Fire Weather Planning Forecast For Extreme Southwestern California National Weather Service San Diego CA 126 PM PDT Fri Jul 31 2020 .DISCUSSION... High pressure over the southwest states will continue the hot weather with today expected to the be the hottest day for many areas. Slight cooling will develop near the coast on Saturday, spreading inland for Sunday through much of next week as high pressure weakens and a trough of low pressure moves to near the West Coast strengthening onshore flow. A coastal eddy should develop this weekend and continue at times into Wednesday. This will deepen the marine layer and spread cooling and higher coastal humidity inland. Fire hazards will be elevated in the deserts each afternoon and early evening when gusty west winds of 15 to 30 mph combine with lowest humidity around 10 percent.
