FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 1	TYPE OF FIRE: Wild Fire
FIRE NAME: Apple	OPERATIONAL PERIOD: August 3, 2020 24hr
DATE ISSUED: 8/2/20	TIME ISSUED: 1900
UNIT: CA-LPF	SIGNED: _____ Typed/printed: Dennis Burns/s/

INPUTS

WEATHER SUMMARY: Continued Hot, Dry and Windy

Temps: Day 91-96 Night 67-71

RH: Day 15-20% Night 40-45%

Winds: Day Ridges W 6-10 gusts to 24mph Night Ridges 6-13 gusts to 30mph dropping to 20 after midnight

OUTPUTS

FIRE BEHAVIOR

GENERAL: Most of the fire is now in a backing and flanking alignment. Expect active backing fire some flanking runs and short duration intense head fire runs as the main fire backs into drainage bottoms and aligns with slopes. Fire whirls and dust devils are probable on the lower slopes, the flats and at intersecting drainages. Make sure lookouts have a good view of the fire. When the winds pick up morning and the sky begins to clear expect fire activity to increase

At night, expect the fire to remain active until about 0300 to 0400hrs.

With the dry fuels spotting will be problematic it should be short range less than ¼ mile and from rollout. If the fire develops a large plume, spotting could increase to 1/2mile. 1000hr fuels are at 6%FM and are receptive to spots

Probability of Ignition will be 90-100%

Expect Flame lengths 1-4 feet in the grass, 4-25 feet in the brush.

SPECIFIC:

Branch I: No forward fire progression is expected. Heavier fuels will continue to burnout. Hold over heat will be your biggest source for spotting. If fire becomes establish outside of existing lines expect rates of spread up to 80 chains per hour in the grass.

Branch II: Much of the branch is in a flanking alignment. Roll out will be problematic along the ridge tops. This rollout will be the source of intense head fire runs where there are continuous fuels.

Branch III: Most of the Branch is at the head of the fire. As the fire burns east expect an active backing fire then intense uphill hill head runs as the fire crosses the north to south aligned drainages.

Branch IV: No forward progression expected along the south side of the Branch. In the northeast corner, unburned interior fuels will be a source of spot fires. Depending on how much the fire moves into Branch III overnight you could see some active backing fire.

AIR OPERATIONS: Smoke will limit air operations until the inversion mixes out around 0900hrs.

SAFETY

Light flashy fuels are one of the common denominators that factor into fatal fires. Do not under estimate the grass fuel type.

Fire and COVID-19 Briefing Checklist
