Management Objectives:

- Ensure safety of emergency responders & public utilizing strategies & risk management processes with the highest probability of success.
- Protect natural and cultural resources, commercial timber and critical infrastructure while utilizing resource and agency advisors.
- Repair areas disturbed by fire suppression activities to minimize potential for excessive erosion and impacts to natural and cultural resources.
- Foster and maintain good relationships with local cooperators, stakeholders and public while providing coordinated, accurate and timely information.
- Effectively manage cost and track accountable property to assist with financial reconciliation.

Control Objectives

- Keep the fire south of the South Fork of Merced River and the Minarets Range.
- Keep the fire south and west of Pond Lily Lake and the Silver Divide.
- Keep the fire within the existing fire footprint.

General Situational Awareness:

Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees.

In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family and to ensure all employees return home safely, make sure to practice social distancing.

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

RED FLAG WARNING THROUGH TUE

Breezy NE winds will increase Tue morning trailing the passage of an upper level disturbance with peak gusts through midday around 30-40 mph across exposed slopes, ridges and within aligned NE to SW drainages. Lower elevations will experience mainly terrain driven winds, becoming up-slope/up-canyon in the afternoon as stronger NE winds weaken across higher elevations. Humidity will trend higher across upper elevations Tue while lower slopes will trend drier. A warming trend begins with afternoon highs in the 50s to 60s. Cold temperatures will continue Tue night with lows in the mid 20s to near 40 with the redevelopment of valley inversions and more lingering drainage smoke into Wed morning.

TUESDAY: Passing morning clouds and breezy at elevation. Becoming mostly sunny in the afternoon.

Precipitation Chance: 0%

Stability: Weak valley inversion, generally below 2 kft in sheltered drainages.

Location	Maximum Temperature (F) & Minimum Humidity (%)		20-ft Winds (mph)
Slopes & Valleys	60s	20-30%	Variable downslope 3-5 in sheltered drainages, becoming WSW upslope/canyon in the afternoon 5-10, gusts 15-20. Exposed NE drainages, winds NE 5-10, gusts 15-20.
Ridges & Peaks	50s	25-35%	NE 15-20, gusts 30-40 through midday exposed upper slopes & ridges. NE winds decrease into afternoon 10-15 mph, gusts 25.

TUESDAY NIGHT: Mostly clear, cool with poor humidity recovery.

Precipitation Chance: 0%

Stability: Stronger nighttime inversion, below 4 kft. More smoke accumulation in drainages.

INPUTS

WEATHER SUMMARY: *See Fire Weather Forecast for Specifics*
** RED FLAG WARNING – MONO WINDS (DAY 2)**

FUELS:

Grass	GS1, GS2
Shrub	SH1
Timber	TU5, TL2, TL4, TL7
FDPM (1hr)	2
10-hr (%)	3
100-hr (%)	8
1000-hr(%)	6
Live Fuels	2/3 cured

Duff depth under pine is deep (12").

With the drought conditions, live fuels are available to burn.

TOPOGRAPHY:

- Smoke inversion height (above sea level): N/A
- Elevation: 3,000-9,500. Higher elevations will see cold nighttime temps. Nighttime humidity recovery to remain low (20-30%). Mt Tom LO had a low of 3% last night (~5-6am).
- Slopes: 10%-50%. With elevated NE winds near ridgetops, wind direction and speed potential greatest where in alignment of slope and fuels .

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Mono Winds will continue today, night Rh recovery little to none, and persist thru Tuesday night.
- Heavy fuels will burn readily and hold heat. Resistant to control. Increase in activity in interior creeping and smoldering in the duff and heavy fuels.
- Expect fire behavior with stronger winds and lower Rh to remain very active, where fire activity is present. Extreme fire behavior possible. Potential torching and group tree crowning, spotting up to 0.5 mile.
- Nighttime humidity will drop (down to 20%) and not diminish fire activity overnight. Shorter daylengths will continue to reduce active burn period.

Probability of Ignition (4-8,000'): 90%/80%
(Unshaded/Shaded)

Spotting Potential: Minimal-Low

Spotting Distance: .10-.30 mile (short range)

Fuel Model	FL (Ft.)	ROS (Ch/Hr)	NFDR Index	Value	%
TU5	6-11	6-8	ERC	86	98th
TL7	2-4	6-12	BI	86	93rd
SH1	2-4	4-8	High Sierra RAWS (44520)		

SPECIFIC:

- DIV M: Expect continued surface spread, single and group tree torching, and short-range spotting as fire spreads W-SW with strong winds, low Rh and fuel moistures. Potential for small crown runs where aligned. Most of fire in DIV M will push back onto the main fire. Areas west, north, and east of Vermillion Camp, north of Edison Lake will remain most active with spread in the Graveyard Meadows area. Spread dependent on terrain will primarily to the SW-W.
- DIV J – Little fire activity, continues to move slowly up in the wilderness. Edged in by rocks at higher elevations, following green vegetation and timber stringers. Expect increased activity, very low potential to move.
- DIVS E – DIVS I: Larger interior fuels and deep duff are continuing to consume and burn out. Expect to see this continue, with increased consumption with lower Rh and stronger winds. Creeping/smoldering near interior islands of fuel or mosaics, torching possible. Area in DIV E, watch out for area by Little Shuteye Peak where heat exists.
- DIVS (C-A, Z-N): No known activity near line except near Cascade Point, but with scattered heat throughout interior of divisions, creeping and smoldering where fuels exist. Potential torching and spotting if exposed to the sun.

SAFETY

With Red Flag conditions, base all actions on current and expected fire behavior. Even in areas where there is little to no fire activity. Plan for worst case scenarios. New starts and spotting are not planned.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

We are **ALL** accountable for **SAFE** behaviors
For Day Operations: **October 27, 2020**

As we are exiting our WEATHER EVENT of
HIGH WINDS, COLD TEMPERATURES, and RED FLAG WARNINGS

LOOK UP, DOWN, AND AROUND

As conditions have changed through the wind event and the Red Flag warnings, the fire environment may have changed. When we re-engage into our work assignments take a moment to LOOK UP, DOWN and AROUND.

➤ **Weather Environment**

- Even if the warning expires, weather conditions will likely be just below critical thresholds.

➤ **Fireline:**

- RH- Critically low humidity based on local thresholds. No recovery expected in near future.
- Battling or shifting winds as the weather changes again.
- Re-burn potential, with additional drying of fuels
- Widow makers might be hung up

➤ **Traveling Roadways:**

- Be heads up as trees may have come down in roadways. When coming around a blind corner you may be surprised by a tree in the road.

Refer to Incident Response Pocket Guide "LOOK UP, DOWN AND AROUND".

The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode.
