## CRITICALLY LOW HUMIDITY CONTINUES

High pressure will strengthen over northern CA Sat as a broad upper level low approaches the southern CA coast. This pattern will continue northerly general winds locally early Sat, then winds become more ESE into Sat evening as the upper low moves onshore to south. High clouds will increase from the south Sat night. Unseasonably warm high temperatures will continue this weekend with critically low humidity in the single digits to teens before slight recovery in the afternoon and evening as up-drainage flow develops. **NOTE:** *General drainage flow directions: ENE down-drainage, up-drainage WSW to SSW.*

**SATURDAY:** Mostly clear, hazy & smoky. Continued warm & very dry. Up-drainage flow by midday.  
**Stability:** Morning inversion, generally below 7 kft with smoke. Visibility improvement into afternoon.

Location	Maximum Temperature (F) & Minimum Humidity (%)		20-ft Winds (mph)
Low Slopes & Valleys	70s	10-20%	Down-drainage 2-5 early morning, gusts 10. Winds becoming up-drainage 6-10, gusts 15-20.
Ridges & Peaks	60s	5-15%	North 5-10, gusts 13-18 early morning. Winds becoming NNE-ESE 5-10, gusts 15 afternoon.

**SATURDAY NIGHT:** Mostly clear, then increasing high clouds after midnight.  
**Stability:** Stronger inversions in drainages. Mid-slope thermal belt 5-7 kft.

Location	Minimum Temperature (F) & Maximum Humidity (%)		20-ft Winds (mph)
Low Slopes & Valleys	35-45	15-25%	Up-drainage early evening 3-7, gusts 15. Winds becoming down drainage 2-5, gusts 10 by midnight.
Ridges + Peaks	40s to near 50	9-19%	E to ESE 10-15, gusts 20.

### WEATHER OUTLOOK:

- SUN – WED: Continued warm, very low RH & poor recovery. Waves of passing mid/high clouds.
- THU – FRI: **Elevated fire danger potential.** Increasing pre-frontal SW winds. More clouds, cooler.

# FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 54	<b>TYPE OF FIRE:</b> Wildfire
<b>FIRE NAME:</b> Creek Fire	<b>OPERATIONAL PERIOD:</b> Day Shift 10/31/20 0700-1900
<b>DATE ISSUED:</b> 10/30/2020	<b>TIME ISSUED:</b> 1830
<b>UNIT:</b> Sierra NF (CA-SNF-001391)	<b>SIGNED:</b> <i>1st Byron R. Kimball, FBAN</i>

## INPUTS

**WEATHER SUMMARY:**      **\*See Fire Weather Forecast for Specifics\***  
**\*\* EXTENDED PERIOD OF CRITICALLY LOW HUMIDITY \*\***

### FUELS:

Grass	GR1
Shrub	SH1
Timber	TU1, TU5, TL2, TL4, TL7
FDPM (1hr)	3
10-hr (%)	4
100-hr (%)	9
1000-hr (%)	8
Live Fuels	2/3 cured

**Very low fuel moistures (FM) increase spotting receptiveness.**

**Seasonal low FM and amplified by critically low Rh.**

### TOPOGRAPHY:

- Elevation: 3,000-9,500. Higher elevations will see cold nighttime temps. Nighttime humidity recovery to remain extremely to very poor (9-25%).
- Slopes: 10%-50%. Expect NNW-WNW winds near ridgetops, and terrain driven elsewhere with wind direction and speed greatest when slope and fuels align.

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

- All fuel classes very dry, dead fuels are all single digit, live fuel moistures are at critical levels, entire fuel profile available
- Heavy fuels will burn readily and hold heat. Resist control. Creeping and smoldering in the duff and heavy fuels. Some individual & group tree torching contributing to spotting.
- Expect fire behavior where alignment of slope and fuels align, and potentially spotting ahead up to 0.10 mile (528 ft.).
- Nighttime humidity recovery will do little (down to 9% ridges) to moderate fire activity and diminish overnight activity. Shorter day-lengths will continue to reduce active burn period.

<b>Probability of Ignition (4-8,000'):</b> 100%/60% (Unshaded/Shaded)					
<b>Spotting Potential:</b> Minimal-Low					
<b>Spotting Distance:</b> .10-.20 mile (short range)					
Fuel Model	FL (Ft.)	ROS (Ch/Hr)	NFDR Index	Value	%
TU5	6-11	6-20	ERC	79	90th
TL7	2-4	4-12	BI	74	77th
SH1	2-7	6-25	High Sierra RAWs (44520) Years 2000-2020 (present)		

#### SPECIFIC:

- Timber Knob Area – Little fire activity, edged in by rocks at higher elevations where fire is following green vegetation and timber stringers. Low to moderate activity in clumps of remaining island of fuels, very low potential to move.
- Middle Fork San Joaquin: Activity near confluence of Middle Fork and Fish Creek, spotting and spreading intermittently through the rocks and patchy fuels. Individual and group tree torching and spotting factor for all of DIV M; smoldering/creeping in areas with less fuels or slope.
- Pincushion: Activity continues with individual and group tree torching being problematic. Ground spread dependent on alignment with slope and wind.
- Vermillion Cliffs: Areas north and east of Vermillion Camp, north of Edison Lake will remain most active with spread to the NE. Spread dependent on terrain will primarily to the E-NE.
- DIVS E – DIVS I: Little activity, with few interior fuels and deep duff consuming and burning. Expect to see this continue, with increased consumption with lower Rh and dry fuels. Area in DIV E, smoldering and creeping in area by Little Shuteye Peak.
- DIVS (C-A, Z-N): No activity near line except what is near Cascadel Point, but with scattered heat throughout interior of divisions, creeping and smoldering where fuels exist.

## SAFETY

*Snags and green trees present a hazard with long term fire in the timber.*

## Creek Fire

### Transition To A New team

You have have been working for a very professional team with California Incident Management Team 1, My Leaders intent as Your Safety Officer is for you to show Alaskan Team Black the same respect and share and provide all of your corporate knowledge with the incoming team members.

Lots of folks demobing and checking into the incident. Make sure all new folks to the division get a thorough, site specific in-brief when they arrive.

### Transportation

One way traffic control on Kaiser Pass road.

See traffic plan instructions in IAP.

Drive slow and expect opposing traffic that might not know radio protocols.

Power company and their contractors have been observed driving fast throughout the incident. Be diligent even on open roads.

Watch speeds when returning to camp from Branch XX area. Long downhill runs on lower part of Kaiser pass require concentration to keep speeds from creeping up.

As roads are becoming icy, good practice is to send a STEN, HEQB, TFLD or equipment swamper to run point on the icy roads to make it's safe for transports, water tenders, strike teams of engines and all other equipment to mobilize to prevent any accidents.

### Weather

Very low RH's predicted to last throughout the week.

Drink plenty of fluids. Even though mild temperatures seem comfortable, the dry air will exacerbate dehydration.

Days are getting warmer, but nights are still chilly. Dress accordingly.

### Fireline

Life jackets are required for all personnel traveling in boats (Silver Group).

Snags are still a huge concern. Please review hazard tree safety and mitigation again. Check your worksite each day for new conditions.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

**Special Instructions:**

**Medical Emergency Procedures:**

Follow the Medical Incident Report (MIR) on the back of the IAP

**Fireline/ Spike Camp Medical Transports and Emergencies:**

**Green** - Provide immediate patient care, Notify Division Medic or EMT on Tac. Medic or EMT will contact MEDL by phone at earliest convenience. Minimize, non-critical, operational radio traffic on Command and maintain situational awareness.

**Yellow/Red**- Contact Communications on Command with a Medical Incident Report.

**ICP**- Call 911 and contact MEDL as soon as possible.

**Covid- 19 Tip of the day:** Wash your hands, don't touch your face!

## AK IMT COVID-19 Purpose and Intent

The Alaska IMT is reminding firefighters to apply the core values of wildland fire management community of “Duty, Respect, and Integrity” to our COVID mitigations. Core values include:

- **Duty:** To provide a workforce safe from known hazards such as disease transmission, and keep us, our fellow firefighters, and the public safe, on and off the clock.
- **Respect:** To demonstrate respect to oneself and to each other by taking routine precautions as guided, such as wearing a mask and social distancing.
- **Integrity:** To do the right thing when at home, while travelling, or on assignment. Undertake the precautions to keep ourselves and the rest of the workforce healthy and able to respond. Ensure we are not the source of an outbreak within the public we are assigned to protect.

### Essential Mitigations:

- **Pre-Screening and Regular Monitoring:** Individuals should measure temperature and assess symptoms each day prior to starting work. Ideally, temperature checks should happen before the individual enters the facility or interacts with others on staff or the crew.
- **Social/Physical Distance:** The employee should maintain 6 feet and practice social distancing as work duties permit in the workplace.
- **Wearing a Mask:** Employees should always wear a facemask or face covering when social distancing cannot be maintained. When facemasks cannot be worn during arduous work tasks, social distancing practices should be implemented.
- **Disinfect and Clean:** Routinely clean and disinfect all areas, particularly “high touch surfaces” such as engine compartments, bathrooms, common areas and shared electronic equipment.
- **Empower** all individuals to ask co-workers to follow social distancing guidelines.

### Concept of “Module as One:”

By insulating as a unit, crews and modules can limit outside viral exposure, safely complete operational tasks in closer proximity, and ride in vehicles without face coverings when working within their “**Module as One**” concept:

- As often as practical, the same team members should travel in the same vehicle, work together in the same space, and ensure module members are conscientious regrading mitigations.
- Identify select individuals on a crew or module that will interact at briefing or with the public, ensuring this person relies on social distancing, wears a cloth face covering, and practices hand hygiene during or after every interaction.
- When the “Module as One” has been established, minimize contact with public and outside community. This is to protect every crew member, their family, and the community we serve.
- Team members, crews, and other resources should use a “Module as One” approach to insulate as one unit and reduce exposure to the public and other crews. If each member within a unit is monitored, screened, and healthy, then proximity, when necessary, is not an issue.
