		Time From: 0600	Time To: 0600

3. Objective(s):

Management Objectives

- Provide for the safety of firefighters and the public through utilization of strategic and deliberate risk assessment processes. Ensure incident within an incident protocols are established.
- Develop and implement operational objectives based on identified values at risk and highest probability of success limiting fire spread.
- Follow established guidelines and mitigations regarding COVID and other infectious diseases.
- Enhance relationships through timely communication and active involvement with the public, stakeholders, and cooperators.
- Coordinate with the READ's to ensure natural, cultural, and historical values are protected.
- Maintain fiscal responsibility keeping cost commensurate with the values at risk.
- Provide initial attack response to new fire starts within the TFR boundary. Assist with initial attack efforts outside the boundary as requested.

Control Objectives

- Keep the fire North of Keysville while providing for structure defense where appropriate.
- Provide structure defense to the communities of Alta Sierra, Wofford Heights, and other mountain communities while keeping the fire south of the Tulare County line.
- Keep the fire East of Granite Road while providing for structure defense where appropriate.
- Provide structure defense to the communities of Kernville, River Kern and other mountain communities while keeping the fire west of Highway 155, Burlando Rd. and Sierra Way Mountain Highway 99.

General Situational Awareness:

Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees with historic mining in the area.

All persons must wear a mask indoors at all times regardless of vaccinated status, as well as outdoors when physical distancing cannot be maintained.

Maintain a module as one, wash your hands, and sanitize surfaces.

OPERATIONAL PERIOD: August 27 2021
FORECAST ISSUED: 8/26/2021 at 1900

INCIDENT: French
UNIT: Central California District Office

Incident Meteorologist: Robert Rickey

Weather Discussion: For today, strengthening high pressure will bring noticeably warmer temperatures along with very low humidity. High temperatures will climb to near 100 degrees at the lower elevations. These hot temperatures will combine with humidity near 10% and unstable conditions to produce a Haines of 5. Southwest ridgetop winds in the morning will become more westerly in the afternoon with gusts as high as 25 mph possible. Winds will decrease after 2000, but very poor humidity recoveries are forecast for tonight. Hotter weather and a continuation of very low humidity will persist over the weekend.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 8	TYPE OF FIRE: Vegetation
FIRE NAME: French	OPERATIONAL PERIOD: Aug 27th 24 Hour
DATE ISSUED: August 26 th	TIME ISSUED: 2000
UNIT: CND/SQF French	SIGNED: Dan O'Connor Fire Behavior Analyst (FBAN)

WEATHER SUMMARY: See detailed Fire Weather Forecast in IAP

FUELS:

Fire areas include a range of conifer systems in the upper elevations above 5000', transitioning into scrub oak, sage, and annual grasses on the eastern slope down to Lake Isabella. Areas to the West of the fire transition from timber up top to a mix of Oak and annual grass understory. Anticipate heavy fuel loading, drought stress, bug kill, and a lack of fire history to the west of the fire, with a mix of Ponderosa Pine, White Fir, and Incense Cedar.

The area is currently classified as 'Exceptional' drought by the US Drought Monitor, with Energy Release Components exceeding the 90th percentile, not far off all time high levels. Heavy dead and down fuels will likely burn completely, holding heat and actively consuming through all hours of the day. Fine dead fuel moisture is calculated at 3% or less.

EXPECTED FIRE BEHAVIOR: *Based on the Warmest, Driest, Windiest Conditions Forecasted*

<u>Maximum Spotting Distance</u>	Fuel Type/Model	Maximum SURFACE Rate of Spread (chains/hour)	Maximum Flame Length (feet)
0.9 miles Div E/H 0.25 miles elsewhere	Timber litter and understory TU5/TL6	Head 20-25 ch/hr Flank 12-15 ch/hr	Head 12-16 ft Flank 8-12 ft
<u>Probability of Ignition</u> 88 %	Grass/Shrub GR2/GS2	Head 25-30 ch/hr Flank 15-20 ch/hr	Head 5-8 ft Flank 4-6 ft

****Another round of testing lines for all areas of the Fire with higher temperatures, single digit RH, and stronger winds from the West.**

Div. E/H/K/Alta Sierra Structure Group Gusty, very dry winds and good atmospheric lift will aid more backing and rollout which will elevate into slope reversals and wind aligned runs with long range spotting within the WUI and north into the Cedar and Way Fire scars. There is potential for these spots within the scar to continue their march NE to the north end and outside of this 2016 burn area.

Div. M/N Any spotting across lines may find open space islands within the Wofford Heights community and produce rapid spread rates. Within the Shirley Fire scar anticipate more dry gusty winds trying their best to scour out heat sources and spot across control lines along the 02/Old State Roads.

O/R Lots of good work on the ground has halted fire spread; be heads up for interior spotting lofting embers across lines as well as fire weakened trees in work areas.

Div. Y This area had very large spread potential and threat to values at risk to the east; for several days gusty afternoon winds kept pushing the fire aggressively. Continue to hold all that good work in place, watching for flare ups or spots over containment lines. There is potential for spotting near the Y/Z break or within Zulu proper to create problematic fire spread that flanks current containment lines to the south and east.

Div. Z Active backing supported by the clean, dry, gusty winds from the West. Watch for fires to find sideways alignment that could spot moderate distances over containment lines and push towards Division Yankee.

Night Divisions: Expect another hot handoff from Day Shift and limited moderation of fire activity given the poor overnight RH. Winds may back off a bit but they'll still be enough to push the fire downslope.

AIR OPERATIONS:

Anticipate smoke to clear enough to support air missions by 1300

SAFETY:

Drought stress will keep spotting potential and interior flareups in green islands high for the next several days. Be aware that areas of the fire that have been quiet for days could slip a spot fire out and generate rapid spread rates to the East.

Hazards & Risks

Aviation Operations & Safety: Aviation operations present a unique set of hazards to not only pilots, but firefighters on the ground as well. Review the *Aviation Watch Out Situations* found in the IRPG. Each aircraft has specific performance capabilities and limitations. Determine the correct 'type' of aircraft for the mission you have. Consider fixed-tank versus long line, etc. Take time to review the IRPG guidance on *Directing Retardant and Bucket Drops*. Maintain positive communications with pilots and ground forces. Ensure personnel are advised and cleared of the drop area and advise pilots of hazards such as power lines or other aircraft in the area (to include drones flying over the fire area).

Human Factor Barriers to SA: To date, it has been a demanding fire season with tough assignments, long road trips and extended times away from home, with little time to fully rest and recuperate. This can lead to distractions to our situational awareness and impede our decision-making and stress our relationships with coworkers. Some factors to consider:

- Inexperience level with local factors
- Distractions from primary task
- Fatigue
- Stress reactions
- Hazardous attitudes
- Review your IRPG for more information on these factors.

Power line & Gas line Safety: When working around powerlines, avoid parking or working under or near them. Communicate powerline hazards to all resources. Seek out power company advisers for information on specific hazards. ***Treat all powerlines and downed wires as energized!***

The same with high-pressure gas lines and propane tanks. Watch for buried or hidden lines, especially around structures. Sections of the gas line may be exposed above ground or buried in shallow ground. Consult with gas company representatives for guidance.
