Comments /notes on tonight's mission and this interpretation: <ul style="list-style-type: none"> Started with 08/27/2016 new incident fire perimeter that SITL instructed me to start with. This caused a reduction in 278 acres from the previous incident perimeter and IR interpretations. A few isolated heat sources and pockets of intense heat within the current heat perimeter on the north side of the fire. Minor heat growth on south fire perimeter in sections 35 and 36 south of Tie Canyon. A couple of new small heat polygons outside of main fire perimeter on south side of fire – one in section 34, one in section 35 and one in section 36.
