Comments /notes on tonight's mission and this interpretation: TK-7 operator noted "no fire to be seen" on sensor display. No previous day heat perimeter was provided, and imagery had insufficient heat to produce a definitive heat perimeter. OPS_ansiE_port_20210828_2200_South_BDU12298_0829Day – PDF found on the ftp server was imported into ArcGis to aid in interpretation of this heat perimeter. Some isolated heat sources were detected within perimeter. No intense heat identified.
