 - o Monache Mountain, Monache Meadow and other archaeological and cultural sites; and
 - o Freeman Giant Sequoia Grove and other sequoia groves.
- Continue to hold and establish control lines that are safe for firefighters and provide a high probability of success to keep the fire north of Durr Wood Camp and west of Toowa Range to King Fisher Ridge to 22S05 Road.
- Monitor the spread/growth of the Shotgun Fire using air operation assets.
- Coordinate with Duty Officers from the Sequoia and Inyo NFs, Sequoia and Kings Canyon NPs, and the Tule River Indian Reservation on support to any new initial attack.

6. Management Objectives

- Establish and implement common objectives and strategies under unified command with Cal Fire Team 6.

Safety Message Managing Change

Change occurs at every moment of every day. Transitions between work shifts, personnel, line assignments, fuels, weather, topography, and other variables are prime opportunities for accidents to occur. Recognizing change and managing it appropriately is every fire fighter's responsibility.

Three Techniques for Managing Change:

- <u>Anticipate</u> Look for it. Always maintain your situational awareness throughout your shift and anticipate change.
- <u>Ask Questions</u> Understand it. Get more information and ask questions. Remember to include all personnel, including subordinates, when information gathering.
- <u>Take Action</u> Address it. Take the time to mitigate all hazards and make them known. Stay flexible to adjust your tactics as necessary.

Communication is the best tool to begin understanding and addressing change appropriately. Include all personnel and means necessary to fully identify and communicate change.

The big change coming is a transition to a new IMT. We have all been working with our counterparts in each section to make it as seamless as possible. When in doubt, ask questions of your supervisors.

Change is Here – Be Mindful and Act Appropriately

FIRE WEATHER FORECAST

INCIDENT NAME: East Castle Zone SQF Complex FORECAST NO: 30

PREDICTION FOR: Sept 22-23, 2020 0600-0600

UNIT: CA-SQF SIGNED: Phil Manuel

TIME AND DATE

FORECAST ISSUED: Mon, Sep 21 @ 2000 hours Incident Meteorologist – Phil Manuel

WEATHER DISCUSSION: A weak trough (upper level disturbance) will move across the area today. It will go unnoticed by most, since little or no cloud formation will be present. However, it will result in austy ridgetop winds, translating into sudden changes in wind direction along the slopes and into the valleys. Temperatures may trend a degree or two cooler today and Wednesday, but the daily humidity trends will be similar with minimums dipping into the teens, and only modest recovery at night. Concerns remain focused on the persistent dry conditions and lack of rainfall. Today is day 109 since we have had over a tenth of an inch of rain. The storms that produced the fires in August were dry thunderstorms containing little or no rain, thus the need to look all the way back to early June to find anything meaningful.

SKY/WEATHER TODAY (TUESDAY): Mostly sunny. Breezier along the ridgetops. Expect the surface inversion to lift between 1100-1200 outside of heavy smoke.

MAX TEMPERATURES / MIN RELATIVE HUMIDITY:

5000 FT: 76 to 82 degrees (Down 2) / 16 to 20 (Up 3) 7000 FT: 68 to 75 degrees (Down 3) / 16 to 22 (Up 3)

20-FT WINDS:

Morning drainage winds will become upslope/upcanyon 1000-1100 with speeds 6 to 10. Slope/Valley:

gusts to 17 mph. Stronger winds in west to east aligned drainages and canyons.

North 3 to 5 mph until 1000. After 1000, west 8 to 12 G20 mph. Ridges:

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 32 Day	TYPE OF FIRE: Wildland					
FIRE NAME: East Castle Zone SQF Complex	OPERATIONAL PERIOD: 9/22/2020 0600-2000					
DATE ISSUED: September 21, 2020	TIME ISSUED: 2000					
UNIT: CA-Sequoia National Forest	SIGNED: /s/ David Greathouse					

WEATHER

Mostly Sunny, Breezy on the Ridgetops today

(See Weather forecast for details)

Weather thresholds for large fire growth: Temps greater than 83°, RH's less than 20%, 20ft winds greater than 7mph

Rule of Thumb - To figure 20' winds, divide the observed eye level winds by .3

FUELS

<u>Fuels-</u> There are three primary fuels in the fire area. In the higher elevations above 5000' mixed conifer fuel types with a heavy load of dead and down dominate the fire area. At the mid elevations the fuels transition into more of a brush type. This will include most burn scars in the area. At the lower elevations, grass is the dominate fuel. There is a heavy component of beetle killed timber in the grey stage throughout the fire area. These pockets could lead to increased dead fuel loads in these areas. The fuels are critically dry for this time of year. The ERC-G is currently setting historical maximums and the 100-hr and 1000-hr fuel moistures are at historical lows. These indices indicate all dead fuels are available to contribute to fire intensity.

<u>Topography-</u> Topography in the fire area is dominated by two features. The Kern river valley runs north/south and bisects the fire can produce diurnal up/down slope winds that can be strong enough to overpower the prevailing winds. The Tule River Canyon on the west side of the fire runs from the San Joaquín valley to east to about Ponderosa. This canyon can affect the winds and associated fire spread, especially at night.

FIRE BEHAVIOR

<u>All Divisions:</u> Another day of warm temperatures and dry relative humidity means active fire behavior. Surface fire with occasional torching will be observed. Any rollouts have the potential for short duration crown runs. Downwind spotting is likely the probability of ignition is 80%-100%. Except under heavy smoke, expect fire activity to increase when the inversion lifts, around 1100, peak out around 1600-1700 before moderating after dark

Expect head fire surface rates of spread in the timber fuel to be around 8-12 ch/hr and 5'-6' flame lengths on 30% slope. Remember, these rates of spread are for surface fire only. Crown fire and spotting will increase the overall rate of spread. A good rule of thumb to use in determining ROS and FL on the flanks is to cut the head fire ROS and FL in half. Backing fire will be about 3-4 ch/hr with 2'4' flame lengths

Div Y – Expect the fire to continue to flank west above the Coy Flat road today. As the fire moves, it could position itself for upslope runs towards Nelson Peak. Otherwise, the fire will continue back down southward between Slate Mountian and highway 190.

Div Z – Expect another active day of flanking and backing fire all along the division today. With the forecasted winds, smoke from the fire, as well as smoke from Div Y could impact Ponderosa. If this happens, be heads up for spot fires, especially in the hand piles. **Pay Attention! Spotting is possible across the Kern River today.** If the fire does spot over the Kern, aggressive attack from air resources should keep fire growth to a minimum in the brush fuels.

AIR OPERATIONS

Smoke nor fire behavior should not affect air operations after the inversion has lifted, between 1100-1200

SAFETY

Work Assignments													

Branch

Division/Group

Work Assignments

Task: Maintain readiness and structure protection in: Bonita Meadow, West Meadow, Beach Meadow and Blackrock Work Center. Recon and develop a structure protection plan for Monache. Continue to go direct with crews and equipment on eastern finger of fire north of Beach Meadows. Monitor DIV N from the air and utilize air resources as needed to keep green islands from impacting control lines. Assist with point protection as needed.

Purpose: Limit impact to values at risk.

End State: Values at risk are not impacted by fire. A plan to protect values at risk is developed for the Monache area. The spread of fire to the south and east is limited in divisions L/N.

Special Instructions

- A/G Tac for Branch Five: RX169.200, TX 169.200. This needs to be hand programmed.
- Personnel to notify DIVS of potentially sensitive cultural materials.

DIVISION ASSIGNMENT LIST

- Castle Ambulance 3 staged at Whitsett Base Camp. Castle Ambulance 2 staged at the Blackrock Ranger Station. REMS available to all divisions.
- Prioritization of all control or containment actions taken during the operational period in this Division will be at the discretion of the
 DIVS. Actions may have to be taken by the DIVS that are not enumerated in today's IAP. These actions would be a result of a
 significant change in actual or expected fire behavior over and above that anticipated at the time the IAP was prepared. These actions
 will be coordinated with and approved by the OSC whenever possible.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
