10. Incident Complexity Level: Single <input checked="" type="checkbox"/> Complex		11. Report Time Period: From Date/Time: 10/05/2020 1800 PDT To Date/Time: 10/06/2020 0545 PDT									
12. Prepared By: Print Name: John Mosley Date/Time Prepared: 10/06/2020 0545 PDT		13. Approved By: Print Name: Mike Minton Signature: _____									
14. Date/Time Submitted: 10/06/2020 0548 PDT		15. Primary Location, Organization, or Agency Sent To: CA-OSSC									
16. State: CA	17. County / Parish / Borough: Tulare	18. City:									
19. Unit or Other:	20. Incident Jurisdiction: CA-SQF	21. Incident Location Ownership (if different than jurisdiction):									
22. Latitude/Longitude: Latitude: 36° 15' 18" Longitude: 118° 29' 48"		23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:	24. Legal Description: Principal Meridian: Township: Range: Section: 1/4 Sec: of 1/4 Sec:								
25. Short Location or Area Description (list all affected areas or a reference point): 25 miles north of Kernville, CA			26. UTM Coordinates: Zone: Easting: Northing:								
27. Note any geospatial data available (indicate data format, content, and collection time information and labels): All geospatial data and products are uploaded to FTP site. https://ftp.nifc.gov/public/incident_specific_data/calif_s/!2020_Incidents/CA-SQF-002622_SQF%20COMPLEX/GIS/Products/											
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents): Active Flanking Backing Spotting Narrative:											

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

Branch I: Smoldering, creeping, interior islands continue to burn.

Branch II: Smoldering, creeping, interior islands burning out.

Branch III: Active flanking, backing, and short range spotting in Division U. The fire has spotted north of the South Fork of the Kaweah River, and is actively flanking. Active flanking towards Sheep Mountain and Hockett dip site.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

Timber (Litter and Understory)
Chaparral (6 feet)
Timber (Grass and Understory)

Narrative:

Fuel models located within the fire area vary with elevation and some have limited fire history. These include stands of dense mixed conifer with heavy brush below timber lines. The McNally burn scar (2002), Pier burn scar (2017), and Schaefer burn scar (2017) contain a mixture of grass, brush and snags which are all supporting fire spread. Fire is burning within areas of significant tree mortality contributing to significant fire resistance to control efforts.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

Damage inspection has been completed. The Final Numbers are 10 single residences damaged, and 173 Destroyed, 2 Other minor structures damaged, and 55 destroyed.

Mandatory Evacuations Locations:

-Alpine Village
-Cedar Slope
-Pyles Boys Camp
-Redwood Drive
-Sequoia Crest
-East of Sequoia National Forest Boundary, from the intersection of Hwy 190 and Balch Park, Balch Park Road and Blue Ridge Road, Bear Creek Road and Rancheria Fire Road (Excluding parts of Bear Creek homes under a Warning)
-Upper Tule River Corridor: Mountain Aire, and points between

Voluntary Evacuation Warning:

-Coy Flat
-Mineral King
-Silver City
-Remainder of South Fork Drive
-Camp Nelson
-Pier Point
-Ponderosa
-Doyle Springs
-Blue Ridge Drive between Balch Park Road and

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

<p>33. Life, Safety, and Health Status/Threat Remarks: Safety and health threats to suppression personnel includes long travel routes of narrow mountain roads through rural, farming, and ranching communities with limited visibility due to smoky conditions. Congested roadways and heavy traffic in and around the incident. Drought, bug kill, & fire Weakened trees all have accident potential. Steep, terrain will bring footing issues, access issues creates alignment and safety issues. The changing weather conditions will affect the work zones.</p> <p>There is potential to threaten the communities of Three Rivers and the structures in the South Fork drainage.</p>	<p>34. Life, Safety, and Health Threat Management:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 90%;"></th> <th style="width: 10%; text-align: center;">Active?</th> </tr> </thead> <tbody> <tr><td>A. <p>35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern): Poor humidity recovery was observed overnight. RH values at most observing stations remained under 30 percent. Concerns remain focused on the persistent dry conditions, lack of rainfall, and low humidity. This dryness is compounded by the above normal temperatures.</p> <p>Light transport winds are also resulting in high concentrations of smoke, limiting visibility. Over the next 3 to 5 days, temperatures are forecast to trend lower as the High pressure system responsible for the heat weakens. In spite of the cooling it is expected to remain dry.</p> <p>A more significant change in the weather pattern is anticipated between Oct 9th and the 11th with the passage of a cold front. As these transitions take place, higher wind speeds are expected. This will also favor a wholesale improvement in the visibility as the ventilation increases.</p>																																					

<p>36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:</p> <p>12 hours: The smoke inversion over the fire continues to moderate fire behavior. No fire progression is expected.</p> <p>24 hours: There is potential for fire growth in the north, including the potential to threaten the communities of Three Rivers and the structures in the South Fork drainage.</p> <p>48 hours: Same as 24 hour.</p> <p>72 hours: Same as 24 hour.</p> <p>Anticipated after 72 hours: Continuation of suppression repair and indirect containment line construction in Division T/U.</p>

<p>37. Strategic Objectives (define planned end-state for incident): Strategic Framework</p> <p>Implement a full suppression strategy on the Castle and Shotgun Fires. Values at risk include human safety, private property and residences, infrastructure, utilities, developed sites, facilities, Giant Sequoia groves and archaeological and cultural sites. Apply tactics that offer the highest probability of success.</p> <p>Control Objectives</p> <p>To prevent the fires from spreading to private property, surrounding communities, and values at risk, keep the fire:</p> <ul style="list-style-type: none"> -North of Durrwood Camp and the Tule River Reservation to protect communities and infrastructure along the Kern River and within the Reservation. -West of Toowa Range to Kingfisher Ridge to 22S05 Road to protect recreational and administrative infrastructure.

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

-South of Mineral King Road to Lost Canyon to Whitney Meadow to limit fire growth to the north.
-East of Springville to Blue Ridge to South Fork to protect communities west of the fire.
38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:
12 hours: Possible threat to structures in the South Fork drainage, including the Hockett Meadows Ranger Station. Wilderness values within the Sequoia National Park.
24 hours: Possible threat to structures in the South Fork drainage, critical infrastructure on Case Mountain. Several sequoia groves and wilderness values within the Sequoia National Park.
48 hours: Same as 24 hour threats.
72 hours: Same as 24 hour threats.
Anticipated after 72 hours: Same as 24 hour threats.
39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order: 1 medical support trailer 1 ABRO 2 BCMG 2 ORDM
12 hours:
24 hours: Same as 12 hour.
48 hours: Same as 12 hour.
72 hours: Same as 12 hour.
Anticipated after 72 hours: Same as 12 hour.
40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to: 1) critical resource needs identified above, 2) the Incident Action Plan and management objectives and targets, 3) anticipated results. Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts. The fire behavior on the east, south and west sides are expected to be minimal. The uncontained fire's edge to the north continues to burn actively. Heavy vegetation and steep terrain make it difficult to access the fires edge and contain. Management Action Points and responses to the MAPs have been developed. Objective concerns are high due the remoteness of fire, proximity to the Giant Sequoia groves, steep terrain, threats to structures, and other areas popular with tourism.
41. Planned Actions for Next Operational Period: Identify containment opportunities in the northwest corner of the fire. Continue repopulation and suppression repair efforts.

Incident Status Summary (ICS-209)

Incident: **SQF COMPLEX**

42. Projected Final Incident Size/Area (use unit label – e.g., “Acres”, “Square Miles”): 200,000
43. Anticipated Incident Containment or Completion Date: 11/01/2020
44. Projected Significant Resource Demobilization Start Date: 10/29/2020
45. Estimated Incident Costs to Date: \$83,239,607.00
46. Projected Final Incident Cost Estimate: \$100,000,000.00

47. Remarks (or continuation of any blocks above – list block number in notation):
Block #42 Projected Final Size and #43 Anticipated Containment Date are dependent on resource availability of which we are currently limited with several unstaffed divisions and due to fire burning in wilderness with limited access in difficult terrain. Critical needs for resources continue and if received a sooner containment date and projected final size could be estimated. Estimate for Block #42 is in acres.

Incident Name	Suppression Strategy	Area	Area Measure	% Ctn/Comp	% Ctn/Comp Measure	Est. Cost to Date	Est. Comp Date	Perimeter
CASTLE	Full Suppression	158,104	Acres	65	Percent	83,239,607	11/01/2020	
SHOTGUN	Full Suppression	841	Acres	100	Percent		10/04/2020
