Fire Behavior Forecast Number 60

Name of Fire: Zaca II Prediction For: Sunday Location: Los Padres NF 9/02/07 0600 – 2000 hrs

Date/ Time Forecast Issued: 9/01/07 2000 hrs Drew Smith- FBAN/So.Cal Team 1

Weather

Mostly sunny in the morning becoming partly cloudy with a slight chance of showers and T-Storms in the afternoon. *Isolated Dry Lightning is Possible*. Temperature around 105, RH =13-23%, Eye level winds= Variable3-6 mph. **Becoming** Upslope / Up valley by afternoon 4-8 mph. Ridgetop Winds: North to Northeast 3-6 mph with gusts to 15.

Variable gusty winds may accompany thunderstorms producing gusts 15-25 mph. LAL=2

Fire Behavior:

General:

The fire has been in-active near control lines. Hard work by crews and excellent mop up standards have maintained the current fire perimeter. Several deep interior islands continue to produce smokes in heavy down fuels and snags. Poor night recoveries have kept these smokes alive.

Live fuel moisture = 50%- 60%.

Burn Index = 100. **Fire Danger Index**= Very High **PBI**= 90%

Specific:

Interior Islands will continue to produce smoke in heavy fuels. With the Very High Fire Danger Index today, an isolated headfire run may develop by early afternoon. Flame lengths of 30-50 feet can be anticipated. The smokes that were identified near H27 and three sisters pose no threat to the line.

Initial Attack (SITUATIONAL AWARENESS)

Head fire will not be conducive to direct attack. Safe engagement practices must be identified on the observed and predicted fire behavior. Any new starts will have a very high potential for large fire development. With T-Storm development near any fire, erratic fire behavior may be encountered.

Air Operations:

Gusty winds and thunderstorm development may hinder aircraft use. Regional activity may limit aircraft use.

Safety:

- Observe the fire behavior for fire suppression engagement
- A new start may develop more abrupt than anticipated
- Identify a solid anchor point and safety zones.
- Situational Awareness needs to be a top priority= Safety

- Working with and around heavy equipment during rehab.
- Cumulative Fatigue and dehydration in hot weather.
- Driving vehicles too fast on narrow roads with blind corners.
- If using chippers ... Use Job Hazard Analysis to brief crews. Sign and keep it on site.
- If building fence...Use Job Hazard Analysis to brief crews. Sign and keep it on site.

Narrative:

The Safety Officers would like to thank you for a great safety record yesterday (9/1). We appreciated everyone listening to our safety message about managing your personnel with an appropriate pace for the situation. Do the same thing today...develop a good pace, rotate the work, rehab yourselves in the shade when possible. Monitor your crews and yourself on a continuous basis.

Race Today:

If working or driving on East Camino Cielo, there will be a half marathon race on that road that finishes at La Cumbre Peak. Safety Officers and Security will monitor the road that is affected by the race; it is only about 1.5 miles long. Safety Officers will lead fire vehicles through the race area. Runners are supposed to stay to the right side of the road.

Human Resources

Chuck Sandau Dana Simpson

Just as accident rates tend to increase at this juncture of a large incident, so do human resource contacts and complaints of inappropriate behavior, harassment, and discrimination.

- the fire is winding down
- people are fatigued and ready to go home (yay!...demob)
- people are more easily irritated
- people have more time to thing about things that upset them

Be aware of this tendency and make the necessary effort to recognize and deal with situations before they get out of control and become conflicts.

As a result of your efforts thus far, there have been no major conflicts on this incident. The IC team appreciates your cooperation.

<u>Think before you speak</u> – Dan Quayle, former Vice President, - "I love California; I practically grew up in Phoenix."
