Comments /notes on tonight's mission and this interpretation: Fire is located in the Sawtooth National Forest in the headwaters of Grape Creek. It is bounded on the north by the ridge overlooking Independence Lakes. Cache Peak is to the west and Thunder Mountain is to the south. Intense heat was detected throughout with the exception of the eastern side of Grape Creek. This area may already have burned. Isolated heat sources were detected outside the perimeter to the north. An isolated heat source was detected 7.75 miles east of the fire at the headwaters of Parks Creek. It is not shown on the map but is in the shapefile.
