WEATHER DISCUSSION: High pressure will continue to weaken through the operational period. Temperatures will cool about 3-5 degrees compared to Tuesday. Relative humidity will exhibit little change from Tuesday with minimum readings 15-30%. Onshore pressure gradients will be a bit stronger this afternoon which will result in slightly stronger diurnal winds with gusts up to 25 MPH this afternoon and evening in the windier areas.

The cooling trend will continue on Thursday with typical diurnal winds. For Friday through the weekend, high pressure will once again build over the area. This will bring warmer and drier conditions to the incident.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Main fire progression will be to the east Whitewater and to the west towards Birch MT. The fire continues to be in a backing and flanking alignment. Expect active backing and flanking runs with short duration intense head fire runs as the main fire backs into drainage bottoms and aligns with slopes. Fire whirls and dust devils are probable on the lower slopes, the flats and at intersecting drainages. Make sure lookouts have a good view of the fire. When the winds pick up in the morning and the sky begins to clear, expect fire activity to increase. At night, expect the fire to remain active as the peak RH occurs early evening then drops again. With the dry fuels spotting will be problematic, it should be short range less than 1/4 mile and from rollout. 1000hr fuels are at 6%FM and are receptive to spots
Probability of Ignition will be 90-100%
Expect Flame lengths 1-4 feet in the grass, 4-25 feet in the brush.

SPECIFIC:

Branch I: Expect active flanking and backing fire on the south face of Yucipa Ridge (Div F). The fire is holding at the top of Yucipa Ridge, any spotting would be from rollout but would back slowly into the Forest Falls drainage. Night crews need to assess down canyon winds as the fire is established at the head of the drainage.

Branch III: Minimal fire progression is expected in the northeast corner. What fire there is on the Branch is in sparse fuels and shows little potential for spread during the shift.

Branch V: Most of the Branch is at the head of the fire. The most heat is to the west of Millard Canyon. Expect active backing fire then intense uphill hill head runs as the fire crosses the north to south aligned drainages. The fire is burning laterally towards Whitewater and will continue this movement through the shift.

Branch VII: No forward progression expected along the south side of the Branch. In the northeast corner, unburned interior fuels will be a source of spot fires. Depending on how much the fire moves into Branch V overnight you could see some active backing fire.

AIR OPERATIONS: Smoke will limit air operations until the inversion mixes out around 0900hrs.

SAFETY

Most of our fire is situated on extremely steep slopes, assess your work area for rollout potential.

COVID Self-Assessment Questions

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
 - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of Isolation."
2. In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms (fever, shortness of breath, body-aches or coughing (not attributable to allergies)).
 - If so, you cannot report to the workplace until cleared by a medical provider or until 14 days after the last date of exposure. If you develop symptoms, see #1.
3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
 - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
 - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider or until 14 days after date of exposure. If you develop symptoms, see #1.
4. In the last 14 days have you traveled outside your local area?
 - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.

HEALTH AND SAFETY MESSAGE

We Are ALL accountable for SAFE behaviors

INCIDENT: APPLE CA-RRU-096640

DATE: 08/05/2020 TIME: 0700-0700

Major Hazards and Risks: EXTREME FIRE BEHAVIOR AND DANGEROUS HEAT

- **FIRE BEHAVIOR:** Fuels are very receptive to spread. This fire is responsive to extremely dry fuels, topography, and wind.
- **STEEP SLOPES and ROLLING MATERIALS:** Watch your footing in this terrain, watch out for roll out and loose rolling debris.
- **DRIVING:** Slow Down! All roads are open to the public. Headlights on and warning lights as appropriate.
- **HOT WEATHER:** Weather will lead to dehydration, heat illness, serious medical emergencies, and increased core temperature. Maintain proper nutrition and hydration.
- **FATIGUE:** Many of us have been going from fir to fire without much rest. This fatigue will cause poor judgement and decreased work performance, affecting safety of yourself and your crew. Take frequent breaks and rest when you can.
- **HEAVY EQUIPMENT and AIRCRAFT:** Operators have limited visibility and steel tracks can produce new starts on the line. Multiple air resources are operating on the fire. Maintain good situational awareness, LOOK UP, LOOK DOWN, LOOK ALL AROUND.

COVID 19

WEAR A FACE MASK WHEN:

In the general public you cannot maintain 6 foot social distancing

In ICP when you cannot maintain 6 foot social distancing
