OUTPUTS

FIRE BEHAVIOR

GENERAL: WASH, RINSE, REPEAT The main fire progression will continue to the east Whitewater and to the west towards Birch Mtn. The fire continues to be in a backing and flanking alignment. Expect active backing and flanking runs with short duration intense head fire runs as the main fire backs into drainage bottoms and aligns with slopes. Fire whirls and dust devils are probable on the lower slopes, the flats and at intersecting drainages. Make sure lookouts have a good view of the fire. When the winds pick up in the morning and the sky begins to clear, expect fire activity to increase.

At night, expect the fire to remain active as the peak RH occurs early evening then drops again.

With the dry fuels spotting will be problematic, it should be short range less than 1/4mile and from rollout.

1000hr fuels are at 6%FM and are receptive to spots

Probability of Ignition will be 80-90%

Expect Flame lengths 1-4 feet in the grass, 4-25feet in the brush.

SPECIFIC:

Branch I: Expect active flanking and backing fire on the south face of Yucipa Ridge (Div F). The fire is holding at the top of Yucipa Ridge, any spotting would be from rollout but would back slowly into the Forest Falls drainage. Night crews need to assess down canyon winds as the fire is established at the head of the drainage.

Branch III: Minimal fire progression is expected in the northeast corner. What fire there is on the Branch is in sparse fuels and shows little potential for spread during the shift.

Branch V: Most of the Branch is at the head of the fire. The most heat is to the west of Millard Canyon. Expect active backing fire then intense uphill hill head runs as the fire crosses the north to south aligned drainages. The fire is burning laterally towards Whitewater and will continue this movement through the shift.

Branch VII: No forward progression expected along the south side of the Branch. In the northeast corner, unburned interior fuels will be a source of spot fires. Depending on how much the fire moves into Branch V overnight you could see some active backing fire.

AIR OPERATIONS: Smoke will limit air operations until the inversion mixes out around 0900hrs.

SAFETY

Most of our fire is situated on extremely steep slopes, assess your work area for rollout potential.

INCIDENT: APPLE CA-RRU-096640

DATE: 08/06/2020 TIME: 0700-0700

Major Hazards and Risks: DRIVING, AIR OPERATIONS, HEAVY EQUIPMENT USAGE

- **DRIVING:** Practice defensive driving techniques while driving roads
- **AVIATION OPERATIONS:** Follow aviation watch-out situations on IRPG page 44
Ensure positive communications with all air resources
- **HEAVY EQUIPMENT:** Operators have limited vision. Have proper communications or use hand signals. Work outside of the 100' safety circle and never work below heavy equipment.
- **HAZARD TREES:** Hazard tree safety guidelines on page 22 in the IRPG, post lookouts or use a spotter in mop-up area with personnel. Establish trigger points when winds increase.
- **FATIGUE:** Many of us have been going from fire to fire without much rest. This fatigue will cause poor judgement and decreased work performance, affecting safety of yourself and your crew. Take frequent breaks and rest when you can.
- **FIRE LINE HAZARDS:** Watch for rolling material and debris, avoid radiant heat by wearing your PPE appropriately, follow powerline safety protocols found on page 24 in the IRPG
- **INDIRECT FIRELINE:** LCES found on page 6 in the IRPG, Review strategy/indirect attack found on page 77 in the IRPG

Lookouts, **C**ommunication, **E**scape routes, **S**afety zones
