12. Prepared By: Print Name: John Mosley Date/Time Prepared: 10/02/2020 0500 PDT		13. Approved By: Print Name: Mike Minton Signature: _____									
14. Date/Time Submitted: 10/02/2020 0600 PDT		15. Primary Location, Organization, or Agency Sent To: CA-OSCC									
16. State: CA	17. County / Parish / Borough: Tulare		18. City:								
19. Unit or Other:	20. Incident Jurisdiction: CA-SQF	21. Incident Location Ownership (if different than jurisdiction): CA-SQF									
22. Latitude/Longitude: Latitude: 36° 15' 18" Longitude: 118° 29' 48"		23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:									
		24. Legal Description: Principal Meridian: Township: Range: Section: 1/4 Sec: of 1/4 Sec:									
25. Short Location or Area Description (list all affected areas or a reference point): 25 miles north of Kernville, CA			26. UTM Coordinates: Zone: Easting: Northing:								
27. Note any geospatial data available (indicate data format, content, and collection time information and labels): All geospatial data and products are uploaded to FTP site. https://ftp.nifc.gov/public/incident_specific_data/calif_s/!2020_Incidents/CA-SQF-002622_SQF%20COMPLEX/GIS/Products/											
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents): Active											

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

**Group Torching
Spotting
Backing**

Narrative:
Branch I: Smoldering, creeping, interior islands continue to burn out. Two Giant Sequoias have fire in the tops and continue to drop burning embers around structures.

Branch II: Interior islands actively burning and continue to threaten established containment lines.

Branch III: Stronger than forecasted east winds affect the fire; actively backing and spotting across Garfield Creek. The north side is actively backing with multiple group tree torching. Spotting distance is 300 to 400 feet.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

**Timber (Litter and Understory)
Chaparral (6 feet)
Timber (Grass and Understory)**

Narrative:
Fuel models located within the fire area vary with elevation and some have limited fire history. These include stands of dense mixed conifer with heavy brush below timber lines. The McNally burn scar (2002), Pier burn scar (2017), and Schaefer burn scar (2017) contain a mixture of grass, brush and snags which are all supporting fire spread. Fire is burning within areas of significant tree mortality contributing to significant fire resistance to control efforts.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

Damage inspection has been completed. The Final Numbers are 10 single residences damaged, and 173 Destroyed, 2 Other minor structures damaged, and 59 destroyed.

Mandatory Evacuations Locations:

- Alpine Village**
- Cedar Slope**
- Doyle Springs**
- Ponderosa**
- Pyles Boys Camp**
- Redwood Drive**
- Sequoia Crest**
- East of Sequoia National Forest Boundary, from the intersection of Hwy 190 and Balch Park, Bear Creek Road and**
- Rancheria Fire Road**
- Upper Tule River Corridor: Camp Nelson, Pierpoint, Coy Flat, Mountain Aire, and points between**

<p>33. Life, Safety, and Health Status/Threat Remarks: Safety and health threats to suppression personnel includes long travel routes of narrow mountain roads through rural, farming, and ranching communities with limited visibility due to smoky conditions. Congested roadways and heavy traffic in and around the incident. Drought, bug kill, & fire Weakened trees all have accident potential. Steep, terrain will bring footing issues, access issues creates alignment and safety issues. The changing weather conditions will affect the work zones.</p>	<p>34. <p>35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern): Very poor humidity recovery was observed overnight with light down drainage winds. The humidity at most observing stations remained under 20 percent. Stations near 6000 feet, within the thermal belt, remained near 10 percent. The inversion is expected to lift by 1100 Friday with a return to well above normal temperatures. Concern is for another day with high temperatures into the 90s across the lower elevations, to the upper 70s at elevations of 8000 feet (10 degrees above the seasonal norm). Humidity minimums of near 10 percent are favored with terrain driven winds, speeds of 5 to 15 mph. Transport winds aloft are expected to be out of the east to southeast. This favors high concentrations of smoke on the northwest side of the incident area (Branches II and III). Where the air is clear of smoke, deeper mixing is expected, favoring better ventilation, and supporting greater fire column growth where there is active fire. A Haines of 5 is forecast.</p>																																					

<p>36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:</p> <p>12 hours: Almost all threats from fire have been abated. Threats from secondary fire effects such as hazard trees and soil erosion remain across the entire fire.</p> <p>24 hours: Same as 12 hour.</p> <p>48 hours: Same as 12 hour.</p> <p>72 hours: Same as 12 hour.</p> <p style="text-align: center;">Continued secondary threats, however, hazard tree removal efforts to expedite</p> <p>Anticipated after 72 hours: repopulation will reduce a significant number of hazard trees adjacent to values at risk.</p>

<p>37. Strategic Objectives (define planned end-state for incident): Strategic Framework</p>
--

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

Implement a full suppression strategy on the Castle and Shotgun Fires. Values at risk include human safety, private property and residences, infrastructure, utilities, developed sites, facilities, Giant Sequoia groves and archaeological and cultural sites. Apply tactics that offer the highest probability of success.

Control Objectives

To prevent the fires from spreading to private property, surrounding communities, and values at risk, keep the fire:

· **North of Durrwood Camp and the Tule River Reservation to protect communities and infrastructure along the**

Kern River and within the Reservation.

· **West of Toowa Range to Kingfisher Ridge to 22S05 Road to protect recreational and administrative infrastructure.**

· **South Hwy 198 to Lost Canyon to Whitney Meadow to limit fire growth to the north.**

· **East of Springville to Blue Ridge to South Fork to protect communities west of the fire.**

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours: **Wilderness values within the Sequoia National Park.**

24 hours: **Same as 12 hour threats.**

48 hours: **Same as 12 hour threats.**

72 hours: **Same as 12 hour threats.**

Anticipated after 72 hours: **Same as 12 hour threats.**

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

- 1 Type 1 Fuel Tender**
- 2 BCMG**
- 2 ORDM**
- 4 SOF2**
- 3 Excavators**

12 hours:

24 hours: **Same as 12 hour.**

48 hours: **Same as 12 hour.**

72 hours: **Same as 12 hour.**

Anticipated after 72 hours: **Same as 12 hour.**

40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:

- 1) critical resource needs identified above,
- 2) the Incident Action Plan and management objectives and targets,

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

3) anticipated results.
 Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.
The fire behavior on the east, south and west sides are expected to be minimal. The uncontained fires edge to the North continues to burn actively. Heavy vegetation and steep terrain create a high resistance to control and make it difficult to access the fires edge. Management Action Points and responses to the MAPs are being developed. Objective concerns are high due the remoteness of fire, proximity to the Giant Sequoia groves, steep terrain, and other areas popular with tourism.

41. Planned Actions for Next Operational Period:
Branch I and II - Resources will continue to monitor, and hold completed lines. Watch for and quickly attack any spot fires on the east side of the Kern River Canyon. We will be completing some suppression repair and mitigating hazards affected repopulation.

Branch III

Develop Management Action Points and seek opportunities to contain the fire.

42. Projected Final Incident Size/Area (use unit label – e.g., "Acres", "Square Miles"): **160,000**

43. Anticipated Incident Containment or Completion Date: **10/10/2020**

44. Projected Significant Resource Demobilization Start Date: **10/07/2020**

45. Estimated Incident Costs to Date: **\$76,073,628.00**

46. Projected Final Incident Cost Estimate: **\$80,000,000.00**

47. Remarks (or continuation of any blocks above – list block number in notation):

Block #42 Projected Final Size and #43 Anticipated Containment Date are dependent on resource availability of which we are currently limited with several unstaffed divisions due to fire requiring a shift in tactics from building containment line to point protection. Critical needs for resources continue and if received a sooner containment date and projected final size could be estimated.

Incident Name	Suppression Strategy	Area	Area Measure	% Ctn/Comp	% Ctn/Comp Measure	Est. Cost to Date	Est. Comp Date	Perimeter
CASTLE	Full Suppression	152,385	Acres	61	Percent	76,073,628	10/10/2020	
SHOTGUN	Full Suppression	841	Acres	0	Percent		10/10/2020	

49. Resources (summarize resources by category, kind, and/or type; show # of resources on top 1/2 of box, show # of personnel associated with resource on bottom 1/2 of box):
