WEATHER SUMMARY

(Refer to Weather Forecast for details) **DAY:** Sunny, hot and very dry. Max Temp: 89-95°. Min RH: 8-14%. Slope/Valley Winds – SSW 5-10 mph becoming SSW to 12-18 mph with gusts to 30 mph in the PM.
NIGHT: Min Temp: 53-59° Max RH: 43-49% Winds: WNW 5-10 mph with gusts to 15 mph then variable 5-10 mph.

FUELS

Heavy loading of decadent brush (chaparral, ceanothus, chemise, scrub oak, Manzanita). Heavy grass load on lower slopes, with less grass on upper slopes. Oak and pine in the drainage bottoms and mixed conifer on north aspects and ridges. Minimum fine fuel moisture content: 3-4%, 10 hour FMC: 3-5%, Live fuel moisture: 80-90%.

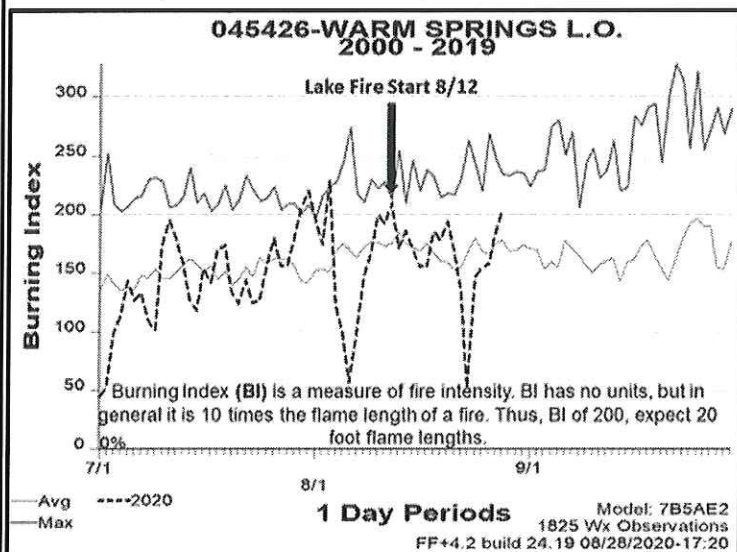

OUTPUTS - FIRE BEHAVIOR

Local Thresholds for Active Fire Behavior:

Winds (over 10 mph), RH (less than 20%), Temperature (over 90°) and BI (over 150).
Predicted BI today 211 – (Up 7 from a BI of 204 yesterday)

ALL THRESHOLDS FOR ACTIVE FIRE BEHAVIOR WILL BE MET TODAY!!!

Yesterday's fire behavior was limited to a dozen or so areas of heat on the north aspects in the timber and heavy brush fuel types. Expect today's fire behavior to be similar to what was observed yesterday but with less frequency of heat due to fuels burning out and the excellent efforts of all field going suppression resources yesterday. However, the potential will remain moderately high for isolated areas of heat and flare ups in the interior unburned islands. Any green island within ½ mile of the perimeter could pose a threat to the fire's perimeter if a flare up was to occur.

SPOT FIRES AND INITIAL ATTACK:

The maximum fire behavior potential will increase slightly today. Any spot fires or new starts have the potential to spread very rapidly reaching a size of 2000 acres or more in one hour.

Maximum Fire Behavior Potential (Head Fire):

- *Rate of Spread: 160-240 c/h (2-3 mph).
- *Flame Length: 20 - 30 ft,
- *Probability of Ignition: >90%.
- *Max spotting distance up to 1/2 mile.

FEEDBACK: Observed fire behavior, weather observations, fuels send to shellycrook@live.com

AIR OPERATIONS

- Conditions should be favorable for air operations. Sunrise: 1825 Sunset: 1925

SAFETY.

- As the fire behavior wanes, don't let your guard down, focus on the mission and your crews attitude.
- This fire season has only just begun; we have a long way to go; stay focused, stay positive and stay safe.
- "Expecting the world to treat you fairly because you are good is like expecting the bull not to charge because you are a vegetarian." - Dennis Wholey

BR/DIV	HAZARDOUS ACTIONS/CONDITIONS	MITIGATIONS/WARNINGS/REMEDIES
All	Hazard Trees	<ul style="list-style-type: none"> Follow "Hazard Tree Safety" guidelines, IRPG pages 22-23. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights. Post road guards when appropriate.
All	Air Operations	<ul style="list-style-type: none"> Ensure positive communication with all air resources. Don't plan on air resources for medical transport or resupply. Follow "Aviation Watch-Out Situations" IRPG P. 46. Refer to "Directing Bucket or Retardant Drops" IRPG P. 58 . Refer to "Aerial Retardant Safety" IRPG Pg57. Refer to "Aircraft Mishap Response Procedure" IRPG P. 62.
All	Line Construction	<ul style="list-style-type: none"> Follow the line construction protocols and safety precautions for direct and indirect line construction. Watch footing and spacing between firefighters, especially those working below. Ensure LCES is in place. Follow the "Downhill Line Construction Checklist" in IRPG p. 9.
All	Driving & Traffic	<ul style="list-style-type: none"> Practice "Defensive Driving" techniques traveling on all roads and city streets. Use spotters & Honk horn to alert personnel when backing. Follow Driving LCES (Lights, Chock blocks, Emergency brake, seat belts). Always use headlights, and observe posted speed limits. Yield to pedestrians and bicycles, and use the 3 second rule for following distance when driving. Use chock blocks, turn wheels into hill, ensure that windshields are kept clean of dust and bugs, and avoid distractions (eating, cell phones, & radio).
All	Heat Related Illness (HRI)& Dehydration	<ul style="list-style-type: none"> Drink Fluids throughout operational period (6-8 quarts/shift). Maintain water/electrolyte ratio of 3 to 1. Carry extra water on line and cache water at drop points. Take frequent breaks, minimum of 10 minutes every hour. Allow out of area resources to acclimate before expecting peak performance. Recognize symptoms of HEAT RELATED ILLNESS. <ul style="list-style-type: none"> Lack of energy, headaches, dizziness, hot skin, and lack of sweating.
All	Steep Terrain & Rolling Debris	<ul style="list-style-type: none"> Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access.
All	Heavy Equipment Operations	<ul style="list-style-type: none"> Refer to "working with heavy equipment" IRPG P. 86. Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment and increase it to 1 1/2 times tree height when in timber. Use a spotter when backing. Avoid working below heavy equipment.
All	COVID-19 Environment	<ul style="list-style-type: none"> Utilize social distancing (6 feet). Wear a facemask if you can't social distance. Maintain the "module of one" concept. Disinfect vehicle interiors, and commonly touched surfaces frequently. Do not share devices (i.e. cellphones, laptops, radios etc.). Utilize technology to communicate while maintaining social distance. Wash your hands frequently.
All	Poor Communications	<ul style="list-style-type: none"> Maintain communication with aviation resources, and suppression organization. Ensure all know frequency and protocol for contacting resources. Utilize the ICS 205. Utilize human repeaters when working in dead spots.

SAFETY MESSAGE

SAFETY IS OUR FIRST PRIORITY

Fire fighter safety comes first on every fire, every time

YOU ARE RESPONSIBLE FOR YOUR OWN SAFETY

-If you practice safety, your co-workers will appreciate it and your personal welfare can be protected-

Remember that it is your life that is on the line. You have the right to voice your opinion and concerns about personal safety. Don't hesitate to speak up if you feel uncomfortable with the situation or the circumstance in which you are. Firefighting is inherently hazardous. Discuss your concerns with your immediate supervisor or with a Safety Officer. We are in this together!

FIRE SAFETY BEGINS WITH U

- ✓ Most accidents happen on the smaller fires or on isolated portions of larger fires.
- ✓ Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed results in "flare-ups" or "extreme fire behavior." In some cases, tragedies occur in the mop-up stage.
- ✓ Flare-ups generally occur in deceptively light fuels, such as grass and light brush.
- ✓ Fires run uphill surprisingly fast in chimneys, gullies, and on steep slopes.

TRAINING SPECIALIST MESSAGE

All Lake Incident Trainees

BE ACCOUNTABLE FOR YOUR ASSIGNMENT!!

In order to receive documented credit for your training assignment the following MUST be completed, signed and dated by YOUR EVALUATOR.

- **ICS Form 225**
- **Evaluator's Recommendation Letter**
- **Position Task Book**

**THERE IS NOT A TRAINING SPECIALIST IN BASECAMP.
ENSURE THAT THE DOCUMENTATION IS COMPLETED PRIOR
TO LEAVING THE INCIDENT.**

THE TRAINEE IS RESPONSIBLE FOR COMPLETING THE DOCUMENTATION

***Forms are available in the HR Trailer.
Remember: No documentation – it didn't happen!***

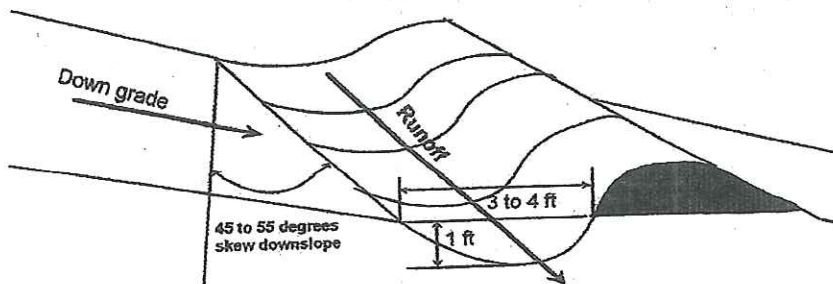

DOZER LINES:

- Dozer lines intersecting with existing roads should be blocked to minimize potential OHV impacts, using barriers such as post and cable, rip rap, etc. In some cases, chunking may be used in to prevent access for unauthorized OHV use.
- Waterbars are to be built on slopes greater than 5 percent and the outlets should drain into green whenever possible.
- Waterbars will consist of a minimum of a 12 inches cut into the firm bed of the control line and have a berm with a compacted height of no less than twelve inches (12") (see figure 1).
- Angle waterbars approximately 30 degrees downslope from horizontal in the natural direction of the force of water off the slope (not the dozer line). The downslope end/outlet of each waterbar must be open and clear of obstructions and should discharge into the green if present.
- Utilize and or improve natural rolls and dips to divert the flow of water whenever possible.
- Hand crews may be used to construct waterbars on slopes greater than 50% (when there is little to no rocks) or in areas too hazardous for safe equipment operation, or in areas where equipment use may further impact environmentally sensitive areas.
- When dozer lines follow a ridge with no visible vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge, except where doing so may impact downslope resources or infrastructure (i.e. roads/trails).
- Remove all trash and equipment associated with suppression activities and mechanized equipment maintenance.

Table 1. WATERBAR SPACING

Gradient	Waterbar spacing
1% - 9%	100 ft.
10% - 19%	75 ft.
20% - 30%	50 ft.
>40%	25 ft.

Figure 1. WATERBAR SPECIFICATIONS

HAND LINES:

- Once suppression containment activities have been achieved, hand lines intersecting environmentally sensitive areas, roads, designated trails, and OHV routes would be repaired. This will include water-barring, pulling berms, and slashing one hundred feet from the point of intersection, or the distance visible from the road or trail, whichever is greater.
- Waterbars for hand lines should be cut to a depth equal to the width of a standard fire shovel.
- Waterbars should be angled downslope from horizontal (approximately 15 to 20 degrees) and natural direction of the force of water off the slope (not the hand line).
- The downslope end/outlet of the waterbar MUST be open and clear of obstructions and should discharge into green when feasible.
- When hand lines follow a ridge where there is no vegetation either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge.
- Utilize and/or improve natural rolls and dips whenever possible.
- In some cases, chunking or berming may be used in combination with the above techniques to prevent access for unauthorized OHV use.
- Remove all trash, equipment, and flagging.
