## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 46	<b>TYPE OF FIRE:</b> Wildfire
<b>FIRE NAME:</b> Creek Fire	<b>OPERATIONAL PERIOD:</b> Day Shift 10/23/20 0700-1900

### INPUTS

**WEATHER SUMMARY:**                      **\*\*Slight cooling trend to begin\*\***  
 \*See Fire Weather Forecast for Specifics\*

#### FUELS:

Grass	GS1, GS2
Shrub	SH1
Timber	TU5, TL2, TL4, TL7
<b>FDFM (1hr)</b>	5
<b>10-hr (%)</b>	6
<b>100-hr (%)</b>	4
<b>1000-hr(%)</b>	6
<b>Live Fuels</b>	2/3 cured

**Duff depth under pine is deep (12").**

**With the drought conditions, live fuels are available to burn**

#### TOPOGRAPHY:

- Smoke inversion height (above sea level): ~7,000 ft.
- Elevation: 3,000-9,500. Higher elevations are starting to see cold nighttime temps. Nighttime humidity recoveries will begin to rise (40%).
- Slopes: 10%-50%. With general winds being low, wind direction and speed are being determined by terrain.

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

- Heavy fuels are very dry and can hold heat. Expect interior creeping and smoldering in the duff and heavy fuels.
- Fire behavior will moderate slightly with the changing weather. However, fire will continue to smolder and creep; in areas of heavy fuel loadings near heat potential for single tree torch and spotting.
- Nighttime humidity will be high enough (above 40%) to dampen fire behavior, taking longer to heat up during the day, and shortening the burn period.
- Smoke will continue to shelter the fire, slowing fire behavior below the inversion.

**Probability of Ignition (4-8,000'):**  
40%/60% (Unshaded/Shaded)

**Spotting Potential:** Minimal

**Spotting Distance:** .10-.20 mile (short range)

Fuel Model	FL (Ft.)	ROS (Ch/Hr)	NFDR Index	Value	%
TU5	6-11	6-8	<b>ERC</b>	85	98th
TL7	2-4	6-12	<b>BI</b>	67	90th
SH1	2-4	<b>4-8</b>	High Sierra RAWS (44520)		

##### SPECIFIC:

- DIV M: Fire near Junction Bluffs backing towards the Middle Fork and Fish Creek. Backing South of Pincushion Peak. Surface spread, single tree torching, and short-range spotting as fire spreads Southeast, west of Lake Edison along the Onion Springs OHV road.
- DIV J - Fire continues to move slowly up in the wilderness and rocks at higher elevations following green vegetation and timber stringers. In the Middle Fork of San Joaquin River near the Lion Fire there is potential for fire to spread east.
- DIVS E – DIVS I: Larger interior fuels and deep duff are continuing to consume and burn out. Expect to see this continue, with creeping/smoldering near interior islands of fuel or mosaics.
- DIVS (C–A, Z–N): Very little activity near line with scattered heat throughout interior of divisions, creeping and smoldering where fuels exist. Potential torching and spotting if exposed to the sun.

### SAFETY

*The current weather pattern has been persistent, resulting in similar fire behavior from day to day. The extremely dry fuels will still support active fire under the right conditions. Continue to monitor fire behavior, read the fuel and weather to be prepared for this.*

## ***SAFETY MESSAGE***

*Fire fighter safety comes first on every fire, every time*

---

We are **ALL** accountable for **SAFE** behaviors  
For Day Operations: **October 23, 2020**

### **Driving in residential area:**

- Watch for public and or other resources, in and around ECCO Camp.
- PLEASE DRIVE SLOW through areas with homes and pedestrians.

### **Smoke Exposure:**

- Symptoms of over exposure start with headaches and visual impairment, then impaired decision making.
- Smoke is a complex mixture of carbon dioxide, water vapor, **carbon monoxide**, particles, hydrocarbons and other organic chemicals, nitrogen oxides, and trace minerals. Fine particles are the principal pollutant of concern from wildfire smoke for short-term exposures (hours to weeks).
- Individuals are advised to limit their physical exertion if exposure to high levels of smoke cannot be avoided. This may be a challenge given the work demand. So another option might be to take more frequent breaks.
- Smoke is irritating to the eyes, nose, and throat, and its odor may be nauseating. Studies have shown that some people exposed to heavy smoke have temporary changes in lung function, which makes breathing more difficult.
- This can cause headaches, reduce alertness, and aggravate a heart condition known as angina. Fine particles are able to travel deeply into the respiratory tract, reaching the lungs. Inhaling fine particles can cause a variety of health effects, including respiratory irritation and shortness of breath, and can worsen medical conditions such as asthma and heart disease.

### ***Techniques can help reduce the exposure of personnel to heavy smoke, such as:***

- Rotating people out of the heaviest smoke area may be the single most effective method.
- Locate spike camps in areas that are not prone to inversions or outside the inversion impact areas.
- Please refer to your IRPG Pages 30 & 31

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

## Human Resources Message

### LISTEN

A wise man once told me that we have 2 ears  
and 1 mouth for a reason – to listen twice as  
much as we speak; and if you notice, our ears  
always stay open, while our mouths have a  
hinge so it can be closed.

Also, note that "listen" and "silent" are spelled  
with the same letters. Is that just a coincidence,  
or is it that you need to be silent in order to be  
able to really listen? Check that out and think  
about it!

Let's try really listening to each other more and  
see if we can resolve our issues and/or concerns  
that we may have much faster.
