OUTPUTS

FIRE BEHAVIOR

GENERAL: Main fire progression will be to the northeast and to the west towards Birch MT. The fire continues to be in a backing and flanking alignment. Expect active backing flanking runs with short duration intense head fire runs as the main fire backs into drainage bottoms and aligns with slopes. Fire whirls and dust devils are probable on the lower slopes, the flats and at intersecting drainages. Make sure lookouts have a good view of the fire. When the winds pick up in the morning and the sky begins to clear, expect fire activity to increase. At night, expect the fire to remain active as the peak RH occurs early evening then drops again. With the dry fuels spotting will be problematic, it should be short range less than 1/4mile and from rollout. If the fire develops a large plume, spotting could increase to 1/2mile. 1000hr fuels are at 6%FM and are receptive to spots
Probability of Ignition will be 90-100%
Expect Flame lengths 1-4 feet in the grass, 4-25feet in the brush.

SPECIFIC:

Branch I: Expect active flanking and backing fire on the south face of Yucipa Ridge. The fire will spot over the ridge and back slowly into the Forest Falls drainage. Night crews need to assess down canyon winds as the fire is established at the head of the drainage.

Branch III: Expect active fire in the northeast corner. As the fire moves north the fuels begin to become more sparse, this should significantly moderate fire behavior and reduce spotting potential.

Branch V: Most of the Branch is at the head of the fire. The most heat is to the north and south corners of the Branch. Expect active backing fire then intense uphill hill head runs as the fire crosses the north to south aligned drainages.

Branch VII: No forward progression expected along the south side of the Branch. In the northeast corner, unburned interior fuels will be a source of spot fires. Depending on how much the fire moves into Branch V overnight you could see some acting backing fire.

AIR OPERATIONS: Smoke will limit air operations until the inversion mixes out around 0900hrs.

SAFETY

Most of our fire is situated on extremely steep slopes, assess your work area for rollout potential.
