5. General Control Objectives for the Incident			
<ul style="list-style-type: none"> Provide point protection of values at risk within communities and associated infrastructure to prevent loss of structures, utilities, and developed sites and facilities including: <ul style="list-style-type: none"> The communities of Camp Nelson, Pyles Boys Camp, Rogers Camp, Cedar Slope, Sequoia Crest, Alpine Village, Redwood Drive, Lloyd Meadows, Mountain Aire, Ponderosa, Pierpoint, Doyle Springs, Camp Wishon, Mahogany and Coy Flats; Tule River Municipal Watershed significant natural feature; Infrastructure at Blackrock, Kern, and Quinn Ranger Stations; Osa, Beach, and Casa Vieja Meadows; private inholdings; roads, bridges, utilities, trailheads, and developed and dispersed recreation sites; Monache Mountain, Monache Meadow and other archaeological and cultural sites; and Freeman Giant Sequoia Grove and other sequoia groves. Continue to hold and establish control lines that are safe for firefighters and provide a high probability of success to keep the fire north of Durr Wood Camp and west of Toowa Range to King Fisher Ridge to 22S05 Road. Monitor the spread/growth of the Shotgun Fire using air operation assets. Coordinate with Duty Officers from the Sequoia and Inyo NFs, Sequoia and Kings Canyon NPs, and the Tule River Indian Reservation on support to any new initial attack. 			
6. Management Objectives			
<ul style="list-style-type: none"> Establish and implement common objectives and strategies under unified command with Cal Fire Team 6. Implement suppression actions that have a high potential for success, carefully weighing risk exposure to firefighters. Provide for the safety of firefighters, aviation and public through clear communication. Ensure an understanding of strategies and tactics, including a clearly defined and obtainable end state, in order to facilitate sound risk mitigation decision making. Implement social distancing and adhere to the "module of one" concept to reduce physical exposure and transmission of COVID-19, to provide for the health and safety of all incident personnel. Minimize to the extent feasible smoke exposure to firefighters, communities and other affected areas to reduce susceptibility to the consequences from COVID-19 exposure. Maintain and strengthen relationships with partner agencies, stakeholders, cooperators, community leaders, and local agencies utilizing most effective platforms available. Minimize adverse effects from suppression actions on riparian areas, wetlands, Little Kern Golden Trout, Mountain Yellow Legged Frog, California Spotted Owl, Pacific Fisher, and Sierra Nevada Bighorn Sheep habitats. Minimize impacts to Wilderness areas; use minimum impact suppression tactics (MIST) by utilizing trails, streams, ridges and natural barriers when possible for control lines. 			
7. Commander's Intent			
<ul style="list-style-type: none"> Safety: Address fire fighter, public, and aviation safety through hazard/exposure mitigation. Communication: We will keep the Agency Administrators informed of significant accomplishments and issues. Risk Management: We will use a robust risk assessment process to mitigate unnecessary risk to fire fighters and update and/or revise decisions as necessary. Human Resources: We will ensure that all incident personnel be treated with dignity and respect. We have a zero tolerance for harassment, alcohol, or illegal drug use. Operations: We will make informed tactical decisions engaging the fire in the right locations with the appropriate resources. Public Information: We will provide timely and accurate information through the press, meetings, trap lines, briefings, and social media. Stakeholders: We will coordinate with the delegating agencies to identify key partners and keep them effectively informed of progress and to use their local knowledge. Finance: We will establish and monitor cost effective methods for accomplishing incident objectives.

COVID Safety message

Your incident command is asking that you regularly practice some simple but important mitigations to keep us ALL safe. When we all practice these mitigations by regular habit or routine, you protect not only yourself but the others you interact with on the fire, in camp as well as at home.

To establish a protective, COVID-free bubble, we must all regularly practice these mitigations including **maintaining your module, masking, hand hygiene & sanitation, and physical distancing**. Physical distancing includes having minimal essential personnel gather at morning briefings – spread out and wear your mask at briefings and breakouts.

Each person should also go through the daily symptom self-check and report to medical and your supervisor if you show signs of COVID. (see list of symptoms below)

Failing to practice your mitigations is a **risk to safety**, just like not wearing PPE or failing to carry your fire shelter, except that refusing to protect yourself from COVID endangers both your personal health and also the health of all those around you.

Keep our team healthy, safe and ready to fight fire!

This week the CDC published new guidelines stating that ALL contacts of a known COVID patient should be tested, even if you have NO symptoms. Not keeping yourself and others safe from even potential COVID exposure risks public health officials having to pull excessive numbers of persons off the line for testing.

Regardless of your personal beliefs about this pandemic, we ask you to respect your fellow team members and the importance of this firefighting mission.

Please act responsibly to defend us all.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 31 Day

TYPE OF FIRE: Wildland

FIRE NAME: East Castle Zone SQF Complex

OPERATIONAL PERIOD: 9/21/2020 0600-2000

DATE ISSUED: September 20, 2020

TIME ISSUED: 2000

UNIT: CA-Sequoia National Forest

SIGNED: /s/ David Greathouse

WEATHER

****Mostly Sunny, Slightly Warmer, Slightly Lower Humidity Today****

(See Weather forecast for details)

Weather thresholds for large fire growth: Temps greater than 83°, RH's less than 20%, 20ft winds greater than 7mph

Rule of Thumb – To figure 20' winds, divide the observed eye level winds by .4

FUELS

Fuels- There are three primary fuels in the fire area. In the higher elevations above 5000' mixed conifer fuel types with a heavy load of dead and down dominate the fire area. At the mid elevations the fuels transition into more of a brush type. This will include most burn scars in the area. At the lower elevations, grass is the dominate fuel. There is a heavy component of beetle killed timber in the grey stage throughout the fire area. These pockets could lead to increased dead fuel loads in these areas. The fuels are critically dry for this time of year. The ERC-G is currently setting historical maximums and the 100-hr and 1000-hr fuel moistures are at historical lows. These indices indicate all dead fuels are available to contribute to fire intensity.

Topography- Topography in the fire area is dominated by two features. The Kern river valley runs north/south and bisects the fire can produce diurnal up/down slope winds that can be strong enough to overpower the prevailing winds. The Tule River Canyon on the west side of the fire runs from the San Joaquín valley to east to about Ponderosa. This canyon can affect the winds and associated fire spread, especially at night.

FIRE BEHAVIOR

All Divisions: Another day of warm temperatures and dry relative humidity means active fire behavior. Surface fire with occasional torching will be observed. Any rollouts have the potential for short duration crown runs. Downwind spotting is likely the probability of ignition is 80%-100%. Except under heavy smoke, expect fire activity to increase when the inversion lifts, around 1100, peak out around 1600-1700 before moderating after dark. **Watch the smoke, clear skies can bring a dramatic shift in fire behavior and vice versa.**

Expect head fire surface rates of spread in the timber fuel to be around 8-12 ch/hr and 5'-8' flame lengths on 30% slope. Remember, these rates of spread are for surface fire only. Crown fire and spotting will increase the overall rate of spread. A good rule of thumb to use in determining ROS and FL on the flanks is to cut the head fire ROS and FL in half. Backing fire will be about 3-4 ch/hr with 2'4' flame lengths

Div B – Continue to watch for rollouts along the division. If this occurs, short uphill runs can be expected. These runs could throw spots across Coy creek creating a potential uphill run towards Camp rogers and Mountain Aire

Div Y – The fire will continue to back down from Slate mountain today. If any rollout occurs uphill runs are likely. However, the forecasted winds are in your favor, so spotting should not be a problem.

Div Z – Expect another active day of flanking and backing fire all along the division today. As the lower end of the fire moves If burnouts occur during the day tomorrow, pay attention to the wind, it may become unfavorable in the early afternoon. **Pay Attention! Spotting is likely across the Kern River is likely.**

Ponderosa Structure – The forecasted winds may push smoke from any planned burnout along 190 and the active fire in Div Z into Ponderosa today. If this happens, be heads up for spot fires, especially in the hand piles. These piles are critically dry and will ignite easy.

AIR OPERATIONS

Heavy smoke is likely to linger in drainages due to light winds, potentially causing issues with aviation.

SAFETY

Fires rarely just go from small fires to major "blow ups." There are indicators that, if monitored, will show when a fire is starting to transition from problem fire behavior to extreme fire behavior. Review these indicators on page 3 & 4 in the IRPG.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

ASSIGNMENT-SPECIFIC MEDICAL EMERGENCY ACTION PLAN

Pre-Planning for today's assignment – See Page 2 IRPG

What are the likely hazards that could cause injuries? What kind of severe injuries?		
Who is the likely in-charge DIVS or overhead for an emergency in your assigned area today? (i.e. "Division Zulu")		
Who are the Medical personnel assigned to your part of the incident? What are their capabilities?		
Other Emergency Responders: fire dept, crash rescue, ambulance?		
Communications: Command channel, Air to Ground, Medical helicopters, local rescue/medical?		
Transportation methods available	Ground vehicle, drop point, coordinates, travel route?	
	Aircraft I.D, helispot names, coordinates? Hoist capable, internal transport	
	Other available methods - contingency	
Most likely workforce for evacuation		

Response checklist

Who takes charge?

- DIVS or designated Overhead manages the overall scene and evacuation process.
- Medical personnel and emergency responders manage patients and conduct rescues.
- OPS and IC make command decisions so the emergency can be given full attention and management. They continue to manage ongoing incident operations.

Response sequence:

- First, secure the scene and protect responders and patients from further injury.
- Clear the Command channel for "Emergency Traffic only" if this is a critical emergency. If not, inform Communications of non-critical-emergency status and use normal communications.
- Contact closest Medical personnel and DIVS or designated Overhead for response.
- Notify Communications to initiate Accident Action Plan response.

Information for Communications: (See Medical Incident Report, page 108, IRPG)

- Type and extent of injuries?
- Airway or breathing problems? Serious bleeding?
- Is an EMT present or needed? Are Paramedics (Advanced Life Support) needed?
- Specific location of patients (Lat/Long, access route, DP#, helicopter Landing Zone)?
- What type of transport is needed? Helicopter medevac, hoist, ambulance or ground transport?
- Name of contact person in charge of the scene.
- Do not use names of patients at any time.
- **Medical Emergency Responders confer with Medical Unit Leader and DIVS or designated Overhead to determine if this is a critical emergency and what type of transport is needed.**
