OPERATIONAL PERIOD (DATE/TIME) SEQUOIA COMPLEX - EAST ZONE INCIDENT OBJECTIVES Strategic Framework Implement a full suppression strategy on the Castle and Shotgun Fires. Values at risk include human safety, private property and residences, infrastructure, utilities, developed sites, facilities, Giant Sequoia groves and archaeological and cultural sites. Apply tactics that offer the highest probability of success. **Leaders Intent** Provide the highest level of customer service to all involved with, or impacted by, the Castle and Shotgun Fires. Ensure transparent, timely and accurate communication at all levels of the incident. All incident assigned personnel should be prepared to take the appropriate actions regarding: Professional behavior, conduct and timely/effective communications. Personal safety and the safety of others, includes driving slowly, safely and defensively. Fatique management by taking breaks and maintaining work/rest cycles. Minimize risk and limit exposure to COVID-19 by daily screening, minimizing large group settings, social distancing, wearing face coverings, hand washing and practicing module of one concept. Effective management of incident costs by planning strategies and tactics toward a high probability of success in meeting incident objectives. **Management Objectives** Provide for firefighter and public safety through hazard recognition and application of the risk management Reduce the threat to private property, residences and infrastructure through the application of effective suppression tactics. Reduce the impacts to the Golden Trout Wilderness values by ensuring minimum impact suppression tactics (MIST) are applied. Utilize historic fire control lines, trails, streams, ridges and natural barriers when possible for control lines. Coordinate suppression activities with assigned incident resource advisors to minimize adverse effects to natural and cultural resources, on riparian areas, watersheds, Spotted Owl and Goshawk PACs, Fisher, Little Kern Golden Trout, Mountain Yellow Legged Frog, and Sierra Nevada Bighorn Sheep Habitats. Mop up as safety allows to reduce the threat of fire spread outside of containment lines. Conduct suppression repair activities to prevent long term damage to resources. Utilize suppression resources in the removal of fuel hazards to help prepare for community repopulation. **Control Objectives** To prevent the fires from spreading to private property, surrounding communities, and values at risk, keep the fire: North of Durrwood Camp to protect communities and infrastructure along the Kern River. West of Toowa Range to Kingfisher Ridge to 22S05 Road to protect recreational and administrative infrastructure. South of East Castle Fire containment lines to limit fire growth to the north. East of Tule River Reservation. Within perimeter of Shotgun fire to limit fire growth.

FIRE BEHAVIOR

GENERAL: With warm and dry conditions, expect continued active smoldering and visible flames on heavier fuels. No forward fire progression is expected and any spot fires should be easily handled by direct attack. Most of our fire continues to be in a backing alignment. All fuels are available to burn and will be receptive to spotting. Spots from roll out will continue to be problematic. Expect single and group tree torching in the denser stands of timber and brush fields in the interior. Spotting distances will be short range up to 100 to 200 feet. Rates of spread on slopes will be 4-8 chains per hour with 2-4 foot flame lengths in the timber. Backing fire multiple forward rate of spread by .3.

Division Y/W: No forward fire progression expected above Coy Creek. From DP7 west towards the Little Kern drainage (Slate Mt.) expect mainly smoldering and creeping. Interior pockets of heat and snags have the potential to throw spots over established lines. Still a good amount of jackpots of heavy fuels burning along the Division. Potential for the Division to be smoked out during the shift due to the wind change.

Division Z: No forward fire progression is expected. Burning snags will be a source for spotting. If fire becomes established across your lines it should have a slow rate of spread.

Division L: No forward fire progression is expected. Keep a heads up for sources of spotting near the lines. Small interior islands will continue to burn out but none are expected to impact current lines.

Night: Expect the fire to remain active in thermal belts or until the RH recovers above 25-30%. No forward fire progression expected on any division.

AIR OPERATIONS

Inversion layer with smoke will be present until at least the 1000-1200hr time period Do not base your plan on air they might not be able to get there.

SAFETY

Fire will become active at RH% below 25% and clear skies. Slope and heavy fuels will enhance fire intensity.

Remember tragedies often occur on quite sections of line.

East Zone Castle Fire Safety Message September 29,2020

KEEP YOUR GUARD UP Against Heat Illness

Factors that contribute to Heat Illness:

- Temperatures greater than 90 degrees(F)
- Dehydration
- Fatigue

. Heat/dehydration issues are avoidable

- KNOW Common Signs/Symptoms and Watch for signs; a little wobbly and no one else is, not responding as fast as normal, just doesn't look right. IRPG pg. 109
- Refer to Heat Index Risk and Mitigation Chart Pocket Guide for guidance on work/break ratio and follow it!! This is proven science!!
- o Be aware of the people around you; know your crew.
- Push fluids along with food, take care of your people, monitor fluid intake, and take breaks to avoid becoming over heated.
- Research has shown fatigue is a consistent factor in serious accidents and fatalities.
 - Identifying fatigue sinks: Carbon monoxide, dehydration, and heat stress. Poor fitness can reduce resistance to fatigue, and 24 hours of being awake affects your decision-making capability like .10 blood alcohol content (IRPG white page xi).
 - Operational overhead: assess your personnel for fatigue and rotate team members as appropriate for rest and rehab. Ensuring adequate rest for firefighting personnel provides for safe, efficient and effective firefighting operations.

Take Care of Each Other

Human Resource Message

Your Human Resource Specialist is here on the incident!

My role as a Human Resource Specialist (HRSP) is to be a focal point for informal resolution of issues and concerns involving discrimination or harassment. I also serve as an open channel through which individuals assigned to this fire can raise questions, discuss concerns, and get answers about any aspect of their work environment — be it practices, policies, operating procedures, facilities, or work conditions.

If you need to talk about a concern, please contact me at

626-391-2347 or juan.silva@usda.gov

Communications

The Communications
Shop has a new phone
number! Keep in
touch!

415-518-2991

If you are from a state that requires a COVID test prior to re-entry please call the COVID information line (949-769-0466), or email Nathan.sill@usda.gov at least 48 hours prior to demob.

The **Demob Process** includes turning in all of your checked-out equipment (including anything from Supply and Communications), getting inspected at Ground Support (if needed according to your resource type and agency affiliation), completing a finance package, and completing the travel information on the Demob Form QR code. If you skip a step, you will not be released from the incident! For more instructions, see the pages related to Finance and Demob in this IAP.
