**WEATHER DISCUSSION**

**...Cold Front With Light Rain and Snow Showers along with Local Gusty Winds Monday through Monday Night...**  
An area of low pressure and a cold front will sweep into California and the Great Basin on Monday. The front will bring a chance of rain and snow showers on Monday but little accumulation of rain or snow is expected. At Orange Cove and to a lesser degree the Woodlake camps, winds will become stronger from the northwest and gusts may approach or exceed 30 mph in the afternoon. Due the sheltering of the surrounding mountains and terrain, the fire area will not see widespread strong winds outside of a few exposed peaks and canyons in the north zone. Colder air will however move into the region and temperatures will be much colder Monday and Tuesday. A warming trend will begin on Wednesday as high pressure rebuilds over the region.

**.MONDAY...**

**Sky/weather.....**Increasing clouds with a 40 percent chance of light rain and snow showers. Snow level around 7000 lowering to near 5000 feet. Accumulation up to an inch of snow above 7000 feet.  
**Max temperature....**Lower Elevations 45-52. Upper Elevations 35-45.  
**Min humidity.....**Lower Elevations 44-54%. Upper Elevations 54-64%.  
**Wind (20 ft).....**  
**Slope/valley.....**Upslope 2-6 mph through 1200 then northwest 6-12 mph with gusts to 17 mph. Becoming windy in Orange Cove and Woodlake camps with northwest winds 15-25 mph with gusts 30-35 mph possible in the afternoon.  
**Ridgetop.....**Northwest 12-18 mph.  
**Mixing height.....**Increasing to around 3000 ft AGL.  
**Transport winds....**West to northwest around 15 mph.  
**CWR.....**10 percent.

**.MONDAY NIGHT...**

**Sky/weather.....**Clear and cold. Locally gusty winds higher elevations and Kings Canyon drainage north zone.  
**Min temperature....**Lower Elevations 25-35. Upper Elevations 15-25.  
**Max humidity.....**Lower Elevations 42-52%. Upper Elevations 48-52%.  
**Wind (20 ft).....**  
**Slope/valley.....**North to northeast 3-8 mph. Gusty northeast winds possible to 25 mph Hume Lake region.  
**Ridgetop.....**North 9-13 mph. Gusts to 30 mph higher peaks north zone.  
**Mixing height.....**Lowering to near surface.  
**Transport winds....**Northeast around 7 mph.

**.TUESDAY...**

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 4	<b>TYPE OF FIRE:</b> Wildfire
<b>FIRE NAME:</b> North Zone KNP Complex	<b>OPERATIONAL PERIOD:</b> October 11, 2021 24hr
<b>DATE ISSUED:</b> 10/10/21	<b>TIME ISSUED:</b> 2000
<b>UNIT:</b> CA-KNP	<b>SIGNED:</b> _____ Typed/printed: Dennis Burns/s/

### INPUTS

**WEATHER SUMMARY:** \*\*\*Potential Rain/Snow Much Colder \*\*\*  
- Today Temps 35-45 RH 54-64%. Wind, NW 6-12mph gusts 17mph.  
- Tonight Temps 15-25 RH 48-52% Wind N-NE 9-13mph gusts 30mph.

### OUTPUTS

#### FIRE BEHAVIOR

**GENERAL:** With the forecasted weather, little to no forward fire progression is expected on the fire today and tonight. Keep a heads up for the winds, fire weakened trees will come down and the wind will fan the piles, potentially pushing embers over the lines. Main chances for forward progression will be from rollout. Expect mainly smoldering and creeping fire behavior. However, pockets of heavier fuel will continue to burn along with surface fuels under tight canopies. There is a minimal chance of spot fires from torching trees but with the forecasted winds torching is possible.

**ERC:** 26 Below average.

**POI:** 30-40% in the afternoon.

#### SPECIFIC:

**Div P:** Most of the fire is in a backing alignment, expect little to no growth on the Division. Rollout will continue. Fuels are becoming more sparse east of the Generals Highway little if any forward progression expected.

**Div U:** No forward fire progression expected. Rollout will continue to challenge containment lines. If fire does get across containment lines, expect slow rates of spread.

**Div S:** Rollout will continue to be problematic. However, no forward fire progression is expected. Areas under the tight canopy have the potential to exhibit active surface fire.

**Div L:** Expect minimal forward fire progression. Pockets of heavy fuels will continue to burn out.

**All Areas:** Spotting from rollout will continue to be problematic. Slope-reversals are probable from any fire burning in drainage bottoms. Mop-up will continue to be extensive.

**AIR OPERATIONS:** Rain/snow and high winds will limit air operations.

### SAFETY

- Make sure Lookouts are posted in places where they can see potential spotting.
- Fire weakened timber poses a threat to personnel working in timber areas.
- Unburned fuel between you and the fire.

## Travel & Driving Safety

### Travel and driving safety tips:

- 1. Don't drive too fast for conditions, i.e. roads, weather, wildlife, or stock.**
- 2. Know your destination.**
- 3. Do not carry passengers in the back of pick-up trucks. However, if necessary, they should be seated on the floor of the truck bed.**
- 4. Do not haul people and tools together unless tools are inside a closed container/compartment.**
- 5. Always use a backing guide.**
- 6. When road conditions or limitations are unknown, use scouts in smaller vehicles to inspect ahead of larger vehicles.**
- 7. Chock your vehicle anytime the driver is not in it.**
- 8. Use well-rested drivers.**
- 9. Inspect your vehicle daily and repair any problems before continuing use.**
- 10. Keep the inside of your vehicle clean and free of rolling objects.**

 The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "J", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed. **Communications Unit Phone:**

## Human Resources Message

### Incident Behavior Expectations

We may be exceptional at our position from the vast experience we have obtained through the many years of being on incidents, but we must also behave in a manner that is expected of us while performing those duties.

Some of those expectations are: To treat *everyone* with dignity and respect; show patience and understanding with one another; diffuse any conflict between yourself and someone else; hold ourselves accountable for promoting a positive workplace; and immediately stop any inappropriate behavior from occurring, such as bullying and/or harassment.

## Resource Advisor Message

- ❖ Employ Minimum Impact Suppression Tactics (MIST) when conducting operations within park boundaries.
- ❖ Limit snagging unless necessary for firefighter safety and the protection of critical values at risk; always low stump.
- ❖ Limit operations in meadows.
- ❖ Avoid cutting trees over 20" unless required for safety.

### Consult with Fireline Resource Advisors (REAFs) before:

- ❖ Working in an area flagged off with sensitive resource flagging (Blue/black stripe + white; yellow/black stripe + white).
- ❖ Establishing new camps, staging areas, safety zones, helispots, etc.
- ❖ Park-approved dozer line construction should have a REAF on site during construction.

Please ensure all food and scented items are secured at all times in approved bear-resistant containers and please pack out all garbage.

Wash newly arrived vehicles and equipment at Woodlake weed wash before heading to fireline.

Always maintain 300' clearance of dozers around Sequoia groves.

## Giant Sequoia Prep Standards

**Goal:** reduce fire impacts on lower tree, prevent fire from climbing into crown, and remove litter from catfaces.

1. Create a 3-foot scrape around the base of the tree down to mineral soil.
2. Create an approximately 25-foot (drip line of crown) saw line around a tree where brush, most small trees (<10 in. dbh), heavy coarse woody debris (1000 hr fuels), and snags are removed.
3. Remove litter/duff and woody debris from catfaces. Decide whether wrapping the catface would help keep it from igniting. If wrap is available and tree is a tree of special interest, consider wrapping if tree may be impacted by radiant heat from nearby fuels.
4. Thin thickets of trees surrounding large sequoias for about 25 feet.

## Giant Sequoia Post Fire Assessment & Treatment

1. Gain access to groves according to priorities and where safe to do so. No heavy vehicles off roads
2. Use water to cool sequoia roots where there is heat.
  - ❖ Heat most likely to be concentrated in cat faces and uphill sides of trees. Minimize soil disturbance to avoid chopping live roots. Roots may extend up to drip line of tree.
  - ❖ Ask crews to walk 360 around trees and cold trail. If their 'hot lap' has heat, put some water on it.
  - ❖ Extinguish flames on all sides of trees.
