INCIDENT Weather Forecast

FORECAST NO: 9
PREDICTION FOR: 24 hr SHIFT
SHIFT DATE: 8/30/20 to 8/31/20 (0700-0700)
TIME AND DATE
FORECAST ISSUED: 8/29/20 @ 2000

NAME OF FIRE: Dolan

UNIT: USFS

SIGNED:

Richard Thompson
Incident Meteorologist

WEATHER DISCUSSION: The marine inversion (around 1500 feet) will once again impact the fire, producing night and morning low clouds and fog across the west flank of the fire. Otherwise, mostly clear and smoky conditions are expected. With the continued marine influence, relative humidity will be at moderate to high levels below the inversion. However, above the marine inversion, drier conditions will prevail. Minimum humidity, above the inversion, will drop into the teens and 20s with poor overnight recovery. Ridgetop winds will start out easterly, but will shift to a more southwest then northerly direction through the period. Typical diurnal winds will prevail at lower elevations.

For next week, high pressure will gradually build over the area. This will bring warmer and drier conditions to the fire along with little, or no, marine layer stratus or fog.

WEATHER FORECAST:

WEATHER: Mostly clear except for some night and morning low clouds and fog below 1500 FT.

TEMPERATURES: Maximum: Below 1500 FT: 62-74...Above 1500 FT: 82-92.
Minimum: Below 1500 FT: 52-58...Above 1500 FT: 62-70.

HUMIDITY: Minimum: Below 1500 FT: 45-65%...Above 1500 FT: 15-30%.
Maximum: Below 1500 FT: 80-100%...Above 1500 FT: 35-50%.

20 FT WINDS:

OUTPUTS

FIRE BEHAVIOR

GENERAL: The fire will continue to spread laterally along the coast ridge. When the fire becomes established in sub-drainages expect short duration, rapid head fire runs. Main fire progression will be to the south and east with active flanking fire.

The top of the marine inversion is sitting at about 1500ft. Expect the fire behavior to moderate below this elevation and remain very active above it.

The probability of re-burn along Highway 1 remains high.

Roll out has the potential to spread the fire across Hwy 1 also, bridge crossings that have vegetation will be a means for the fire to become established west of the highway.

Expect the most active fire behavior from about midnight to about sun up. This means that you could see rapid downhill fire runs and spotting distances up to ½ mile. The most active area will be below Division X.

Live Fuel moistures in the brush are running average for this time of year but will still burn readily because of the abundant amount of dead fuel under the brush.

Spotting will be mid range less than ¼ mile and from rollout.

Probability of ignition will be 60-70%.

SPECIFIC:

Branch I: Unburned and partially burned stringers of fuel along McWay Ridge have the potential to burn with high intensity and challenge the line. South of Anderson Peak the fire will continue to burn down slope to the southeast. Watch out for the potential that the fire could hook and run back at the line. Along Highway 1 rolling material will continue to challenge containment.

Branch IV: The fire is well established below Cone Peak. From the observed fire behavior the fire has the potential to impact Cone Peak in one to two days. Main fire progression will continue to the east. The fire will continue to flank down slope along Twin Peaks Ridge above Lime Kiln Creek. Expect rapid intense runs in aligned drainages. From Lucia to the Hermitage, expect mainly smoldering and creeping. Along Highway 1 rollout and re-burn will continue to challenge containment.

AIR OPERATIONS: Smoke and fog have the potential to limit operations until about 1200. Fog along the coast may not clear out enough for filling buckets.

SAFETY

Fire behavior is affected by the marine layer, it is sitting at 1500 ft. Expect increased fire behavior above the marine layer.

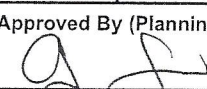

The most active fire behavior has been occurring at night, do not become complacent.

Safety Message

COMPLACENCY

- Defined= A feeling of being satisfied and not wanting to make it better.
- Your goal is to **NEVER** be satisfied with your safety.
- **Keep your edge by asking these 3 questions;**
 1. What could go wrong?
 2. What more can I do to ensure our safety?
 3. What may I be unaware of that could compromise our safety?
- Look up, Look down, and Look all around to maintain your awareness.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN
COMMUNICATIONS
SPOT FIRES

ROLLING MATERIAL
DEHYDRATION
BUCKET DROPS

HEAVY EQUIPMENT
SNAGS
AIR OPERATIONS

Be sure all elements of your safety plan are in place prior to engagement

DRIVING AND FATIGUE

Fatigue can cause us to mentally stray from the task of driving.

It takes only a fraction of a second's distraction to lose control of a vehicle. The faster you are traveling, the faster you get into trouble.

- Make sure you recognize when you are too tired to drive !
- Don't tough it out and put yourself and passengers at risk !
- Slow down, take breaks, talk to your passengers.
- Know your limits and stay out of trouble.
