SQF COMPLEX - INCIDENT OBJECTIVES

Strategic Framework

Implement a full suppression strategy on the Castle and Shotgun Fires. Values at risk include human safety, private property and residences, infrastructure, utilities, developed sites, facilities, Giant Sequoia groves and archaeological and cultural sites. Apply tactics that offer the highest probability of success.

Leaders Intent

Provide the highest level of customer service to all involved with, or impacted by, the Castle and Shotgun Fires. Ensure transparent, timely and accurate communication at all levels of the incident. All incident assigned personnel should be prepared to take the appropriate actions regarding:

- Professional behavior, conduct and timely/effective communications.
- Personal safety and the safety of others, includes driving slowly, safely and defensively.
- Fatigue management by taking breaks and maintaining work/rest cycles.
- Minimize risk and limit exposure to COVID-19 by daily screening, minimizing large group settings, social distancing, wearing face coverings, hand washing and practicing module of one concept.
- Effective management of incident costs by planning strategies and tactics toward a high probability of success in meeting incident objectives.

Management Objectives

- Provide for firefighter and public safety through hazard recognition and application of the risk management process.
- Reduce the threat to private property, residences and infrastructure through the application of effective suppression tactics.
- Reduce the impacts to Wildemess values by ensuring minimum impact suppression tactics (MIST) are applied. Utilize historic fire control lines, trails, streams, ridges and natural barriers when possible for control lines.
- Coordinate suppression activities with assigned incident resource advisors to minimize adverse effects to natural and cultural resources, on riparian areas, watersheds, Spotted Owl and Goshawk PACs, Fisher, Little Kern Golden Trout, Mountain Yellow Legged Frog, and Sierra Nevada Bighorn Sheep Habitats.
- Mop up as safety allows to reduce the threat of fire spread outside of containment lines.
- Conduct suppression repair activities to prevent long term damage to resources.
- Utilize suppression resources in the removal of fuel hazards in support of community repopulation.

Control Objectives

To prevent the fires from spreading to private property, surrounding communities, and values at risk, keep the fire:

- North of Durnwood Camp and the Tule River Reservation to protect communities and infrastructure along the Kern River and within the Reservation.
- West of Toowa Range to Kingfisher Ridge to 22S05 Road to protect recreational and administrative infrastructure.
- South Hwy 198 to Lost Canyon to Whitney Meadow to limit fire growth to the north.
- East of Springville to Blue Ridge to South Fork to protect communities west of the fire.

WEATHER DISCUSSION:

*****Above Normal Temperatures*****

Unseasonably warm weather is expected through Saturday with temperatures 10 degrees above the seasonal norm...highs ranging from the lower 90s along the lower slopes between 3000-5000 feet in elevation to the upper 70s near 8000 feet. This above normal warmth will be coupled with very low humidity, minimums near 10 percent during the day with generally poor humidity recovery at night. Transport winds aloft are extremely light, favoring higher concentrations of smoke. However, daytime instability favors deeper mixing which supports greater column growth where there is active fire.

SKY/WEATHER TODAY (FRIDAY): Mostly Sunny. Valley inversion lifting between 1000-1100, but expect subsidence inversion aloft to maintain smoky conditions in Branch II and III.

MAX TEMPERATURES / MIN RELATIVE HUMIDITY:

3000 FT:	87 to 92 degrees (Down 2) / 12 to 18% (Little Change)
5000 FT:	84 to 89 degrees (Down 2) / 10 to 15% (Little Change)
7000 FT:	73 to 78 degrees (Down 2) / 8 to 12% (Little Change)

20-FT WINDS:

<u>Slope/Valley:</u>	Winds upslope/upvalley 4 to 8 mph gust up to 15 mph in the afternoon.

FIRE BEHAVIOR

GENERAL: With warm and dry conditions, expect continued active smoldering and visible flames on heavier fuels. No forward fire progression is expected and any spot fires should be easily handled by direct attack. Most of our fire continues to be in a backing alignment. All fuels are available to burn and will be receptive to spotting. Expect single and group tree torching in the denser stands of timber and brush fields in the interior. Spotting distances will be mid range 200 to 300 feet. Rates of spread on slopes will be 8-12 chains per hour with 4-8 foot flame lengths in the timber. Backing fire, multiple forward rate of spread by .3. If you see clear skies expect the fire behavior to increase as the smoke has been moderating the fire behavior.

Branch I: No forward fire progression expect mainly smoldering and creeping in the interior. Interior pockets of heat and snags have the potential to throw spots over established lines. Still a good amount of jackpots of heavy fuels burning interior at the Branch I II break. Potential for Division Y/W to be smoked out during the shift.

Branch II: Most of the Branch is in a backing alignment. No forward fire progression is expected. In Div. D there is some heat near the line above Camp Nelson. there is potential for rollout and the fire to burn back on itself. Div. T keep a head up for holdover spot fires, any spots will have a slow rate of spread. Also, there is a potential for reburn in areas that weren't completely consumed during burn ops.

Branch III: The fire has backed down to and spotted across the South Fork of Kaweah Drainage. As of 1700 yesterday the spot was approx. 4 acres. Div. U has potential to make a slope aligned run towards Homers Nose. Rock screens will slow fire spread however there is a significant amount of bug kill timber on the upper third of the slope which will increase spotting and the potential for crown runs.

Night: Expect the fire to remain active in thermal belts or until the RH recovers above 25-30% in Branch II expect the RH to drop after midnight and fire behavior to increase in the interior. No forward fire progression expected on any division.

AIR OPERATIONS

Inversion layer with smoke will be present until at least the 1000-1200hr time period.
Do not base your plan on air they might not be able to get there.

SAFETY

Fire will become active at RH% below 25% and clear skies. Slope and heavy fuels will enhance fire intensity.

Remember tragedies often occur on quite sections of line.

Fuels and Fire Behavior Advisory

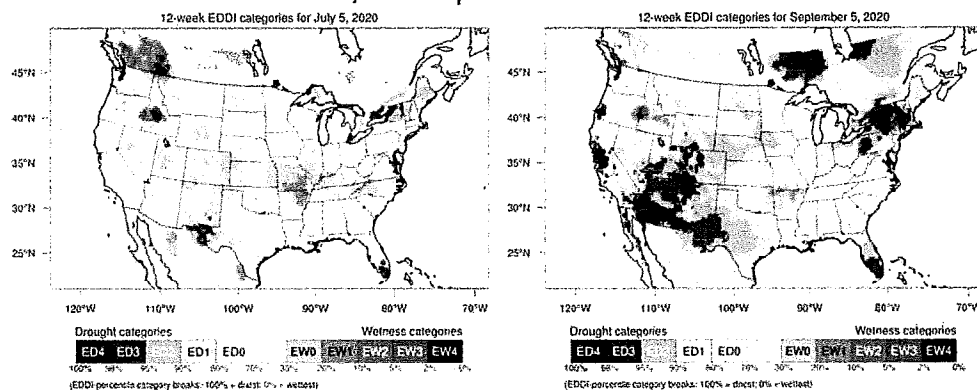

Southern California Geographic Area

September 11, 2020

Subject: Live and dead fuels are extremely dry across the mountain predictive service areas (PSAs). Extreme fire behavior and rapid rates of spread are occurring in these areas, even when winds are light. The chance for extreme fire behavior will increase over the next couple of months as winds increase and become more prevalent. Fire behavior will remain elevated across the mountains of southern and central California, until significant rainfall occurs.

Discussion: A progressive pattern brought near to slightly below normal temperatures from June through August 11th and fire activity was below normal. High pressure became strong and dominant from August 12th into September, bringing well above normal temperatures and very low humidities. Live and dead fuel moisture over the mountains are much lower than normal, due to the absence of monsoonal showers and thunderstorms, combined with very warm and dry conditions.

Difference from normal conditions: Rainfall was 50% to 70% of normal this year in the Sierras, while the rest of the mountainous areas in Southern California received slightly above normal rainfall. Due to hot and dry conditions and little to no rainfall this summer, the dead fuel moistures across all mountain areas are near or below the 3rd percentile and live fuel moistures are between 50% and 70%. ERC's are running near or above the 97th percentile. Computer models indicate high pressure will dominate through at least the end of October, so the potential for extreme fire behavior will increase.

The Evaporative Demand Drought Index (EDDI) is an experimental drought monitoring and early warning guidance tool. It examines how anomalous the atmospheric evaporative demand (E_0 ; also known as "the thirst of the atmosphere") is for a given location and across a time period of interest. The figures show the 12 week period preceding July 5 (left) and Sep 5 (right).

<https://psl.noaa.gov/eddi/>

Concerns to Firefighters and the Public:

- Firefighters need to be prepared for possible extreme fire behavior and dangerous rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All firefighters need to remain aware of current and expected weather and burning conditions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at: <https://gacc.nifc.gov/oscc/predictive/weather/index.htm>.
- Red Flag conditions from the National Weather Service and weather at: <https://www.wrh.noaa.gov/fire2/cafw/>.
- Monitor the Santa Ana Wildfire Threat index during the season at: <https://fsapps.nwgc.gov/psp/sawti>

Area of Concern: The mountains are the driest area in the region and are the main concern heading forward. The associated PSAs are SC01, SC02, SC03, SC09, SC10, and SC11.

COVID-19 SAFETY MESSAGE

Protect Your Health, Protect the Health of Others

Wear a Face covering: Masks help prevent people who have COVID-19 from spreading the virus to others. Wearing a mask will help protect people around you.

Performing hand hygiene: When soap and water are available all fire personnel should wash their hands often for at least 20 seconds, especially after coughing or sneezing.

Following respiratory hygiene/cough etiquette principles: Cover your cough, wash your hands.

Keeping hands away from face: Fire personnel should practice not touching their eyes, nose, or mouth. While it may seem simple, germs often spread this way.

Cleaning and disinfecting the environment appropriately: Clean all high touch surfaces such as radios and door knobs with disinfectant.

STOP THE SPREAD OF GERMS
Help prevent the spread of respiratory diseases like COVID-19.

**When in public,
wear a cloth face
covering over your
nose and mouth.**

If you are from a state that requires a COVID test prior to re-entry please call the COVID information line (**949-769-0466**), or email Nathan.sill@usda.gov at least 48 hours prior to demob.

The **Demob Process** includes turning in all of your checked-out equipment (including anything from Supply and Communications), getting inspected at Ground Support (if needed according to your resource type and agency affiliation), completing a finance package, and completing the travel information on the Demob Form QR code. **If you skip a step, you will not be released from the incident!** For more instructions, see the pages related to Finance and Demob in this IAP.

Training Specialist Message

The Incident Training Specialist will be performing duties remotely.

COVID-19 Reminders

Make prevention part of your routine!

WILDLAND FIRE COVID-19 SCREENING TOOL

Today or in the past 24hrs, have you had any of the following symptoms?

Symptoms:

- Cough?
- Shortness of breath or difficulty breathing?
- Fever? Chills?
- Muscle pain, outside that expected for your level of exertion?
- Sore throat?
- New loss of taste or smell?
- Excessive fatigue?
- Headache?
- Congestion or runny nose?
- Nausea or vomiting?
- Diarrhea?

Take temperature with no-touch thermometer, if available

What to do if you are experiencing COVID-19 symptoms?

- Put on a mask if not already wearing one.
- Notify your supervisor and self-isolate from others immediately.
- Notify Line Medic or Medical Unit to evaluate symptoms.
- Document contacts you had the two days before your symptoms began.
- Wait for further instructions from the Medical Unit and COVID Team.

How do I know if I am a 'close contact' of a person who is presumptive positive or has tested positive for COVID-19?

For COVID-19, a **close contact** is anyone who was within 6 feet of an infected person for at least 15 minutes. An infected person can spread COVID-19 starting from 48 hours (or 2 days) before the person had any symptoms or tested positive for COVID-19.

*Approximately 40-50% of people with COVID-19 will not show any symptoms. It's important to utilize preventative strategies (masks, spacing, hand hygiene) prior to someone displaying symptoms.

Do your part to minimize the spread of COVID-19 and reduce your risk of exposure.

- Maintain 6 ft or greater spacing between you and others.
- Wear a mask, especially when unable to maintain social distancing, anytime indoors, in public settings, including briefings.
- Frequently wash your hands with soap and water or a hand sanitizer that is at least 60% alcohol.
- Wash/sanitize frequently touched surfaces.

The best way to prevent illness and continue to fight fire is to avoid being exposed to this virus.

Federal Interagency and Tribal Lands Suppression Repair Guidelines

Scan QR code for detailed Suppression Repair Plan

Fire Line

- Restore natural contour.
- To prevent erosion: construct waterbars, pull back vegetation with excavator, use straw bale, etc.
- De-compact fire line, pull back vegetation with excavator.
- Attempt to conceal or hide the entrance & exit using the landscape & available materials.
- To prevent access to Off Highway Vehicles (OHV) where fire lines intersect roads or trails, block intersections with large rocks, large trees, or walls of brush.
- Concentrations of slash along commonly used areas such as roadways, developed recreation areas, & structures should be chipped & dispersed.

Heli-spots, Drop Zones, Sling & Medi-vac Sites

- Use standards like fire line repair to repair these activity areas. If available, use cleared vegetative material for soil cover. Place waterbars where appropriate.

Line in or through Watercourses

- Restore preexisting streamflow & remove any deposited debris not present before suppression.

Water Drafting Sites

- Restore water sources used or developed as draft sites to original condition. Remove any dams, dikes, or other impoundments created for fire suppression activities. Backhaul any trash.

Concentrations of Slash

- Concentrations of slash created by fire suppression activities along commonly used areas such as roadways, developed recreation areas, & structures should be chipped & spread across the landscape. Chip piles should not exceed six inches in depth. Lop & scatter concentrations of slash not to exceed 18 inches in height.

Roads

- Road repair should follow the existing design of the road prism. Repair damage to pavement, gates, cattle guards, & culverts. Remove soil pushed into cattle guards.
- Remove all slash & debris created by fire suppression from culvert inlets and outlets.
- Clean & grade ditch lines, rolling dips, & lead off ditches to repair function.

- Physically close off all unauthorized routes/roads opened during suppression
- Place rocks / logs to disguise the entrance to prevent unauthorized OHV.

Litter, Trash, and Flagging Removal

- Remove all litter, trash, & flagging from all suppression areas; this includes micro-trash.

Wilderness & Wilderness Study Areas (WSA)

- Areas of fire suppression in wilderness will follow many of the *General Repair Guidelines* previously discussed, but with an emphasis on restoring wilderness aesthetics & characteristics. One way to think of this is to “make it look like we were never there.”
- The use of mechanized equipment may require special authorizations to repair the area. Verify with the appropriate land manager before use of equipment in wilderness or WSA's.

Tree Disposal from Dozer-lines & Roadside Hazard Mitigation

- Reduce fuel loadings along access roads, accessible dozer-lines & cleared areas following suppression.
- Fallen trees will be yarded & decked.
- Do not stockpile fuels against standing live or dead trees.
- Locate decks in disturbed areas where trees can be safely processed.
- Use low impact machinery on improved surfaces.
- Locations for roadside hazard tree & fire line tree disposal will be determined by assigned Resource Advisors or agency personnel.
- The locations will be recorded on the Suppression Repair Map, which will be provided to the assigned Equipment Managers & equipment operators completing this work.
- Do not enter known archeological sites with heavy equipment or skid logs across arch sites.
- Felled trees within archaeological sites must be left in place unless they can be removed without skidding (i.e. full suspension).
- Where it is feasible, equipment can reach into an arch site and pluck the tree (or portion of a tree) up without skidding.
- If it is necessary for equipment to pass through a known site, raise the blade or other attachments while within the site boundaries.

Contact Agency Personnel or Resource Advisors with any questions or for additional solutions.

REMOTE DEMOB PROCEDURES

We are doing a remote demob of resources; **please complete all steps below on your smart phone/tablet and through email.** There will be no ICS-221 for you to obtain physical signatures; the ICS-221 will be completed in a virtual environment.

After your supervisor makes you available for demob:

Step 1: On the date you are scheduled to demob, ensure all supplies and equipment are returned to **SUPPLY** and **COMMS**, as appropriate.

Step 2: Email your remaining CTRs and shift tickets to **FINANCE**, including the travel day CTR and shift ticket, to 2020.castle.finance@firenet.gov. Please be prompt in submitting your final finance package; you will not be released from the incident until you get the final documentation and Finance notifies Demob.

Step 3 (Only applies if you are at Porterville-ICP): Proceed to **GROUND SUPPORT** for vehicle inspection. AFTER inspection, proceed to **WEED WASH** (adjacent to Ground Support). Additionally, visit **FINANCE** to close your financial package.

Step 4: Scan the QR Code below, click on "Demob Folder" and enter your DEMOB travel information in the form provided.

Failure to follow all of these steps will keep you attached to this fire and subsequently unavailable for future fires.

Note: Email all non-finance documentation to 2020.castle.plans@firenet.gov (Unit Logs, ICS-213s, etc.). Take a picture and attach to email.

Questions? Contact DEMOB at 951-235-1568.
