<b>Comments /notes on tonight's mission and this interpretation:</b>			
<p>The IR Tech was only able to get one run on the very southern edge of the fire due to weather so interpretation was limited to the southern 10-20% of the fire.</p> <p>The heat perimeter on the southern flank did have one area of expansion in Section 9 near Timber Canyon. The expansion zone had intense heat with adjacent scattered heat. There was one other small zone of scattered heat near upper Pine Hollow and some additional interior isolated heat along a large portion of the southern flank.</p>
