Creek (North Zone) Fire Weather Forecast

FORECAST NO: 42
PREDICTION FOR: Monday-Monday Night
SHIFT DATE: 10/18-10/19 0700-0700
FORECAST ISSUED: 1800 Sunday October 18th

FIRE: Creek
UNIT: CA-SNF-001391
Incident Meteorologist: Christian Cassell 907-250-5541

DISCUSSION: Temperatures remain very warm for mid-October with very dry conditions persisting. Diurnal slope winds will prevail with light west to northwest winds aloft. Temperatures will remain about 10 degrees above normal through Thursday and humidity will remain low with poor to moderate humidity recovery. Smoke will largely follow the diurnal wind regime near the surface, but any smoke columns produced will follow the westerly to northwesterly transport winds. A significant pattern change to cooler and cloudier conditions is possible by next weekend with low chances for showers especially toward the Sierra Crest.

WEATHER FORECAST (TODAY):

WEATHER: Smoky and hazy. Sunny skies otherwise.

MAX TEMP: 81-88° below 4,000 feet 68-76° 6,000-8,000 feet
73-81° 4,000-6,000 feet 61-70° above 8,000 feet

MIN RH: 10-18%.

HAINES INDEX: 5

WIND (20 FOOT): *Below 7,000-ft elevation:* Downslope/Downvalley 2 to 5 mph early becoming Upslope/Upvalley or West 5 to 8 mph with afternoon gusts around 15 mph.
Above 7,000-ft elevation: West to Southwest 5 to 10 mph. Gusts 15 to 20 mph mid- to late afternoon.

MIXING HEIGHT/INVERSION: Smoke inversion 9,000 ft AGL or up to 15,000 ft MSL.

TRANSPORT WIND: West becoming North to Northwest 5 to 10 mph.

FORECAST (TONIGHT):

WEATHER: Smoke. Clear skies otherwise.

MIN TEMP: 35-60°, coldest in sheltered valleys and warmest in the thermal belts.

MAX RH: 25-40%, except up to 60% in sheltered valleys.

WIND (20 FOOT): *Below 7,000-ft elevation:* Southwest 5 to 10 mph with gusts to 15 mph becoming Downslope/Downvalley 2 to 6 mph.
Above 7,000-ft elevation: Northwest 5 to 10 mph.

MIXING HEIGHT: Falling to 200 ft after sunset.

OUTLOOK (Tuesday/Tuesday Night – 5,500 Feet): Continued very warm and dry with poor RH recovery. Smoky and hazy skies; otherwise clear. Highs 70-80° and Lows 35-60°, coldest in sheltered valleys and highest in the thermal belts. Min RH 10-18% and Max RH 25-40%, except up to 70% in sheltered valleys. Winds Upslope/Upcanyon or West to Northwest 4-9 mph by afternoon with afternoon gusts to 15 mph. Downvalley/Downslope winds 3 to 7 mph developing toward sunset and continuing through the overnight.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 42	TYPE OF FIRE: Wildfire
FIRE NAME: Creek Fire – NORTH ZONE	OPERATIONAL PERIOD: Day Shift, October 19, 2020
DATE ISSUED: October 18, 2020	TIME ISSUED: 2000
UNIT: Sierra NF	SIGNED:  Typed/printed: Patrick Doyle, FBAN-t

INPUTS

WEATHER SUMMARY: Smoky and hazy. Sunny skies otherwise.

SOW	Elevation	TEMP	Min RH	WIND			Precip Prob
<i>Smokey in the morning, 15% clouds/smoke afternoon</i>	Below 4,000'	81-88	10-18% lowest toward the Sierra Crest and highest toward lowest elevations		speed	gusts	Dir
	4- 6,000'	73-81		Terrain	2-5	15	Upslope
	6-8,000'	68-76		Ridgetop (above 7,000')	5-10	15-20	W to SW
	Above 8,000'	61-70					
0%							

Smoke inversion 9,000 ft AGL

Haines: 5

* See attached Fire Weather Forecast.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Expect interior creeping and smoldering in the duff and heavy fuels.
- Falling activities that drop snags or other limbs in creeping or smoldering fuels will ignite easily with critically dry conditions.
- Fire above inversion could become active during the day with clearer skies and brisker winds.
- Heavy fuels still very dry and holding heat.
- Expect spots outside the perimeter or new starts to rapidly to spread, torch and spot readily. This is elevation and fuel type dependent, higher elevations – spot established in timber litter, creeping, torching, and spotting again with moderate surface spread. Lower elevations – spot established in grass/brush, rapid surface spread with torching, and spotting.

Fuel Conditions: ERC at record level for this time of year for Predictive Services Area Central Sierras (SC02). Setting near maximum's for 100hr & 1000hr Fuel Moistures.

Minarets RAWS	44203	ERC-G	87	Probability of Ignition (4-8,000')
DFDM (1hr)	4	BI-G	63	80% / 70% (Unshaded/Shaded)
10-hr (%)	4	SC-G	9	Fine Dead Fuel Moisture
100-hr (%)	6	IC-G	38	4%/5% (Unshaded/Shaded)
1000-hr(%)	6	Critically Dry Fuels?	Yes	Spotting potential: 0.1 mi.

SPECIFIC:

- Record setting September and unseasonably warm and dry October, heavy fuels are running in the 90th to 97th percentile range. Very receptive to holding heat and burning easily. Stumps, trees and down logs will continue to consume.
- Watch for torching and spotting in interior pockets of fuels, particularly near control lines.
- SE end of Div J – heat along south edge of 2018 Lions fire has little to some potential to spread east along the south edge of Lion fire above the Middle Fork of San Joaquin River.
- Div J - Northside of fire continues to move slowly up into the wilderness and rocks at higher elevations following green vegetation and timber stringers. Decrease in opportunities as percent rock increases with elevation, as it moves North.
- Div E/F/G/I - Very little activity with scattered heat throughout divisions, creeping and smoldering where fuels exist, and torching in cluster . Watch out for hot ash pits, and fire weakened trees.
- Maintain awareness of areas where fuel continuity from leaf/needle drop could contribute to potential reburn and connecting hot areas to unburned fuels on fire perimeter and interior.
- All areas in control, patrol status and repair along westside of the North Zone have very little fire activity, but still plenty of heat interior and potential for flare-up.

AIR OPERATIONS:

Smoke inversion in San Joaquin River will continue to impair visibility and air support to resources on the ground.

SAFETY

Snags/ trees can burn in the upper portions.
Look up! Be mindful of overhead hazards.
Just because there is no fire in the lower trunk doesn't mean it is safe.

6. Work Assignments:

DIVISION I:
Task: Continue to hold and mop up control lines south of Red Top Mountain down to DP57. Continue snagging hazard trees in work areas and adjacent to the fire lines.
Purpose: Limit fire spread to the north and west protecting values at risk in those areas.
End State: Direct attack was successful stopping fire progression to the north and west.

DIVISION J:
Task: Monitor fire activity from the air and IR as smoke conditions allow. Identify opportunities to limit fire spread towards Red's Meadow and Devils Postpile. Protect private inholdings and government property where fire conditions allow and resources can safely engage.
Purpose: Protect private inholdings with minimal fire damage and there is a high probability of success.
End State: Reduce fire spread towards Yosemite National Park, Devils Postpile and Red's Meadow. Damage to private and government property is minimal.

6. Work Assignments:

Task: Mop up and patrol fire edge, mop up around Central Camp. Continue road improvement, snagging hazard trees in work areas and adjacent to the fire lines. Continue structural protection throughout division. Backhaul hose and trash. Identify suppression repair needs and accomplish objectives as established by suppression repair plan.

Purpose: Protect life and property with minimal fire spread threatening North Fork and Bass Lake and other private inholdings. Keep roads open for fire traffic. Provide safe access for firefighting resources, cooperators, and the public.

End State: Control lines are completed and no threat of fire spread. Bass Lake and adjacent communities are not impacted. No damage to private property. Major roads are clear of hazards. Firefighters, cooperators, and the public can travel major roads with minimal risk. Roads are kept open and access into the fire area is not compromised.

Incident:
Creek Fire North Zone CA-SNF-001391

Date:
10-19-2020 to 10-19-2020

Operational Period:
Day

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

Major Hazards and Risks:

Camp Safety: Make sure you're in a designated Sleeping Area, no sleeping around vehicles. Do not sleep under any Oak Trees, tree limbs are very unstable.

Cumulative Fatigue: This is a very active fire season with folks working long hours on back-to-back assignments or extensions. This can lead to serious cumulative fatigue. Monitor yourself, your subordinates, and others for fatigue. Take frequent short rest breaks, eat balanced meals, and get as much quality sleep as possible. Fatigue can cause us to mentally stray from the assigned work task and or driving task.

Hydration: By the time your body tells you it's time to drink – you are already dehydrated. On a regular basis drink fluids to maintain an appropriate energy level for any expected work assignment. Remember, you are the only one that knows your limitations

SUPPRESSION REPAIR

- Stay alert while working around heavy equipment.
- Communicate clearly with operators and Heavy Equipment Bosses.
- Maintain safe working distances.
- Avoid working below dozers and watch out for rolling materials. Maintain accountability of personnel.
- Know where the Falling Teams are working and communicate with the Falling Boss.
- Maintain 2 ½ times the tree height during falling operations.
- **Driving Hazards:** Watch for public traffic, single-lane roads, no road shoulders, steep side slopes, and blind corners are some of the driving hazards you face each day. Maintain a safe speed for the road conditions you are traveling on.
- **Heavy equipment:** When meeting heavy trucks, like water tenders and lowboys, always give them the inside of the road – don't force them to use the outside shoulder which may be soft and give way under the extra weight.
- **After a shift of hard work,** reaction times are slower. Make sure all your mitigations and safety protocols are in place before coming off the line and driving back to camp.
- **Backing Up:** Objects in the mirror are closer than they appear. Your mirrors have a margin of error; don't rely on them alone. Look over your shoulder before backing up. Use a spotter. Get out and look around to determine extent of danger zones, uneven ground or obstacles.

Team Safety Officers: John Nickey SOF1, Matthew Lipson SOF2 (t)

INCIDENT ACTION PLAN RISK ASSESSMENT (ICS 215A)

1. Incident Name:		2. Incident Number:		3. Operational Period:		4. Location:

Prepared By (Communications Unit Leader)				Incident Location				Sierra National Forest			
Kody Kerwin Comm Unit (916) 203-6647 <i>Kody Kerwin</i>				County: LAC State: CA				Latitude: " N Longitude: W			

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

DAILY COVID QUESTIONS:

Have all employees apply this self-assessment prior to entering any work location every day.

Can you answer “YES” to either question? If so, report to the Medical Unit immediately:

- 1) In the last 14 days have you had a fever or chills, shortness of breath, body-aches, coughing or new loss of taste or smell (not attributable to something else, e.g. allergies)?
- 2) In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms.

• Cough	• Muscle or Body Aches	• Fatigue
• Shortness of breath	• Sore Throat	• Nausea/Vomiting
• Fever (100.4 or more) or Chills	• Cough	• Diarrhea
• New loss of Taste or Smell	• Headache	• Congestion/Runny Nose

Persons who are displaying symptoms that the medical unit feels are suspicious for COVID-19 will be tested. This will be coordinated by the incident COVID taskforce and the local public health department.

If a person has mild symptoms that might be caused by other conditions (like heat illness, dehydration, etc.), the medical unit may isolate, treat and observe for up to 24 hrs. to determine if COVID testing is needed.

Human Resource Message

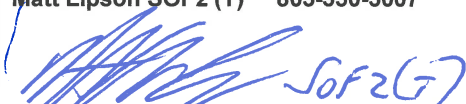

FIRE

- Fatigue..... Be aware of fatigue having a negative impact on your conduct and speech
- Integrity..... Integrity and Honesty are vital on a fire. If you mess up, fess up, whatever you did can most likely be fixed if you report it as soon as you are aware of it.
- Respect..... Treat others as you would like to be treated
- Example..... Set an example. Realize you influence others around you, therefore, always conduct yourself in a professional and competent manner, but still have fun!

Tony Torres, HRSP – (505)239-0041 (text/call) or Anthony.torres@usda.gov

Medical Incident Report					
FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY. FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.					
Use the following items to communicate situation to communications/dispatch.					
1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report) <i>Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."</i>					
2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure. <i>Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."</i>					
Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>				
Nature of Injury or Illness & Mechanism of Injury	Brief Summary of Injury or Illness <i>(Ex: Unconscious, Struck by Falling Tree)</i>				
Transport Request	Air Ambulance / Short Haul/Hoist Ground Ambulance / Other				
Patient Location	Descriptive Location & Lat. / Long. <i>(WGS84)</i>				
Incident Name	Geographic Name + "Medical" <i>(Ex: Trout Meadow Medical)</i>				
On-Scene Incident Commander	Name of on-scene IC of Incident within an Incident <i>(Ex: TFLD Jones)</i>				
Patient Care	Name of Care Provider <i>(Ex: EMT Smith)</i>				
3. INITIAL PATIENT ASSESSMENT: Complete this section for each patient as applicable (start with the most severe patient)					
Patient Assessment: See IRPG PAGE 106					
Treatment:					
4. TRANSPORT PLAN:					
Evacuation Location (if different): (Descriptive Location (drop point, intersection, etc.) or Lat. / Long.) Patient's ETA to Evacuation Location:					
Helispot / Extraction Site Size and Hazards:					
5. ADDITIONAL RESOURCES / EQUIPMENT NEEDS:					
<i>Example: Paramedic/EMT, Crews, Immobilization Devices, AED, Oxygen, Trauma Bag, IV/Fluid(s), Splints, Rope rescue, Wheeled litter, HAZMAT, Extrication</i>					
6. COMMUNICATIONS: Identify State Air/Ground EMS Frequencies and Hospital Contacts as applicable					
Function	Channel Name/Number	Receive (RX)	Tone/NAC *	Transmit (TX)	Tone/NAC *
COMMAND					
AIR-TO-GRND					
TACTICAL					
7. CONTINGENCY: Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead.					
8. ADDITIONAL INFORMATION: Updates/Changes, et c.					
REMEMBER: Confirm ETA's of resources ordered. Act according to your level of training. Be Alert. Keep Calm. Think Clearly. Act Decisively.
