Incident Meteorologist

<u>WEATHER DISCUSSION:</u> Mostly clear, but smoky, conditions will persist through the operational periods. The main concern will be winds with gusty westerly winds anticipated across the ridges and upper slopes. Wind gusts of 20-30 MPH will be likely with locally higher gusts possible. For lower elevations, typical diurnal winds are expected, but in drainages that align with the ridges, wind speeds could be a little bit stronger. Temperatures will be cooler with a slight increase in relative humidity.

On Tuesday, a dry cold front will sweep across the area, bringing cooler temperatures and higher relative humidity. However, the front will also bring very gusty southwest to northwest winds to the fire, especially at the higher elevations, with gusts around 35 MPH possible.

WEATHER FORECAST FOR TODAY:

WEATHER:

Mostly clear. Areas of smoke.

MAX TEMPERATURES:

68-78.

MIN HUMIDITY:

22-32%.

20 FT WINDS:

<u>OUTLOOK FOR TUESDAY:</u> A dry cold front will sweep across the area, bringing cooler temperatures and higher relative humidity. However, gusty southwest winds can be expected ahead of the front with northwest winds behind the front. Peak wind gusts around 35 MPH will be possible across the ridges and upper slopes.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Fire and winds have weakened trees considerably... Carefully Evaluate All Paths of Travel!
- If you can breathe better, so can the fire... Improved Visibility Equals More Active Fire!
- Stronger winds will further stress fire weakened trees... Count on Snags Coming Down!
- Identify unburned islands close to the line... PIG values are up... Spotting is in Play!!!
- Respect any tree torching... Extensive Bug Kill Above 3000' Requires Full Awareness!
- Newly burned areas reset the "hazard clock"... Expect fresh rollout and fire impacted snags!!
- Fire is entrenched in zones of high tree mortality... Dead trees have it all; 1 to 1000 hour fuels!

SPECIFIC:

• All Divisions: All Sizes of Fuels are very DRY, very AVAILABLE, very RECEPTIVE...

Flame Lengths- 2-6 ft. in Grass, Up to 30 ft. in Brush/Understory... Fuels and Wind Driven!

Rate of Spread- Up to 50 chains/hour in Grass, Up to 120 chains/hour in Brush... Wind Driven!

Spotting Distances- Up to a 1/2 mile from Grass/Brush, Up to 2 miles in Timber (From Torching)

Probability of Ignition- (Day) Unshaded Up to 80% - Shaded Up to 50% (Night) Down to <40%

AIR OPERATIONS:

Sunrise: 06:49

Sunset: 18:48

Expect good smoke dispersion after the inversion breaks around noon. Less in the lower elevations. Mixing heights start out at less than 1000 feet; rise to only 3,000 AGL; then returning to less than 1000 feet after sunset. Anticipate terrain induced turbulence in the Tule and Kern River corridors, during the entire wind event.

SAFETY

Todays' Fire Environment is Unforgiving of Lack of Planning!

Brief Your Plan, and the Backup Plan...and a Backup to Your Backup!

Windy Fire - Safety Message

INCIDENT #CA-TIA-003058

DATE:9/27-9/28/2021 TIME: 0600-0600 Day/Night Shift

Act Deliberately, Not Urgently

- When committing personnel to a fire, have a plan. Ensure that your plans are clearly communicated and that
 everyone clearly understands your intent and the hazards that are associated with your plan.
- Do not be afraid to say no. Refer to page 19 in the I.R.P.G. for guidelines on properly refusing risk. Do not act beyond the limits of your training or ability.
- Ensure that escape routes and safety zones are clearly defined and made known to all fire fighters. Post lookouts
 and ensure that you know what radio frequency you will be using for tactics and command. Make sure LCES is in
 place prior to taking action.
- Review the "8-Line," Incident within and Incident plan in your IAP. Spend time during breakout briefings discussing possible scenarios involving an incident within an incident. Know who that on-scene IC will be.

Fire Fighter Fatigue: Please continue to get enough rest. Take plenty of breaks and please continue to stay hydrated by drinking plenty of water. Ensure that all fire fighters meet the 2:1 work to rest ratio. Watch out for signs of fatigue in other fire fighters around you.

Snags/Hazard Trees: Maintain situational awareness and point out snags to others. Snags continue to fall in the burned area and near the fire line. Ensure that everyone is aware of the presence of snags and widow makers. Do not park vehicles under them. Use flagging tape to keep others out of the area.

Covid-19

- Be Smart! Stay Apart! Maintain CDC social distancing guidelines when feasible
- Practice good hygiene. Wash hands often and avoid touching your face
- Cover your nose and mouth with a facial covering and cough into your elbow if needed
- Monitor your health. If you have fever, shortness of breath, coughing, sneezing or any other Covid-19 related symptom, tell a supervisor and maintain physical distancing

Texting While Driving is Prohibited!

- Texting while driving is against California State Law and is enforced by local and state law enforcement agencies.
- 2. 23% of all auto accidents in 2011 were attributed to cellular phone use while driving. Taking your eyes off the road for 5 seconds while traveling 55 MPH, is equivalent to driving the length of 1 football field without looking at the road!

INCIDENT RISK ANALYSIS

ICS (215A) DAY/NIGHT SHIFT

| | INCIDENT RISK ANALISIS | ics (213A) DAT/ Widit Shift | | | | |
|-------|--|---|--|--|--|--|
| BR/DV | HAZARDOUS ACTIONS - CONDITIONS | MITIGATIONS – WARNINGS – REMEDIES | | | | |
| ALL | TRAFFIC HAZARDS AND DRIVING | Many roads are narrow and mid-slope, with soft shoulders. Allow heavy vehicles to pass on uphill side. Use spotters when backing or turning around. Practice "Defensive Driving" techniques. Assume other drivers are fatigued and complacent. Use warning lights when working on roads or traveling in smoke. Drive at or below posted speed limits. Use chock blocks, turn wheels into hill. Be alert for wildlife. Dusk to Dawn pose the greatest potential for accidents. | | | | |
| ALL | HAZARD / DANGER TREES | Follow Hazard Tree Safety Guidelines (IRPG p.22.) Limit number of personnel around snags and their exposure time Fallers must be qualified for the trees being felled. Be alert around hazard trees during wind events, even green trees. The hazard zone extends a minimum of 2½ tree lengths. Avoid parking vehicles or taking breaks under or near hazard trees. | | | | |
| ALL | FIRE BEHAVIOR | Are you seeing what we have predicted? Conduct thorough assessments before starting work. Ensure LCES is in place Plan & communicate your exit strategy with your crew and adjacent resources. Provide additional briefing for new resources and maintain communications. Outflow winds from thunderstorms could negatively affect fire behavior. | | | | |
| ALL | STEEP TERRAIN & ROLLING DEBRIS | Maintain 8'-10' spacing when working & walking. Do not work above any personnel. Evaluate necessity to send personnel in areas with limited access. | | | | |
| ALL | WILDLAND URBAN INTERFACE OPERATIONS | Maintain continuous Situational Awareness based upon the fire environment, observed fire behavior, hazards and incident objectives. Refer to IRPG Page 12-16 for WUI preparation, preplanning, and hazards. Be active and engage in defense preparations & do not wait for the fire to arrive. Beware of unknown chemicals when working near structures or garden plots. Be decisive in tactical engagement. Know when to engage or not. Establish management decision points, Safety Zones, TRA's, and Escape | | | | |
| ALL | FIRING OPERATIONS | Only personnel trained in the use of each devise will be authorized to use firing equipment. Ensure that all personnel are briefed and prepared for firing and holding operations. Ensure that all ground and Ariel ignition plans are approved and signed by the IC prior to implementation | | | | |
| ALL | COMMUNICATIONS | Share your Situational Awareness (hazards, changes, etc.) to those who also have a need. Answer questions when asked by others. Ask for intel when you do not know the plan. Ensure all personnel are familiar with the incident and IA communications plans. | | | | |
| ALL | HEAT RELATED ILLNESS | Drink 2 to 1 water to sports drinks. Take frequent breaks, minimum of 10 minutes every hour. Recognize symptoms of HEAT RELATED ILLNESS which include low energy, cramping, headaches, dizziness, poor rest, poor eating habits, hot skin, and lack of sweating. | | | | |
| ALL | INDIRECT LINE CONSTRUCTION | Establish and maintain LCES. Locate line in favorable location, lighter fuels, and gentler topography when possible. Utilize natural or existing barriers. | | | | |
| ALL | AIR OPERATIONS | Follow "Aviation Watch-Out Situations" on page 46, IRPG. Do not plan on air resources for tactical support or medical transportation. Refer to page 58, IRPG for directing bucket drops. Ensure positive communication with all air resources. | | | | |

The employee or supervisor should contact COMP/CLAIMS as soon as possible or upon arrival at the hospital, whichever is convenient.

For claims there are different forms needed based on the circumstances of the property loss or damage. Please contact COMP UL first to find out which forms are appropriate for your situation, and what additional information might be needed. This will expedite the process.

Unserviceable items must be turned into COMP if you are unable to replace at Supply. If items are lost or damaged on the fire line, the fire suppression module must provide a copy of the module's standard inventory with the documentation of broken or unserviceable items. Giant sequoias are among the world's largest and longest-living trees, reaching 2,500-3,000 years old. They grow naturally **only** on California's Sierra Nevada mountain range. They are fire-adapted and have survived low-intensity fires every 10-15 years which remove fallen branches, leaves, logs and other fuels while promoting seed germination. Historically, fires have rarely killed mature giant sequoias. However, **we now know they are vulnerable to high severity fire.**

AT LEAST 10% of the world's giant sequoias were lost during the Castle Fire last year.

THANK YOU FOR PROTECTING THE GIANT SEQUOIA GROVES!

Use these BMP's to help protect the big trees:

- Think of protecting old growth sequoias like a structure.
- Remove surface and ladder fuels from under sequoias. Remove nonsequoia conifers up to 16" diameter. Scatter or chip fuel away from sequoias.
- Scrape duff and fuel from around sequoias, prioritize clearing out cat faces and old fire scars.

Protecting the Sequoia Groves is the #1 Resource Priority
