## WEATHER DISCUSSION

Weak high pressure will remain over the fire area Sunday before an area of low pressure and a mainly dry cold front sweeps into California and the Great Basin on Monday. Although lacking moisture the front will bring a slight chance of rain and snow showers briefly on Monday but little accumulation of rain or snow is expected. Due the sheltering of the surrounding mountains and terrain, the fire area will see winds aloft and over the highest ridges increase on Monday however the vast majority of the fire area will see a minor increase in winds. Colder air will however move into the region and temperatures will be much colder Monday and Tuesday.

**INPUTS**

**WEATHER SUMMARY:**

TODAY (Sunday) See Fire Weather Forecast.

**WEATHER:** Mostly sunny.

**Maximum Temperature:** 60-68° **Minimum Humidity:** 22-32%.

**WIND:**

- Slope/Valley- Down slope down canyon 2-6 mph through 0800 then becoming upslope 3-7 mph after 1100.
- Ridges- Northwest around 6 mph.

**GENERAL FUEL ASSUMPTIONS:**

- *Large fuels are extremely dry due to continuing drought conditions as evidenced by presence of white ash within the fire perimeter.*

**Local RAWS Observations (1300)**

---	--------	------------------	--------	------------------

**FIRE BEHAVIOR OUTPUTS**

**GENERAL**

- *Continued drying will stimulate fire behavior beyond the creeping and smoldering. Expect to see low to moderate fire behavior. Spotting .2-.3 mile. Rollout will continue to be a problem.*

**Fire Behavior Potential**

Vegetation Type	Fuel Model	ROS (ch\hr)	Flame Length (ft)	Spot Distance (mi)	PIG %
Grass	GR2	40-48	4-5	0.2-0.3	54
Shrub	SH7/SH5	66-74	18-19	0.2-0.3	54
Timber	TU5 & TL9	11-20	6-10	0.2-0.3	54

<b>Specific:</b>	<b>Branch II</b>
<b>DIV A</b>	Interior smoldering.
<b>DIV C</b>	Low to moderate fire behavior as the fire backs toward the East Fork. Upslope movement to the north east can be expected as the fuels dry and the upslope winds influence fire behavior.
<b>DIV E</b>	Eastward movement will be limited. Low fire behavior can be expected as it backs down to the Middle Fork.
<b>DIV X</b>	Some backing to the west. Low to moderate fire behavior in the day and night. The most growth will be during the downslope winds influence the fire.

**AIR OPERATIONS**

Morning weather will limit air operations.

**SAFETY**

Take weather observations frequently. Base all actions on current and expected fire behavior. Reexamine your plan and risk analysis as fire behavior increases. Post more lookouts, if more warning time is needed.

## ***SAFETY MESSAGE***

*Fire fighter safety comes first on every fire, every time*

**Incident Within An Incident Protocol:** Continue using the same IWI protocol as SW Team 2 utilized.

**Green Medical:** Declare and name the medical incident a green through Communications on the Radio. No 8-Line needed over the radio. Utilize medical personnel as needed. Elevate if needed.

**Yellow/Red Medical:** Declare and name the medical incident as a Yellow or Red depending on severity of incident. Use the 8-line as intended communicating your needs to Communications. Utilize medical personnel as needed.

### **Cumulative Fatigue:**

Numerous studies have identified that significant impacts of fatigue on the human body are often not realized until something negative occurs. A few key points to keep in mind:

1. Repeated loss or lack of sleep results in a phenomenon known as "sleep debt."
2. The "quality" of sleep is just as essential as the quantity of sleep.
3. Adequate work/rest cycles should be followed to prevent negative effects of fatigue.

Supervisors must be informed of potentially dangerous conditions. The effects of fatigue can directly impact our abilities to:

1. Perform various tasks
2. Maintain situational awareness and a high degree of alertness
3. React appropriately in a timely manner and fashion
4. Retain a sharp memory and recollection of information
5. Efficiently process information and make sound decisions
6. Maintain a positive and supportive attitude
7. Control levels of frustration, irritation, and aggression.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed. <b>Communications Unit Phone:</b>

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed. <b>Communications Unit Phone:</b>
