Rainfall amounts are forecast to be generally 2-3 inches with potential for up to 5 inches, mainly across high elevations. Moderate to heavy rainfall rates could cause flash flooding and debris flows. A **Flash Flood Watch** is in effect from Sunday morning through Monday evening. Winds will increase on Monday with gusts to around 25 mph. Fire weakened trees will be more susceptible to falling from the gusty winds once the soil becomes saturated.

FIRE BEHAVIOR FORECAST					
FORECAST NUMBER: 38	TYPE OF FIRE: Vegetation				
FIRE NAME: KNP Complex	OPERATIONAL PERIOD: Oct 23st 24 Hour				
DATE ISSUED: October 22th	TIME ISSUED: 2000				
UNIT: Sequoia Kings National Park	SIGNED: Greg White PSC2 for Dan O'Connor				
	Fire Behavior Analyst (FBAN)				
WEATHER SUMMAR	RY: See detailed Fire Weather Forecast in IAP				

FUELS:

The most notable vegetation is forests of giant sequoia (Sequoiadendron giganteum). Oak woodland (blue oak, interior live oak) and chaparral with chamise and manzanita characterize the lower elevations. Mixed conifer forest with Colorado white fir, red fir, western yellow pine (ponderosa pine), sugar pine and lodgepole pine forests and montane meadows occupy the middle elevations. Subalpine forests with foxtail pine, whitebark pine and meadows, krummholz, and alpine ecosystems typify the higher elevations. A combination of prescribed and resource benefit fire patches exist throughout the Park. Tulare County is currently classified as 'Exceptional' by the US Drought Monitor mapping system impacting both live and dead fuels.

EXPECTED FIRE BEHAVIOR: Based on the Warmest, Driest, Windiest Conditions Forecasted

Maximum Spotting	Fuel Type/Model	Maximum	Maximum
<u>Distance</u>		Rate of Spread (chains/hour)	Flame Length (feet)
0.1 mile or less Probability of Ignition 24 %	Timber understory (TU5-	Head 3-5 ch/hr	Head 2-5 ft
	Overstocked and/or dense reprod)	Flank 1-2 ch/hr	Flank 0-2 ft
	Timber litter (TL6-closed canopy,	Head 1-2 ch/hr	Head 1-2 ft
	ground fuels)	Flank 0-1 ch/hr	Flank 0-2 ft

General: Minimal fire progression is expected today. Creeping under closed canopies and heavier fuels will continue to burn. Fire weakened trees will continue to fall. Spotting, if any will be from rollout One-hour fuels are becoming more receptive to spotting on exposed south and west slopes.

SPECIFIC

North: No forward fire progression is expected. Most of the fire is in a backing alignment. Rollout will continue to challenge containment. Heavier fuels will continue to burn, and some creeping should be expected under closed canopies and an increase in smoldering of heavy fuels.

South: Expect heavier fuels to continue to burn in Division C. Rollout will continue to challenge containment lines. Some flanking runs are possible on the east flank Div. C. The fire is not expected to cross Cliff Creek. No forward progression in Divisions A and X.

AIR OPERATIONS:

Minimal smoke impacts to restrict air operations today

SAFETY:

As the fire moves into the ramp down stage, keep in mind fuels are very slow to recover and you may find pockets of active fire where slope, aspect, and fuels align.

Hazards & Risks

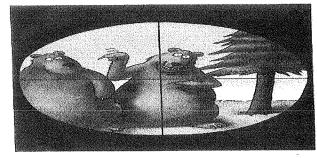

The Distracted Firefighter: Radios, cell phones, texting, conversations, eating, drinking, reading maps, looking at the fire.....the list goes on. It is easy to get distracted from the very task you are supposed to be focused on. Make every attempt to avoid these distractions whether you're driving or engaged in the fire fight; a brief nano-second of distraction can have disastrous results.

Chipper & Chainsaw Operations: Be sure to use only qualified and or certified chipper and chainsaw operators. Use of ALL PPE is mandatory! Consider work proximity to each other; cutters in one area while the chipper crew follows up with the chipper. Establish traffic control when working alongside roadways. Watch your footing when working on steep cut banks and watch for brush roll-out landing on the highway. Use caution when using the directional chipper spray nozzle and keep personnel away from the spray zone.

Wildlife Encounters: Watch for wildlife within the fire area and along roadways. Bears are in the area, especially in the upper elevations. Avoid leaving food and trash in sleeping areas, along the fireline or at drop points. Secure your vehicles with windows up when parked in the field. Animals tend to be most active during the dawn and dusk

hours when visibility is reduced on the road. Drive at "deer

speed".

HUMAN RESOURCES MESSAGE

Setting Boundaries...

You should set boundaries at work in order to protect yourself from burning out and/or finding yourself in uncomfortable situations that may be otherwise avoidable. On the fire line we set boundaries to keep the fire from going where we do not want it to go.

Have you set clear boundaries, in your workspace, to keep you from feeling overrun? Here are three major types of boundaries you can use to improve your work environment:

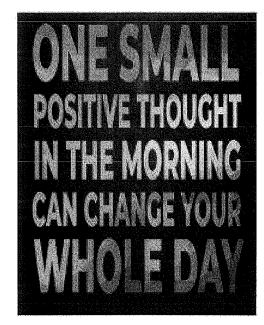

- Physical Boundaries: Your physical boundaries refer to the rules that define your personal space and touch (i.e. hugs vs. handshakes) in the workplace.
- Emotional Boundaries: Your emotional boundaries might cause you to say no to certain asks at work, for example, and you won't allow others' attitudes about it to easily influence your own.
- Mental Boundaries: Your mental boundaries refer to your thoughts, values and opinions on matters in the workplace.

Riddle of the Day!!

What can you hold in your left hand but not in your right?
