Date and Time Imagery Received by Interpreter: 10/16/2019 – 2255 (MDT)		Type of media for final product: Shape files, KMZ, PDF, and IRIN Log	
Date and Time Products Delivered to Incident: 10/17/2019 – 0120 (MDT)		Digital files sent to: NIFC FTP @ /incident_specific_data/great_basin/2019_Incidents/2019_CarrieCreek/IR/20191017	
Comments /notes on tonight's mission and this interpretation: There was no perimeter to start from. There are two distinct areas of intense heat. Scattered between these are a few isolated heat sources, and several potential isolated heat sources. The larger of the intense heat polygons is on the ridge between Grindstone Creek and Carrie Creek, with the southern extent approaching Carrie Creek. The smaller of the two intense heat polygons is in an unnamed stream drainage which drains into Grindstone Creek. End – 21 Acres Start – 0 Acres Growth – 21 Acres Questions, comments, please contact the IR interpreter via the info above.
