Comments /notes on tonight's mission and this interpretation:

I began mapping from the previous IR heat perimeter of 7/6/2018. There was only one area of heat perimeter expansion -- in the southeastern flank. There was a small pocket of intense heat in the expansion zone as well as scattered heat adjacent to it.

The remainder of the interior of the fire had some isolated heat and one other pocket of scattered heat.

There was one exterior isolated heat approximately one mile east of the eastern flank.
