## FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 11	TYPE OF FIRE: Vegetation
FIRE NAME: French	OPERATIONAL PERIOD: Aug 30th 24 Hour
DATE ISSUED: August 29 <sup>th</sup>	TIME ISSUED: 2000
UNIT: CND/SQF French	SIGNED: Dan O'Connor Fire Behavior Analyst (FBAN)

**WEATHER SUMMARY:** See detailed Fire Weather Forecast in IAP

### FUELS:

Fire areas include a range of conifer systems in the upper elevations above 5000', transitioning into scrub oak, sage, and annual grasses on the eastern slope down to Lake Isabella. Areas to the West of the fire transition from timber up top to a mix of Oak and annual grass understory. Anticipate heavy fuel loading, drought stress, bug kill, and a lack of fire history to the west of the fire, with a mix of Ponderosa Pine, White Fir, and Incense Cedar.

The area is currently classified as 'Exceptional' drought by the US Drought Monitor, with Energy Release Components exceeding the 90<sup>th</sup> percentile, not far off all time high levels. Heavy dead and down fuels will likely burn completely, holding heat and actively consuming through all hours of the day. Fine dead fuel moisture is calculated at 3% or less.

### EXPECTED FIRE BEHAVIOR: *Based on the Warmest, Driest, Windiest Conditions Forecasted*

Maximum Spotting Distance	Fuel Type/Model	Maximum SURFACE Rate of Spread (chains/hour)	Maximum Flame Length (feet)
Grass/Shrub 0.25 miles Timber 0.5 miles	Timber litter and understory TU5/TL6	Head 20-25 ch/hr Flank 12-15 ch/hr	Head 12-16 ft Flank 8-12 ft
<b>Probability of Ignition</b> 86 %	Grass/Shrub GR2/GS2	Head 25-30 ch/hr Flank 15-20 ch/hr	Head 5-8 ft Flank 4-6 ft

**\*\*\*WNW afternoon winds will be challenging to Divisions Yankee and Zulu.**

**Div. A/E** As the fire backs down from timber into a heavy brush fuel model, in places its only burning the understory and has potential to reburn as a slope driven run in the canopies. Terrain heavily influences direction of travel for these upslope runs.

**H/K** Gusty winds and low RH will put these areas to the test yet again, but great job in this very rough terrain with extensive snag challenges.

**Alta Sierra/Wofford Structure Groups** Drought stressed vegetation and soils will create long term smoldering and creeping with the occasional torching/spotting event within the communities.

**Div. M/N** Limited spread potential remains with all the good work securing these divisions, but gusty afternoon winds could support rapid spread rates outside containment lines.

**O/R** Lots of good work on the ground has halted fire spread; be heads up for interior spotting lofting embers across lines as well as fire weakened trees in work areas.

**Div. Y** Critical holding piece as fire will attempt to get out into more exposed areas and push further south and east with NW flow.

**Div. Z** Active backing supported by the clean, dry, gusty winds from the West. Watch for fires to find sideways alignment that could spot moderate distances over containment lines and push towards and below Divisions Alpha and Yankee.

**Night Divisions:** Focus area will likely again be the SW portion of the fire with daytime spread rates and spotting distances until the winds let up or RH recovers.

### AIR OPERATIONS:

Anticipate smoke to clear enough to support air missions by 1000 or earlier

### SAFETY:

We've had consistency in backing fire spread on the West side of the fire while higher priority areas got more attention. These areas are becoming more complex with complex terrain features, dense brush and gusty afternoon winds.

- A major concern on this staying out of the smoke, up, up and away. Use common sense and expect the unexpected. Driving hazards are easily mitigated if you think before turning the key.
- Burning snags, felling snags, hazardous tree identification,... Flag those danger points.
- PPE? Is there a threat of a re-burn or entrapment? AGAIN, all of us need to use common sense, adjust the plan, follow the plan
- Keep on the alert for the changes in the weather as we study our weather forecasts.
- “Incident-within-Incident (IWI)”: First on-scene EMT or PARAMEDIC declare a medical incident response. Notify immediate supervisor, establish ICS, and follow the 8-line found in the IRPG pink pages 118-119, or found in every Incident Action Plan (IAP).
