** for multiple resources so please provide this in the box as soon as possible at the Finance Trailer:

ALL CREWS – FEDERAL, AD AND CONTRACT.

ALL ENGINES – BOTH FEDERAL AND CONTRACT

Finance Section - Shift Ticket Examples

Old Ridge Route (ORR)

The Old Ridge Route/8N04 dates to 1915 and is of national significance and fragility.

In order to have no impacts to the ORR,

- Suppression activities along the Old Ridge Route should have an ARCH or REAF monitor.
- When possible use Fisher Springs Road or Posey Canyon Road to minimize trips along the ORR.
- Staging areas should be located off the ORR, whenever possible.
- No grading of staging areas along the ORR; any areas along the ORR suitable for staging are archaeological sites.

Tracked equipment and heavy vehicles can damage the road surface of the ORR.

- No blading of the ORR road surface. Lift Blade whenever possible
- Use rubber tired vehicles and equipment as much as possible **whenever possible avoid using tracked vehicles or equipment based on operational necessity.**
 - **If tracked equipment cannot be avoided on the ORR surface, coordination should be made with an ARCH or REAF. If tracking must occur, it is preferable to stay on the asphalt surface (NOT the concrete).**
- Any tracked equipment must be brought in on a low boy trailer and offloaded onto the dirt access road or other dirt surface outside the ORR;
- Diversion cones to direct traffic and/or rubber pads will used to protect fragile road surfaces. **The edges of the ORR where equipment must cross the road should be armored with rubber mats** or other effective material.
- Vehicles should avoid stopping and maneuvering on pavement that is in poor condition.
- Heavy vehicles (Gross Weight 8,500 pounds/axle and over) should maintain a speed limit of 10 miles per hour. Light duty pickups and crew transports should maintain a speed limit of 15 miles per hour.

Botany/Invasives

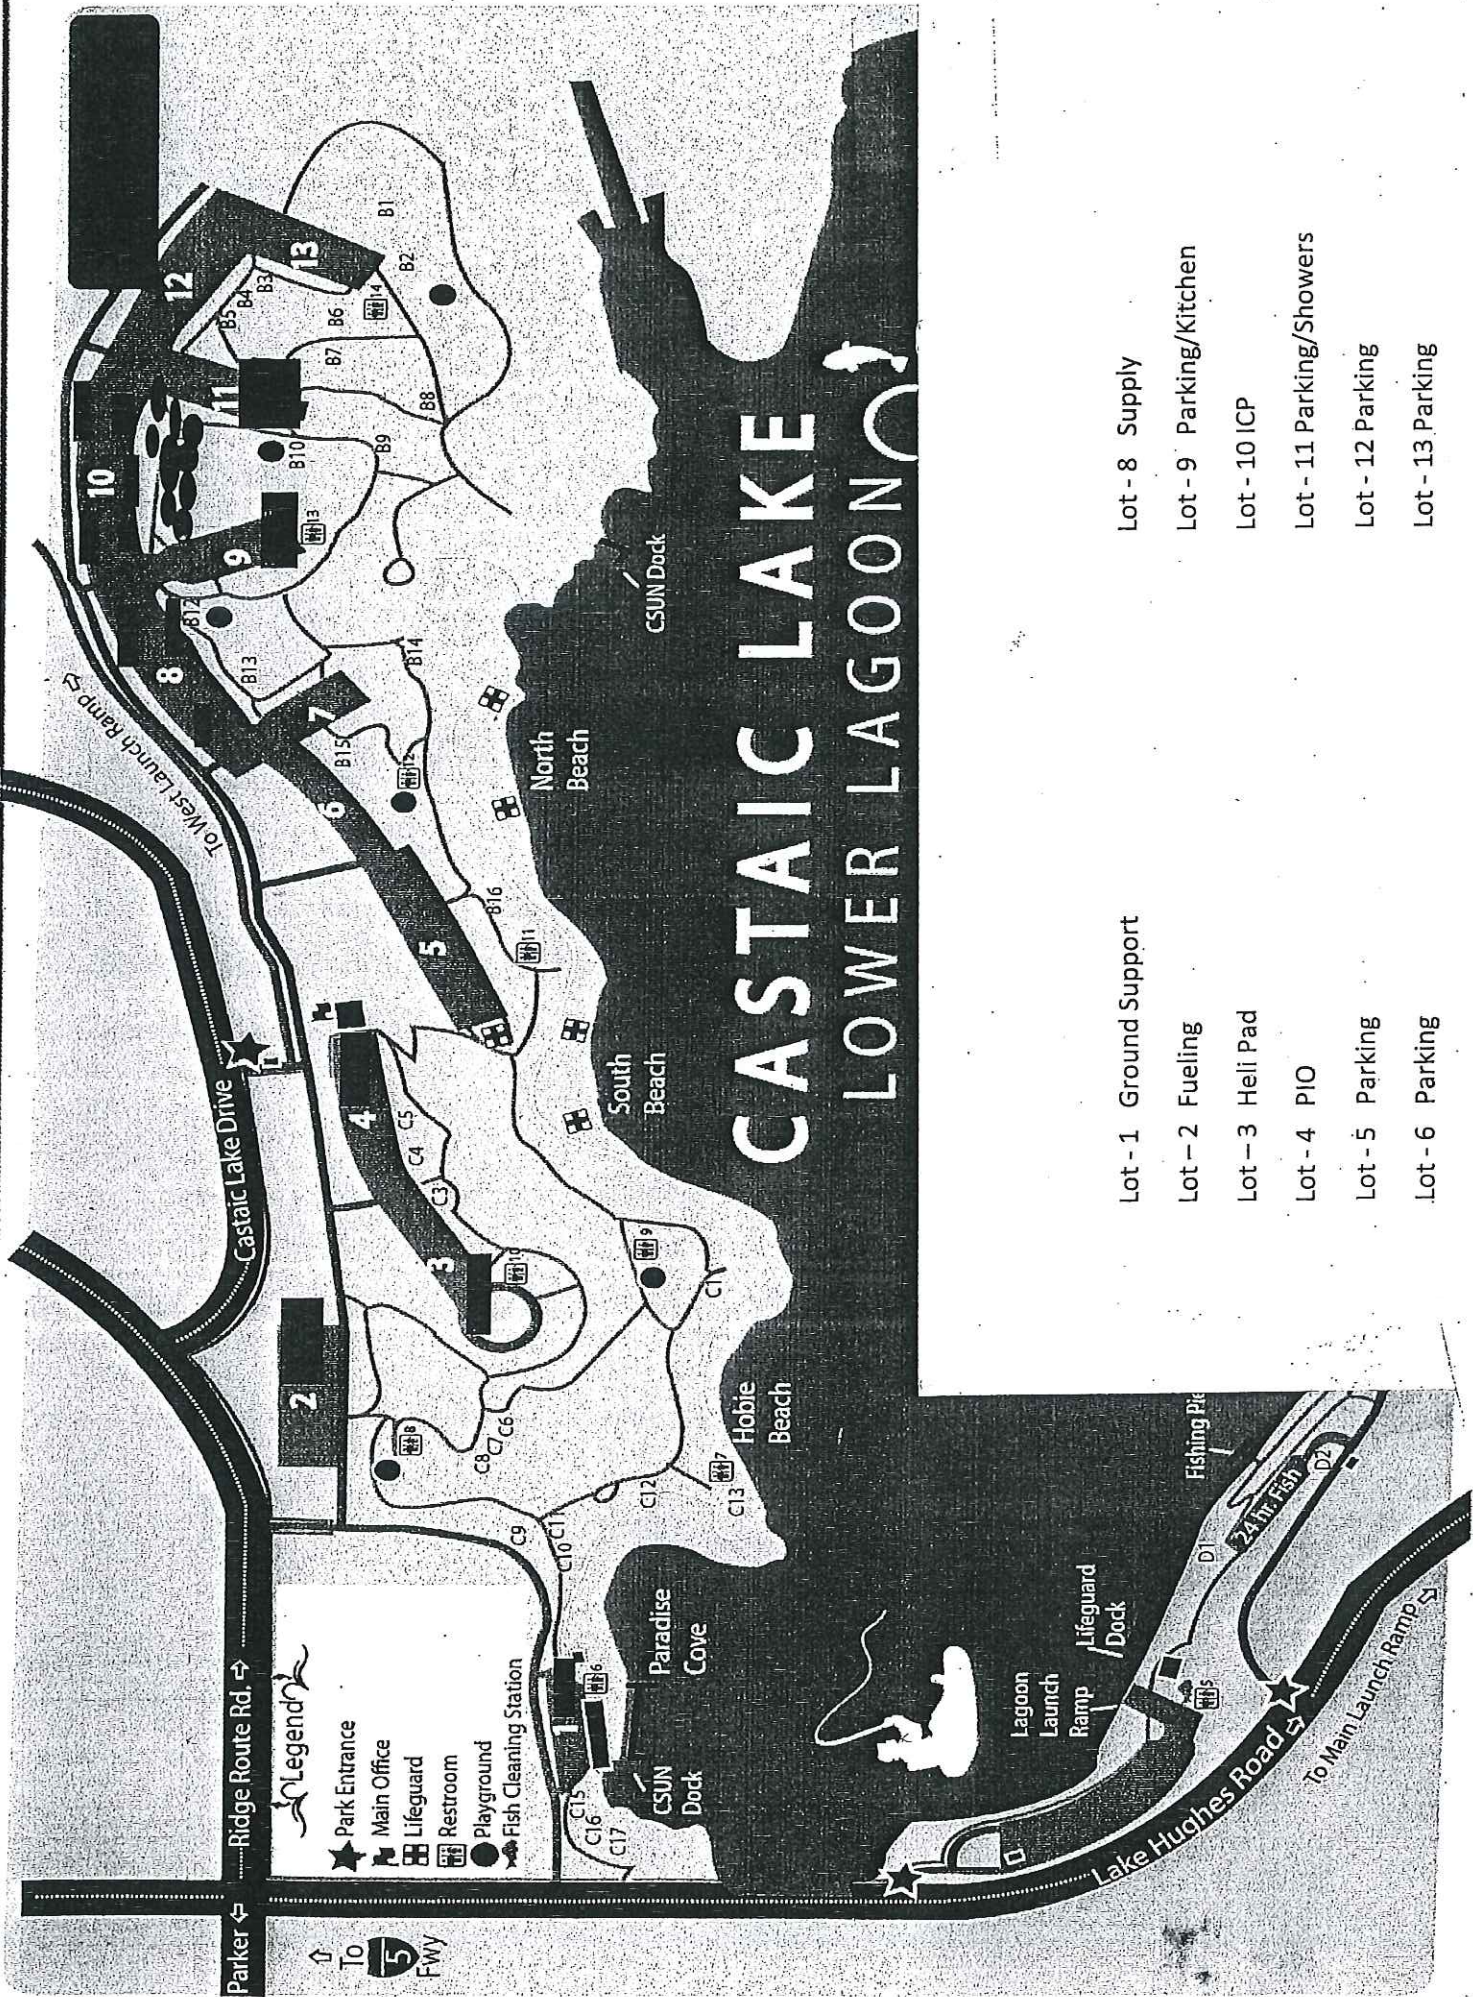

Areas of invasives will be flagged and should be avoided whenever possible to avoid their spread. If avoidance is not possible, areas will be monitored in the future. Types of invasives include (Phytophthora. - soil born fungus which can spread into native areas as kill native vegetation), Yellow Star Thistle, Perennial Pepperweed., Blessed thistle.

SOCAL Gas Pipeline mitigation/restoration sites

Soils are thin and the areas has a history of landslides 2005 landslide broke oil line

Medical Incident Report

FOR A **NON-EMERGENCY INCIDENT**: WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A **MEDICAL EMERGENCY**: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE TO INITIATE RESPONSE FROM COMMUNICATIONS

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree.

Requesting air ambulance to Forest Road 1 at (Lat./Long.)

"This will be the Trout Meadow Medical Incident, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency AND Transport Priority (priority 1, 2, 3)	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented. <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes. <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport Ex: Sprains, strains, minor heat-related illness.
Nature of Injury or Illness & Mechanism of Injury	Brief Summary of Injury or Illness (Ex: Unconscious, Struck by Falling Tree)
Transport Request	Air Ambulance / Short Haul/Hoist Ground Ambulance / Other
Patient Location	Descriptive Location & Lat. / Long. (WGS84)
Incident Name	Geographic Name + "Medical" (Ex: Trout Meadow Medical)
On-Scene Incident Commander	Name of on-scene IC of Incident within an Incident (Ex: TFLD Jones)
Crew Patient Care	Name of Care Provider (Ex: EMT Smith)

3. INITIAL PATIENT ASSESSMENT: Complete this section for each patient as applicable (start with the most severe patient)

Agency Affiliation: (NO PATIENT NAMES) Federal Contractor Local Government

Patient Assessment: Age: Weight: Chief Complaint:

(If pertinent to Injury) Skin Signs: (color/moisture/temp) Level of Consciousness: BP: HR: Respirations:

Treatment:

4. TRANSPORT PLAN:

Evacuation Location (drop point, intersection, helispot, Lat. / Long, hazards) Patient's ETA to Location:

5. ADDITIONAL RESOURCES / EQUIPMENT NEEDS:

Paramedic / EMT - Crews - Immobilization Devices - AED - Oxygen - Trauma Bag - IV/Fluid(s) - Splints - Rope rescue - Wheeled litter - HAZMAT - Extrication

6. CONTINGENCY: Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method?
Be thinking ahead.

7. ADDITIONAL INFORMATION: Updates/Changes, etc.

REMEMBER: Confirm ETA's of resources ordered. Act according to your level of training
Be Alert - Keep Calm - Think Clearly - Act Decisively

*** Follow up with MEDL upon return to ICP ***
