| <b>Comments /notes on tonight's mission and this interpretation:</b><br>Fire is located in the Sawtooth National Forest in the headwaters of Grape Creek. It is bounded on the north by the ridge overlooking Independence Lakes. Cache Peak is to the west and Thunder Mountain is to the south. Areas of scattered heat were detected along both forks of the northern perimeter and this accounts for most of the growth in the perimeter since the last IR flight. Isolated heat sources were detected outside the perimeter to the north. The furthest outside the perimeter is approximately ¼ mile, adjacent to Green Creek. |  |   |   |
