Incident Meteorologist

WEATHER DISCUSSION:

Typical late-August conditions are anticipated through the operational period. With a marine inversion expected to be around 1000 feet deep, some low clouds and fog will develop on the coastal side of the fire during the night and morning hours. These low clouds and fog will dissipate by late morning, giving way to clear and smoky skies. Afternoon temperatures will be seasonable, generally in the 70s and 80s. Relative humidity will drop to between 30 and 50 percent. Overnight recovery will be moderate to excellent. Ridgetop winds will remain southeasterly with typical diurnal winds at lower elevations.

For Wednesday through the rest of the week, relatively benign conditions are expected with only minor day-to-day changes in the weather.

WEATHER FORECAST:

WEATHER: Mostly clear except for some night and morning low clouds and fog near the coast.

OUTPUTS

FIRE BEHAVIOR

GENERAL: With the threat of thunderstorms gone fire is going back to a fuel driven fire. The fire will continue to spread laterally along the coast ridge. When the fire becomes established in sub-drainages expect short duration, rapid head fire runs. Main fire progression will be to the north and east with active flanking fire.

The top of the marine inversion is sitting at about 1000ft. Expect the fire behavior to diminish below this elevation and remain very active above it.

There is a great deal of ragged burn along Hwy 1, this means there is a high probability of re-burn.

Roll out has the potential to spread the fire across Hwy 1 also, bridge crossings that have vegetation will be a means for the fire to become established west of the highway.

Expect the most active fire behavior from about midnight to about sun up. This means that you could see rapid downhill fire runs and spotting distances up to ½ mile.

Live Fuel moistures in the brush are running average for this time of year but will still burn readily because of the abundant amount of dead fuel under the brush.

Spotting will be mid range less than ¼ mile and from rollout.

Probability of ignition will be 60-70%

SPECIFIC:

Eastside: This whole side of the fire is above the marine layer, expect active flanking fire with isolated torching and short range spotting. With the forecasted winds the N. Coast Ridge Rd should hold the fire in Branch I. The fire has crossed the road at the Branch break and will continue to spread east and south as it finds continuous fuels. Branch V the fire will continue to push Vicente Crk to the south towards Cone Peak. Expect mainly backing fire above the structures at Lucia and the Hermitage.

Westside: This side is below the marine layer. Expect the fire to continue backing down to Hwy. 1. Expect some torching. The main concern for spotting will be rollout. There are many unburned islands and ragged burn areas, which increases the potential for re-burn. Any fire established west of Hwy. 1 will back slowly but has the potential to hook and make up hill runs back to the highway.

AIR OPERATIONS: Smoke and fog have the potential to hang in some drainages and limit operations. The fog can move in very quickly so plan accordingly.

SAFETY

Fire behavior is affected by the marine layer, it is sitting at 1000 ft. Expect increased fire behavior above the marine layer.

The most active fire behavior has been occurring at night, do not become complacent.

Operation Period: 8/25 to 8/26 Shift: 0700-0700

Emphasis on Communications

Hazard Tree Safety

- Inspect area for hazard trees before starting work. Are there trees that have been falling, leaning, hung up, or have broken tops? Are there high-risk species? How long has the fire been burning in the area?
- Identify hazards and fell or avoid the hazard and flag.
- Take down hazard trees only with qualified sawyers and then only if necessary.

MAJOR HAZARDS AND RISKS

---	---	--

Be sure all elements of your safety plan are in place prior to engagement

• Decision Points

- Establish Decision Point(s) when potential exists for your fire situation or weather to degrade.
- Insure that your situation awareness includes monitoring factors that relate to the Decision Point(s) you set.
- Have a planned response in place.
- Do not ignore a Decision Point that has been hit!
