\* Building cluster points approximate the location of one or more structures. Most building cluster points represent the center of parcels where county assessor records indicate taxable improvements are present, but may also represent structure point locations identified by county officials. Location accuracy of cluster points decreases with large parcel areas.

NOTE: Recreation residences and special use structures data are not available from USFS and are not included in building cluster points data, nor are they identified or analyzed in this report.

NOTE: Mines may pose a threat to fire fighter safety.

CAUTION: Defer to air photos or local knowledge for exact structure and other feature locations. Building cluster points are intended for STRATEGIC USE ONLY.
