FORECAST FOR ZACA AIR OPERATIONS

.DISCUSSION ...

Marine layer around 2000 feet deep, but stratus layer expected to break up earlier, around 0800 PDT. A moderate inversion 4100 feet in the morning will lift to 6000 feet by midday. Smoke will be trapped below these elevations. This inversion expected to erode during the afternoon...but will redevelop near 6000 feet towards sunset and lower back to 4000 feet overnight. Scattered

Altostratus/Altocumulus clouds will be present at or above 15,000 ft MSL throughout the day Outlook for Friday night through Sunday...deepening marine layer may bring stratus clouds to elevations between 2000 and 4000 feet during the evening through mid morning hours, while reduced visibility in haze and smoke is likely during late morning through early afternoon hours.

FIRE BEHAVIOR FORECAST

TYPE OF FIRE: SURFACE

TIME ISSUED: 2100

SIGNED: David Kerr

OPERATIONAL PERIOD: 8/2/2007

FORECAST NUMBER: 29

FIRE NAME: ZACA DATE ISSUED: 8/1/07

UNIT: SANTA BARBARA COUNTY/LOS PADRES NF

UNIT. SANTA BARBARA

INPUTS

WEATHER SUMMARY: A southeast flow will bring high level clouds over the incident today with a little cooling associated with them. Humidity will show little change from yesterday. SEE ATTACHED INCIDENT METEOROLOGIST WEATHER FORECAST.

PROBABILITY OF IGNITION = 87% (calculated), down 13 from 8/1/07 Live Fuel Moistures are 51% at Upper Oso (Los Prietos). Sample date July 15, 2007

FIRE BEHAVIOR

GENERAL: The level of the inversion has greatly affected the type of fire and the timing of fire activity. Areas of the fire above the inversion (4,000 feet) will be active early. As the inversion lifts during the late morning/early afternoon a weak "cap" will be placed on the fire retarding activity through the afternoon. The northerly/downslope flow will develop again tonight and a late afternoon early evening increase in fire activity should be expected.

SPECIFIC

BRANCH IV: Division J – The fire retains significant heat in the heavy fuels along the trail and will continue to move laterally along the main ridge. Fire down low in the West Fork of Santa Cruz Creek will continue to move laterally into a series of north/south running drainages and make runs at the main ridge throughout the shift. This should begin early in the shift as the Basin Ridge will be above the local inversion. Expect group torching and short range spotting as a result of these runs.

Division T – The fire is working its way south down Blacks Cyn towards the confluence of Coche Creek and the main Santa Cruz Creek. Rapid upslope runs will occur when the fire crosses any drainage and aligns with the slope. The fire still has one more slope to back down before reaching the dozer line off of Santa Cruz Peak. Any firing in Division T will be on a generally south facing aspect under very warm and dry conditions. Grazed grasslands may not support fire spread, but all brush fuels will burn actively when in alignment with the slope. The winds may battle in this division as a light S/SW upslope wind competes with the general northerly flow over the fire

Division S - The "head" of the fire is approaching a series of north/south running drainages which should burn out early in the afternoon and spread fire north towards Mission Pine Basin. A critical point ahead of the fire is Coche Creek, which is a well defined drainage and will result in significant fire activity today.

AIR OPERATIONS: Expect burn-off of the marine influence at Rancho and Live Oak helibases by 0900.

SAFETY

- The brush/timber fuel mix along Mission Basin Ridge will support large scale group torching and short range spotting. The fuelbed is very receptive to spots, but most spotting has been less than 1/8 mile.
- Watch for slope reversals and strong upslope runs as the fire repositions in Santa Cruz & Blacks Cyns.

HEALTH AND SAFETY MESSAGE Safety starts with You! "MAKE SOUND AND TIMELY DECISIONS"

INCIDENT: ZACA

DATE: August 2, 2007 0600-0600

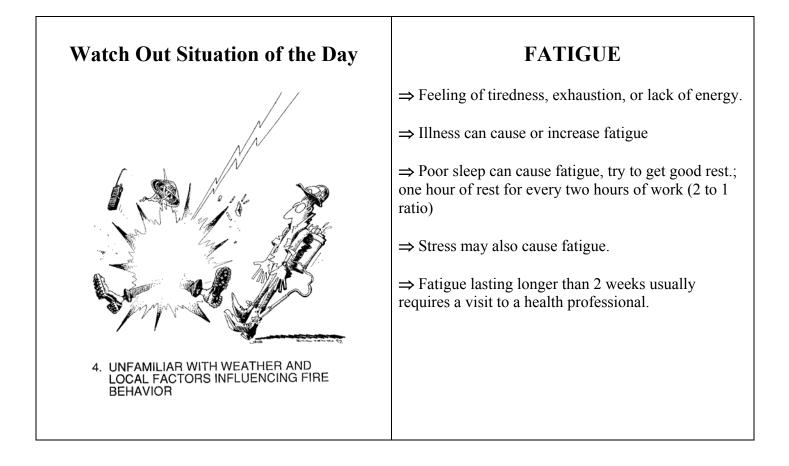

Major Hazards and Risks: Fatigue, Smoke and ATV's, Gators and Golf Carts.

<u>Narrative</u>:

Exposure to smoke during fire operations can be a significant safety concern. Safety is of utmost importance. Where ever possible try to minimize exposure to smoke in your work environment. Monitor your crews' level of fatigue.

Be alert to ATV's, Gators, and Golf Carts while driving in and to camp. All vehicles are required to obey all posted speed limits.

AS ALWAYS, hydrate early and often. Start at your wake up in the morning and continue through when you bed down.

INCIDENT SAFETY OFFICERS: Rick Joyner, Tom Johnston
