FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 30	TYPE OF FIRE: Wildfire
FIRE NAME: KNP Complex	OPERATIONAL PERIOD: October 15, 2021 24hr
DATE ISSUED: 10/14/21	TIME ISSUED: 2000
UNIT: CA-KNP	SIGNED: _____ Typed/printed: Dennis Burns/s/

INPUTS

WEATHER SUMMARY: *Sunny slightly Warmer*****

- Today: Temps. Upper 55-65 RH. 18-23%. Lower Temps. 65-75 RH. 15-20% Wind, NE 3-6mph.
- Tonight: Temps. Upper 38-48 RH 45-50% Lower Temps. 48-58 RH. 33-38 Wind E 2-5mph.

OUTPUTS

FIRE BEHAVIOR

GENERAL: With the continued dry conditions, expect to see active burning of interior fuels. Little to no forward fire progression is expected on the fire today and tonight. Fire weakened trees will continue to fall. Forward progression will be mainly from rollout. Expect mainly smoldering and creeping fire behavior. Pockets of heavier fuels will continue to actively burn along with surface fuels under tight canopies. There is a minimal chance of spot fires from torching trees. Expect to see more open surface fire and one hour fuels have become more receptive to spot fires.

ERC: 63 Slightly above average.

POI: 70-80% in the afternoon.

SPECIFIC:

Branch I: Most of the fire is in a backing alignment, expect little to no growth on the Branch. Rollout will continue to challenge containment. Fuels are more sparse east of the Generals Highway little if any forward progression expected. If fire were to ignite over containment line, expect slow rates of spread and minimal flame lengths. In Div. L the heat along the rim of the Middle Fork will continue to flank to the east without suppression action.

Branch II: No forward fire progression expected, except for the east end of Division E. Rollout will continue to challenge containment lines. If fire does get across containment lines, expect slow rates of spread. Div E. the fire will continue to slowly back towards Cliff Creek. There is a burn scar between the fire and the creek, if the fire reaches it aircraft will be very effective. Keep a heads up for any hold over heat in Div. C. If fire becomes established along the middle fork, expect short intense uphill runs towards Mineral King Rd.

All Areas: Spotting from rollout will continue to be problematic. Slope-reversals are probable from any fire burning in drainage bottoms. Mop-up will continue to be extensive.

AIR OPERATIONS: Smoke has the potential to limit air operations until around noon.

SAFETY

- Make sure Lookouts are posted in places where they can see potential spotting.
- Fire weakened timber poses a threat to personnel working in timber areas.
- Unburned fuel between you and the fire.

Planning for Medical Emergencies

Prior to each operational period, Incident Commanders, supervisors, and all wildland firefighters need to ask and be able to answer the following three questions:

1. What are we going to do if someone gets hurt?
 - Are there personnel on your crew/division/fire that can provide medical support?
 - What type of equipment is available to treat and transport injured personnel?
2. How will we get them out of here?
 - Could you get an injured firefighter to a road or to a helispot?
 - How many personnel and what kind of equipment would you need to get an injured firefighter out?
3. How long will it take to get them to a hospital?
 - Where is the closest hospital?
 - Will you use air or ground transportation?
 - Could conditions change and affect the transportation timeline?
 - Smoke/clouds/nightfall
 - Fire behavior
 - Mechanical failures

All operational activities should be based on answers to these questions. If the answers are insufficient, stop, reassess, and consider alternate strategies and tactics.

Human Resource Message

5 Seconds

5 seconds, the amount of time it generally takes for one to sneeze (depending on the sneezer), for normally outstanding employees, to "let their guard down" and say or do something that has a negative effect on their time here on the incident.

After being on an incident for a few days, a week, or whatever amount of time it takes, we begin to become more relaxed with those who we work close with. When we become more relaxed with our communication because we feel we're "tight" with someone or our crew and they are "cool," we may feel it's okay to tell a dirty joke or make a comment about how a coworker looks or (insert any other inappropriate comments not safe for work (NSFW)). However, when we say or do something NSFW, we open ourselves up to a complaint being filed, and possibly as a result, being released from the incident and our employer being notified. It's never a good thing when that happens.

Resource Advisor Message

- ❖ Employ Minimum Impact Suppression Tactics (MIST) when conducting operations within park boundaries.
- ❖ Limit snagging unless necessary for firefighter safety and the protection of critical values at risk; always low stump.
- ❖ Limit operations in meadows.
- ❖ Avoid cutting trees over 20" unless required for safety.

Consult with Fireline Resource Advisors (REAFs) before:

- ❖ Working in an area flagged off with sensitive resource flagging (Blue/black stripe + white; yellow/black stripe + white).
- ❖ Establishing new camps, staging areas, safety zones, helispots, etc.
- ❖ Park-approved dozer line construction should have a REAF on site during construction.

Please ensure all food and scented items are secured at all times in approved bear-resistant containers and please pack out all garbage.

Wash newly arrived vehicles and equipment at Woodlake weed wash before heading to fireline.

Always maintain 300' clearance of dozers around Sequoia groves.

Giant Sequoia Prep Standards

Goal: reduce fire impacts on lower tree, prevent fire from climbing into crown, and remove litter from catfaces.

1. Create a 3-foot scrape around the base of the tree down to mineral soil.
2. Create an approximately 25-foot (drip line of crown) saw line around a tree where brush, most small trees (<10 in. dbh), heavy coarse woody debris (1000 hr fuels), and snags are removed.
3. Remove litter/duff and woody debris from catfaces. Decide whether wrapping the catface would help keep it from igniting. If wrap is available and tree is a tree of special interest, consider wrapping if tree may be impacted by radiant heat from nearby fuels.
4. Thin thickets of trees surrounding large sequoias for about 25 feet.

Giant Sequoia Post Fire Assessment & Treatment

1. Gain access to groves according to priorities and where safe to do so. No heavy vehicles off roads
2. Use water to cool sequoia roots where there is heat.
 - ❖ Heat most likely to be concentrated in cat faces and uphill sides of trees. Minimize soil disturbance to avoid chopping live roots. Roots may extend up to drip line of tree.
 - ❖ Ask crews to walk 360 around trees and cold trail. If their 'hot lap' has heat, put some water on it.
 - ❖ Extinguish flames on all sides of trees.
